b) A function that defines the characteristics and method of transmitting and receiving data through a wireless medium between two or more STAs. Depending on the PPDU format, these STAs support a mixture of NGV and Clause 17 (Orthogonal frequency division multiplexing (OFDM) PHY specification) PHYs.

### 32.1.3 NGV PHY functions

#### 32.1.3.1 General

The NGV PHY contains two functional entities: the PHY function, and the physical layer management function (via the PLME). These functions are described in detail in 32.3 (NGV PHY) and 32.4 (NGV PLME), respectively. The NGV PHY service is provided to the MAC through the PHY service primitives defined in Clause 8 (PHY service specification). The NGV PHY service interface is described in 32.2 (NGV PHY service interface).

#### 32.1.3.2 PHY layer management entity (PLME)

The PLME performs management of the local PHY functions in conjunction with the MLME.

#### 32.1.3.3 Service specification method

The models represented by figures and state diagrams are intended to be illustrations of the functions provided. It is important to distinguish between a model and a real implementation. The models are optimized for simplicity and clarity of presentation.

The service of a layer is the set of capabilities that it offers to a user in the next higher layer. Abstract services are specified here by describing the service primitives and parameters that characterize each service. This definition is independent of any particular implementation.

### 32.1.4 PPDU Formats

The structure of the PPDU transmitted by an NGV STA is determined by the TXVECTOR parameters as defined in Table 32-1 (TXVECTOR and RXVECTOR parameters(11bd)).

In an NGV STA the FORMAT parameter determines the overall structure of the PPDU and can take one of the following values:

— Non-NGV format of 10 MHz bandwidth (NON_NGV_10), for the PPDU format as specified in Clause 17 (Orthogonal frequency division multiplexing (OFDM) PHY specification) for 10 MHz channel spacing including non-NGV duplicate format.

— NGV format (NGV), for the PPDU format as specified in Clause 32 (Next Generation V2X (NGV) PHY specification(11bd)).

NOTE—Required support for these formats is defined in 17.1 (Introduction) and 32.1.1 (Introduction to NGV PHY).

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

## 32.2 NGV PHY service interface

### 32.2.1 Introduction

The PHY provides an interface to the MAC through an extension of the generic PHY service interface defined in 8.3.4 (Basic service and options). The interface includes TXVECTOR, RXVECTOR, and PHYCONFIG_VECTOR.

The MAC uses the TXVECTOR to supply the PHY with per-PPDU transmit parameters. The PHY uses the RXVECTOR to inform the MAC of the received PPDU parameters. The MAC uses the PHYCONFIG_VECTOR to configure the PHY for operation that is independent of frame transmission or reception.

### 32.2.2 TXVECTOR and RXVECTOR

The parameters in Table 32-1 (TXVECTOR and RXVECTOR parameters(11bd)) are defined as part of the TXVECTOR parameter list in the PHY-TXSTART.request primitive and/or as part of the RXVECTOR parameter list in the PHY-RXSTART.indication primitives.

**Table 32-1—TXVECTOR and RXVECTOR parameters(11bd)**

| Parameter | Condition | Value | TXVECTOR | RXVECTOR |
|---|---|---|---|---|
| FORMAT | | Determines the format of the PPDU.<br>Enumerated type:<br>NON_NGV_10 indicates the PPDU format for 10 MHz channel spacing as defined in Clause 17 (Orthogonal frequency division multiplexing (OFDM) PHY specification) or non-NGV duplicate PPDU format as defined in 32.3.9.10 (Non-NGV duplicate transmission).<br>NGV indicates NGV PPDU format as defined in Clause 32 (Next Generation V2X (NGV) PHY specification(11bd)). | Y | Y |
| L_LENGTH | FORMAT is NGV | Not present.<br>NOTE—The value of the Length field of the L-SIG in an NGV PPDU is calculated as in Equation (32-8). | N | N |
| | Otherwise | Indicates the length of the PSDU in octets in the range 1 to 4095. The value is used by the PHY to determine the number of octet transfers that occur between the MAC and the PHY. | Y | Y |
| L_DATARATE | FORMAT is NGV | Not present.<br>NOTE—The RATE field in the L-SIG field in an NGV PPDU is set to the value representing 3 Mb/s in the 10 MHz channel spacing column of Table 17-6 (Contents of the SIGNAL field). | N | N |
| | Otherwise | Indicates the rate, in Mb/s, used to transmit the PSDU.<br>See corresponding entry in Table 17-1 (TXVECTOR parameters) and Table 17-2 (RXVECTOR parameters). | Y | Y |

**Table 32-1—TXVECTOR and RXVECTOR parameters(11bd) *(continued)***

| Parameter | Condition | Value | TXVECTOR | RXVECTOR |
|---|---|---|---|---|
| SERVICE | FORMAT is NGV | Not present. | N | N |
| | Otherwise | Scrambler initialization, null. | Y | N |
| TXPWR_LEVEL_INDEX | FORMAT is NGV | The allowed values for the TXPWR_LEVEL_INDEX parameter are in the range 1 to *N*/2, where *N* is the number of octets in dot11TxPowerLevelExtended. This parameter is used to indicate the available transmit output power levels defined in dot11TxPowerLevelExtended that shall be used for the current transmission. | Y | N |
| | Otherwise | 1–8<br><br>Refer to 17.2.2 (TXVECTOR parameters(#1369)) for the definition of TXPWR_LEVEL_INDEX. | Y | N |
| RSSI | FORMAT is NGV | The allowed values for the RSSI parameter are in the range 0 to 255. This parameter is a measure by the PHY of the power observed at the antenna connector used to receive the current PPDU measured during the reception of the NGV-LTF field. RSSI is intended to be used in a relative manner, and it shall be a monotonically increasing function of the received power. | N | Y |
| | Otherwise | 0–RSSI maximum.<br><br>See 17.2.3 (RXVECTOR parameters(#1369)) for the definition of RSSI. | N | Y |
| NGV-MCS | FORMAT is NGV | Indicates the modulation and coding scheme used in the transmission of the PPDU.<br>Integer in the range:<br>0 to 8 and 15 for 10 MHz PPDU.<br>0 to 9 and 15 for 20 MHz PPDU.<br><br>NOTE—Set to 0 for NGV ranging NDP. See 32.3.16 (NGV ranging NDP) | Y | Y |
| | Otherwise | Not present. | N | N |
| CH_BANDWIDTH | FORMAT is NGV | Indicates the channel width of the transmitted PPDU.<br><br>Enumerated type:<br>CBW10 for 10 MHz.<br>CBW20 for 20 MHz. | Y | Y |
| | Otherwise | Not present. | N | N |

This is an unapproved IEEE Standards Draft, subject to change.

**Table 32-1—TXVECTOR and RXVECTOR parameters(11bd) *(continued)***

| Parameter | Condition | Value | TXVECTOR | RXVECTOR |
|---|---|---|---|---|
| CH_BANDWIDTH_IN_NON_NGV | FORMAT is NON_NGV_10 | In the TXVECTOR, if present, indicates the channel width of the transmitted PPDU, which is signaled via the scrambling sequence.<br><br>In the RXVECTOR, if valid, indicates the channel width of the received PPDU, which is signaled via the scrambling sequence.<br><br>Enumerated type:<br>CBW10, CBW20.<br><br>NOTE—In the RXVECTOR, the validity of this parameter is determined by the MAC based on the contents of the currently received MPDU (e.g., RTS) or the previous MPDU in an exchange (e.g., RTS preceding a CTS). | O | Y |
| | Otherwise | Not present. | N | N |
| TIME_OF_DEPARTURE_REQUESTED | Enumerated type:<br>true indicates that the MAC entity requests that the PHY entity measures and reports time of departure parameters corresponding to the time when the first frame energy is sent by the transmitting port. false indicates that the MAC entity requests that the PHY entity neither measures nor reports time of departure parameters. | | O | N |
| LTF_REP | FORMAT is NGV and APEP_LENGTH is 0 | Indicates the number of repetitions of the NGV-LTF symbols. Set to the number of repetitions. | O | N |
| | Otherwise | Not present. | N | N |

NOTE—In the "TXVECTOR" and "RXVECTOR" columns, the following apply:
Y = Present;
N = Not present;
O = Optional.

### 32.2.3 PHY CONFIG_VECTOR

The PHYCONFIG_VECTOR carried in a PHY-CONFIG.request primitive for the NGV PHY contains an OPERATING_CHANNEL parameter, which identifies the operating or primary channel. The PHY shall set dot11CurrentPrimaryChannel to the value of parameter OPERATING_CHANNEL.

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

The PHYCONFIG_VECTOR carried in a PHY-CONFIG.request primitive for the NGV PHY contains a SECONDARY_CHANNEL_OFFSET parameter, which takes one of the following values:

— SECONDARY_CHANNEL_NONE if no secondary channel is present; in this case the PHY shall set dot11CurrentSecondaryChannel to 0.

— SECONDARY_CHANNEL_ABOVE if the channel number of the secondary channel is greater than the channel number of the primary channel; in this case the PHY shall set dot11CurrentSecondaryChannel to dot11CurrentPrimaryChannel + 2.

— SECONDARY_CHANNEL_BELOW if the channel number of the secondary channel is smaller than the channel number of the primary channel; in this case the PHY shall set dot11CurrentSecondaryChannel to dot11CurrentPrimaryChannel – 2.

### 32.2.4 Effects of CH_BANDWIDTH parameter on PPDU format

Table 32-2 (Interpretation of FORMAT, NON_NGV_MODULATION, and CH_BANDWIDTH parameters(11bd)) shows the valid combinations of the FORMAT, NON_NGV_MODULATION, and CH_BANDWIDTH parameters and the corresponding PPDU format.

**Table 32-2— Interpretation of FORMAT, NON_NGV_MODULATION, and CH_BANDWIDTH parameters(11bd)**

| FORMAT | NON_NGV_MODULATION | CH_BANDWIDTH | PPDU format |
|---|---|---|---|
| NGV | N/A | CBW10 | The STA transmits an NGV PPDU of 10 MHz bandwidth. |
| NGV | N/A | CBW20 | The STA transmits an NGV PPDU of 20 MHz bandwidth. |
| NON_NGV_10 | OFDM | N/A | The STA transmits a non-NGV PPDU of 10 MHz bandwidth. |
| NON_NGV_10 | NON_NGV_10_DUP_OFDM | N/A | The STA transmits a NON_NGV_10 PPDU with NON_NGV_MODULATION set to NON_NGV_10_DUP_OFDM using two adjacent 10 MHz channels as defined in 32.3.9.10 (Non-NGV duplicate transmission). The 10 MHz channel higher in frequency is rotated +90º relative to the 10 MHz channel lower in frequency as defined in Equation (32-5). |

### 32.2.5 Support for NON_NGV format

#### 32.2.5.1 General

An NGV STA logically contains Clause 17 (Orthogonal frequency division multiplexing (OFDM) PHY specification) and Clause 32 (Next Generation V2X (NGV) PHY specification(11bd)) PHYs. The MAC interfaces to the PHYs via the Clause 17 (Orthogonal frequency division multiplexing (OFDM) PHY specification) and Clause 32 (Next Generation V2X (NGV) PHY specification(11bd)) PHY service interfaces as shown in Figure 32-1 (PHY interaction on transmit for various PPDU formats(11bd)), Figure 32-2 (PHY interaction on receive for various PPDU formats(11bd)), and Clause 32 (Next Generation V2X (NGV) PHY specification(11bd)).

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

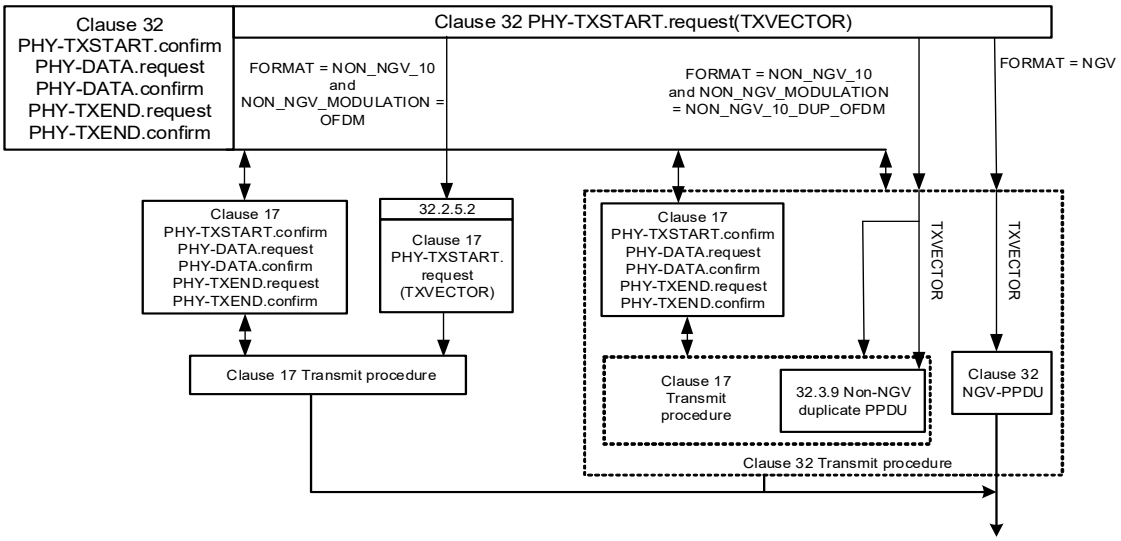

**Figure 32-1—PHY interaction on transmit for various PPDU formats(11bd)**

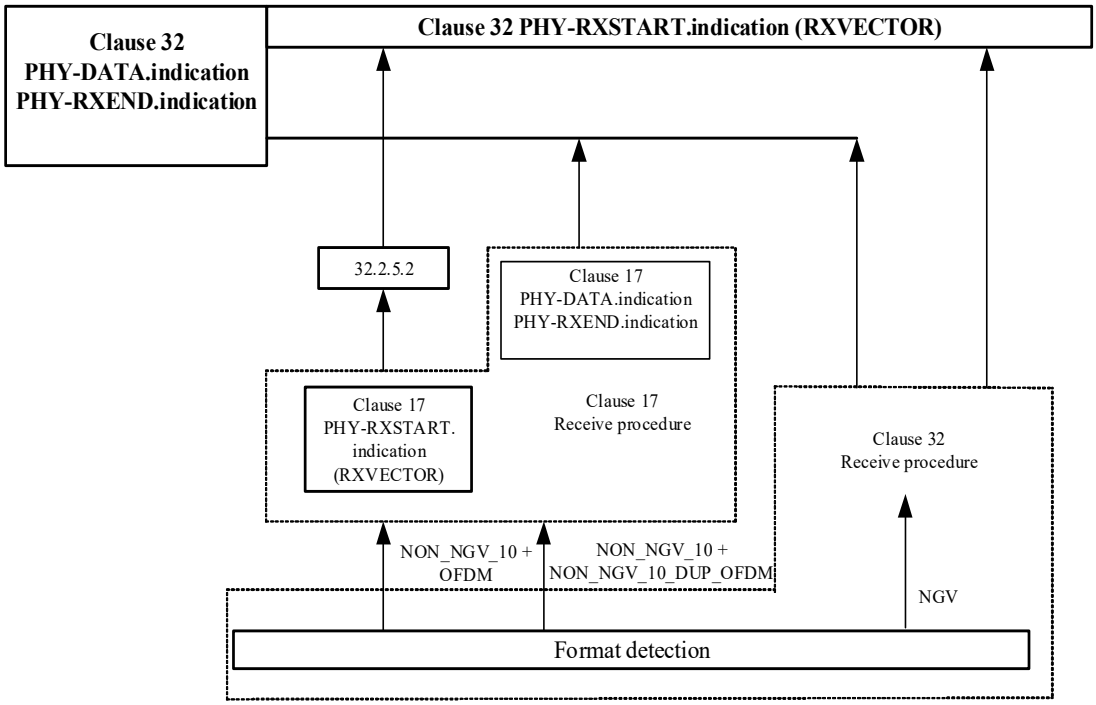

**Figure 32-2—PHY interaction on receive for various PPDU formats(11bd)**

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

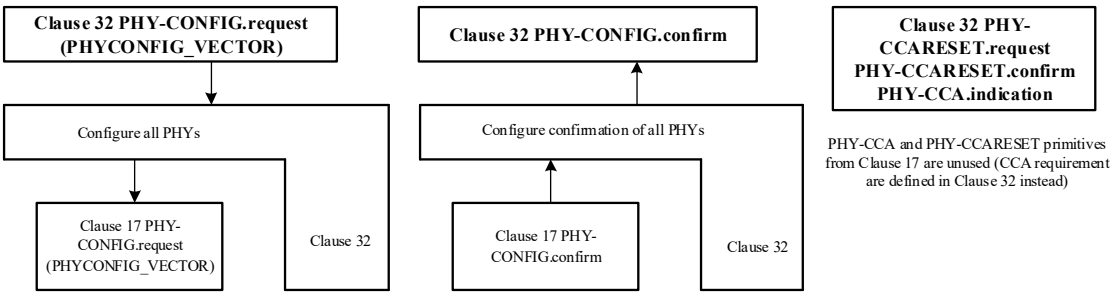

**Figure 32-3—PHY-CONFIG and CCA interaction with Clause 17 (Orthogonal frequency division multiplexing (OFDM) PHY specification) and Clause 32 (Next Generation V2X (NGV) PHY specification(11bd))(11bd)**

When a PHY-TXSTART.request(TXVECTOR) primitive with the FORMAT parameter equal to NON_NGV_10 is issued, the behavior of the NGV PHY is defined in Clause 17 (Orthogonal frequency division multiplexing (OFDM) PHY specification) with additional requirements described in the following subclauses:

— 32.3.11.1 (Transmit spectrum mask) instead of 17.3.9.3 (Transmit spectrum mask)

— 32.3.11.4.2 (Transmitter center frequency leakage) instead of 17.3.9.7.2 (Transmitter center frequency leakage)

where the Clause 32 (Next Generation V2X (NGV) PHY specification(11bd)) TXVECTOR parameters in Table 32-1 (TXVECTOR and RXVECTOR parameters(11bd)) are mapped to Clause 17 (Orthogonal frequency division multiplexing (OFDM) PHY specification) TXVECTOR parameters in Table 17-1 (TXVECTOR parameters) according to Table 32-3 (Mapping of the NGV PHY parameters for non-NGV operation(11bd)).

When the NGV PHY receives a Clause 32 (Next Generation V2X (NGV) PHY specification(11bd)) PHY-CONFIG.request(PHYCONFIG_VECTOR) primitive, the NGV PHY shall, for the purpose of OFDM PPDU transmission and reception, behave as if it were a Clause 17 (Orthogonal frequency division multiplexing (OFDM) PHY specification) PHY that had received a PHY-CONFIG.request(PHYCONFIG_VECTOR) primitive but with the SECONDARY_CHANNEL_OFFSET parameter discarded from PHYCONFIG_VECTOR.

As defined in 32.3.14 (NGV receive procedure), once a PPDU is received and detected as a non-NGV PPDU, the behavior of the NGV PHY is defined in Clause 17 (Orthogonal frequency division multiplexing (OFDM) PHY specification). The RXVECTOR parameters from the Clause 17 (Orthogonal frequency division multiplexing (OFDM) PHY specification) PHY-RXSTART.indication primitive are mapped to the Clause 32 (Next Generation V2X (NGV) PHY specification(11bd)) RXVECTOR parameters as defined in Table 32-3 (Mapping of the NGV PHY parameters for non-NGV operation(11bd)). NGV PHY parameters not listed in the table are not present.

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

**Table 32-3—Mapping of the NGV PHY parameters for non-NGV operation(11bd)**

| NGV parameters | 5.9 GHz operation defined by Clause 17 (Orthogonal frequency division multiplexing (OFDM) PHY specification) | Parameter list |
|---|---|---|
| L_LENGTH | L_LENGTH | TXVECTOR/RXVECTOR |
| L_DATARATE | L_DATARATE | TXVECTOR/RXVECTOR |
| TXPWR_LEVEL_INDEX | TXPWR_LEVEL_INDEX | TXVECTOR |
| RSSI | RSSI | RXVECTOR |
| SERVICE | SERVICE | TXVECTOR/RXVECTOR |
| OPERATING_CHANNEL | OPERATING_CHANNEL | PHYCONFIG_VECTOR |
| SECONDARY_CHANNEL_OFFSET | Discarded | PHYCONFIG_VECTOR |

### 32.2.5.2 Repetition transmission of NON_NGV_10 PPDU

NGV STA shall support NON_NGV_10 PPDU repetition transmission mode. When a PHY-TXSTART.request(TXVECTOR) primitive with the FORMAT parameter equal to NON_NGV_10 and N_PPDU_REP being nonzero, the NON_NGV_10 repetition transmission mode shall be used by the PHY layer.

In this mode, the NON_NGV_10 PPDU is transmitted 1 + N_PPDU_REP times in sequence, where N_PPDU_REP is the number of repetitions following the first transmission, and N_PPDU_REP is indicated through TXVECTOR.

The time separation between every two repeated transmissions is indicated by parameter *aSIFSTime* (see Table 32-20 (NGV PHY characteristics(11bd))), as illustrated in Figure 32-4 (Example of NON_NGV_10 repetition transmission with N_PPDU_REP = 2(11bd)).

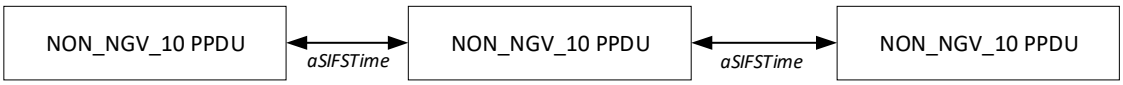

**Figure 32-4—Example of NON_NGV_10 repetition transmission with N_PPDU_REP = 2(11bd)**

NOTE—All the following N_PPDU_REP repetition PPDUs use the same scrambler as the first NON_NGV_10 PPDU.

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

#### 32.2.5.3 TXSTATUS parameters

The parameters listed in Table 32-4 (TXSTATUS parameters(11bd)) are defined as part of the TXSTATUS parameter list in the PHY-TXSTART.confirm(TXSTATUS) service primitive.

**Table 32-4—TXSTATUS parameters(11bd)**

| Parameter | Value |
|---|---|
| TIME_OF_DEPARTURE | 0 to $2^{32}$ – 1. The locally measured time when the first frame energy is sent by the transmitting port, in units equal to 1/ TIME_OF_DEPARTURE_ClockRate. This parameter is present only if TIME_OF_DEPARTURE_REQUESTED is true in the corresponding request. |
| TIME_OF_DEPARTURE_ClockRate | 0 to $2^{16}$ – 1. The clock rate, in units of MHz, is used to generate the TIME_OF_DEPARTURE value. This parameter is present only if TIME_OF_DEPARTURE_REQUESTED is true in the corresponding request. |
| TX_START_OF_FRAME_OFFSET | 0 to $2^{32}$ – 1. An estimate of the offset (in 10 ns(#7198) units) from the point in time at which the start of the preamble corresponding to the frame was transmitted at the transmit antenna connector to the point in time at which this primitive is issued to the MAC. |

## 32.3 NGV PHY

### 32.3.1 Introduction

This subclause provides the procedure by which PSDUs are converted to and from transmissions on the wireless medium.

During transmission, a single PSDU is processed and appended to the NGV PHY preamble including L-STF, L-LTF, L-SIG, RL-SIG, NGV-SIG, RNGV-SIG, NGV-STF, and NGV-LTF fields to create the NGV PPDU. At the receivers, the PHY preamble is processed to aid in the detection, demodulation, and delivery of the PSDU.

### 32.3.2 NGV PPDU format

A single PPDU format is defined for this PHY: the NGV PPDU format. The format of NGV PPDU is defined in Figure 32-5 (NGV PPDU format(11bd)).

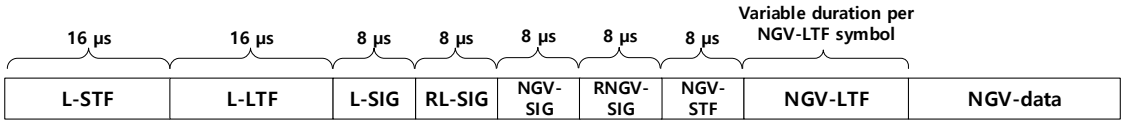

**Figure 32-5—NGV PPDU format(11bd)**

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

The fields of the NGV PPDU format are summarized in Table 32-5 (Fields of the NGV PPDU(11bd)).

**Table 32-5—Fields of the NGV PPDU(11bd)**

| Field | Description |
|---|---|
| L-STF | Non-HT Short Training field |
| L-LTF | Non-HT Long Training field |
| L-SIG | Non-HT SIGNAL field |
| RL-SIG | Repeated Non-HT SIGNAL field |
| NGV-SIG | NGV Signal field |
| RNGV-SIG | Repeated NGV Signal field |
| NGV-STF | NGV Short Training field |
| NGV-LTF | NGV Long Training field |
| Data | The Data field carrying the PSDU(s) |

The RL-SIG, NGV-SIG, RNGV-SIG, NGV-STF, and NGV-LTF fields are present only in NGV PPDU formats. The RNGV-SIG field is equal to NGV-SIG field. The fields present in a non-NGV PPDU are the L-STF, L-LTF, L-SIG, and Data fields. The number of symbols in the NGV-LTF field, $N_{\text{NGV-LTF}}$, can be 1, 2, or 4 and is determined by the total number of spatial streams being transmitted in the NGV PPDU and whether the NGV-LTF is repeated in NGV ranging NDP (see Table 32-11 (Number of NGV-LTFs required for different numbers of spatial streams(11bd))).

### 32.3.3 Transmitter block diagram

The generation of each field in an NGV PPDU uses many of the following blocks:

a) PHY padding
b) Scrambler
c) FEC (BCC or LDPC) encoders
d) Stream parser
e) BCC interleaver
f) Constellation mapper
g) Pilot insertion
h) Replication over two 10 MHz channels (for BW = 20 MHz)
i) CSD per spatial stream insertion
j) Spatial mapper
k) IDFT
l) CSD per chain insertion
m) GI insertion
n) Windowing

This is an unapproved IEEE Standards Draft, subject to change.

Figure 32-6 (Transmitter block diagram for the L-SIG, RL-SIG, NGV-SIG, and RNGV-SIG fields for an NGV PPDU(11bd)) and Figure 32-7 (Transmitter block diagram for the Data field of an NGV transmission(11bd)) show example transmitter block diagrams. The actual structure of the transmitter is implementation dependent.

In particular, Figure 32-6 (Transmitter block diagram for the L-SIG, RL-SIG, NGV-SIG, and RNGV-SIG fields for an NGV PPDU(11bd)) shows the transmit process for the L-SIG, RL-SIG, NGV-SIG, and RNGV-SIG fields of an NGV PPDU. The BCC encoder and interleaver are not used when generating the L-STF and L-LTF fields. The same BCC interleaver is applied to both the NGV-SIG field and the RNGV-SIG field such that the baseband signals of the NGV-SIG field symbol and the RNGV-SIG field symbol are exactly the same.

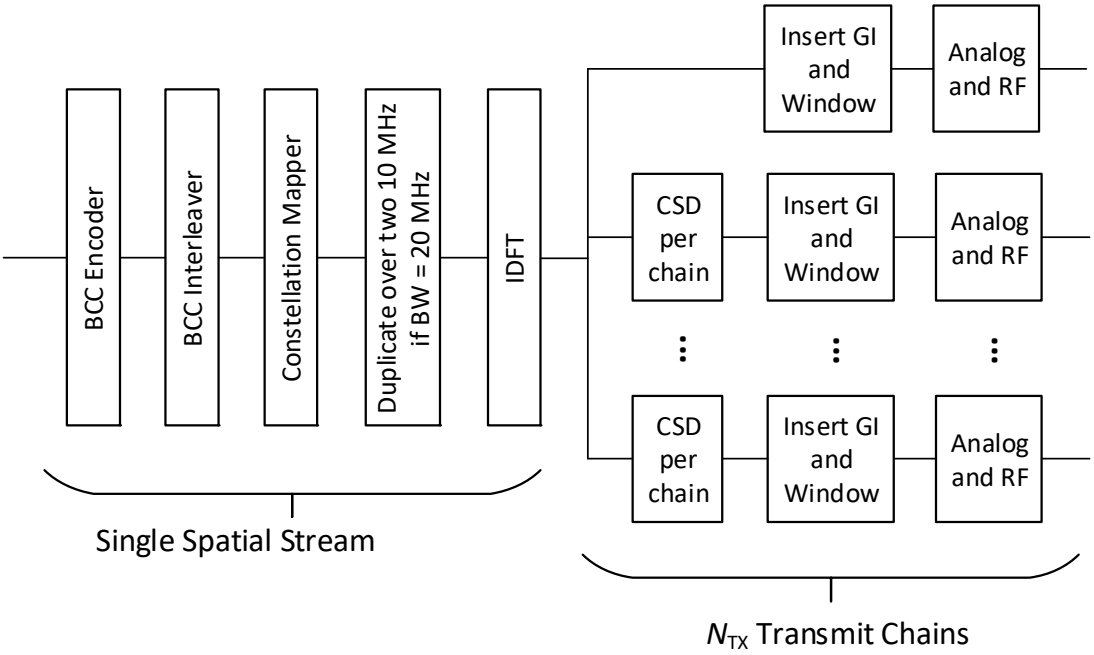

**Figure 32-6—Transmitter block diagram for the L-SIG, RL-SIG, NGV-SIG, and RNGV-SIG fields for an NGV PPDU(11bd)**

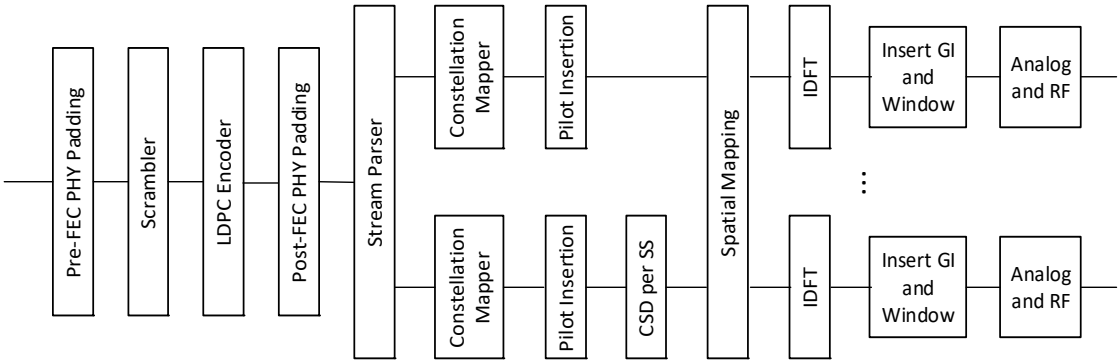
Figure 32-7 (Transmitter block diagram for the Data field of an NGV transmission(11bd)) shows the transmitter blocks used to generate the Data field of an NGV transmission. The BPSK-DCM tone mapping,

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

which is part of the constellation mapper block, is applied only if BPSK-DCM is indicated by NGV-MCS field value 15 in NGV-SIG field.



NOTE—Transmission with two spatial streams is optional.

**Figure 32-7—Transmitter block diagram for the Data field of an NGV transmission(11bd)**

### 32.3.4 Overview of the PPDU encoding process

#### 32.3.4.1 General

This subclause provides an overview of the NGV PPDU encoding process.

#### 32.3.4.2 Construction of L-STF

Construct the L-STF field as defined in 32.3.8.3 (L-STF definition) with the following highlights:

a) Determine the CH_BANDWIDTH from the TXVECTOR.

b) Sequence generation: Generate the L-STF sequence over the CH_BANDWIDTH as described in 32.3.8.3 (L-STF definition).

c) Phase rotation: Apply appropriate phase rotation for each 10 MHz subchannel as described in 32.3.7.3 (Transmitted signal) and 32.3.7.4 (Definition of tone rotation).

d) IDFT: Compute the inverse discrete Fourier transform.

e) CSD: Apply CSD for each transmit chain as described in 32.3.8.2.1 (Cyclic shift for pre-NGV modulated fields).

f) Insert GI and apply windowing: Prepend a GI and apply windowing as described in 32.3.7.3 (Transmitted signal).

Analog and RF: Upconvert the resulting complex baseband waveform associated with each transmit chain to an RF signal according to the center frequency of the desired channel and transmit. Refer to 32.3.7.3 (Transmitted signal) and 32.3.8 (NGV preamble) for details.

#### 32.3.4.3 Construction of the L-LTF

Construct the L-LTF field as defined in 32.3.8.4 (L-LTF definition) with the following highlights:

a) Determine the CH_BANDWIDTH from the TXVECTOR.

b) Sequence generation: Generate the L-LTF sequence over the CH_BANDWIDTH as described in 32.3.8.4 (L-LTF definition).

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

c) Phase rotation: Apply appropriate phase rotation for each 10 MHz subchannel as described in 32.3.7.3 (Transmitted signal) and 32.3.7.4 (Definition of tone rotation).

d) IDFT: Compute the inverse discrete Fourier transform.

e) CSD: Apply CSD for each transmit chain as described in 32.3.8.2.1 (Cyclic shift for pre-NGV modulated fields).

f) Insert GI and apply windowing: Prepend a GI and apply windowing as described in 32.3.7.3 (Transmitted signal).

g) Analog and RF: Upconvert the resulting complex baseband waveform associated with each transmit chain to an RF signal according to the center frequency of the desired channel and transmit. Refer to 32.3.7.3 (Transmitted signal) and 32.3.8 (NGV preamble) for details.

#### 32.3.4.4 Construction of the L-SIG and RL-SIG

Construct the L-SIG field as the SIGNAL field defined in 32.3.8.5 (L-SIG definition) with the following highlights:

a) In an NGV PPDU set the RATE subfield in the SIGNAL field to 3 Mb/s in the 10 MHz channel spacing column of Table 17-6 (Contents of the SIGNAL field). Set the Length, Parity, and Tail bits in the SIGNAL field as described in 32.3.8.5 (L-SIG definition).

b) BCC encoder: Encode the SIGNAL field by a convolutional encoder at the rate of R=1/2 as described in 17.3.5.6 (Convolutional encoder).

c) BCC interleaver: Interleave as described in 17.3.5.7 (Data interleaving).

d) Constellation Mapper: BPSK modulate as described in 17.3.5.8 (Subcarrier modulation mapping).

e) Pilot insertion: Insert pilots as described in 17.3.5.9 (Pilot subcarriers).

f) Duplication and phase rotation: Duplicate the L-SIG field over each 10 MHz of the CH_BANDWIDTH. Apply appropriate phase rotation for each 10 MHz subchannel as described in 32.3.7.3 (Transmitted signal) and 32.3.7.4 (Definition of tone rotation).

g) IDFT: Compute the inverse discrete Fourier transform.

h) CSD: Apply CSD for each transmit chain as described in 32.3.8.2.1 (Cyclic shift for pre-NGV modulated fields).

i) Insert GI and apply windowing: Prepend a GI and apply windowing as described in 32.3.7.3 (Transmitted signal).

j) Analog and RF: Upconvert the resulting complex baseband waveform associated with each transmit chain to an RF signal according to the center frequency of the desired channel and transmit. Refer to 32.3.7.3 (Transmitted signal) and 32.3.8 (NGV preamble) for details.

Construct the RL-SIG field as the repeat SIGNAL field defined in 32.3.8.6 (RL-SIG definition) with the same process as for the L-SIG field.

#### 32.3.4.5 Construction of the NGV-SIG and RNGV-SIG

The NGV-SIG field consists of one symbol as defined in 32.3.8.7 (NGV-SIG definition) and is constructed as follows:

a) Obtain the NGV-SIG field values from the TXVECTOR entries of NGV-MCS, CH_BANDWIDTH, MIDAMBLE_PERIODICITY, NGV_LTF_TYPE, NUM_SS, and LTF_REP. Add the reserved bits, append the calculated CRC, then append the tail bits as shown in 32.3.8.7 (NGV-SIG definition). This results in 24 uncoded bits.

b) BCC encoder: Encode the data by a convolutional encoder at the rate of R=1/2 as described in 17.3.5.6 (Convolutional encoder).

c) BCC interleaver: Interleave as described in 17.3.5.7 (Data interleaving).

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

d) Constellation Mapper: BPSK modulate the 48 interleaved bits as described in 17.3.5.8 (Subcarrier modulation mapping) to form the NGV-SIG symbol.

e) Pilot insertion: Insert pilots as described in 17.3.5.9 (Pilot subcarriers).

f) Duplication and phase rotation: Duplicate NGV-SIG over each 10 MHz of the CH_BANDWIDTH. Apply appropriate phase rotation for each 10 MHz subchannel as described in 32.3.7.3 (Transmitted signal) and 32.3.7.4 (Definition of tone rotation).

g) IDFT: Compute the inverse discrete Fourier transform.

h) CSD: Apply CSD for each transmit chain as described in 32.3.8.2.1 (Cyclic shift for pre-NGV modulated fields).

i) Insert GI and apply windowing: Prepend a GI and apply windowing as described in 32.3.7.3 (Transmitted signal).

j) Analog and RF: Upconvert the resulting complex baseband waveform associated with each transmit chain to an RF signal according to the center frequency of the desired channel and transmit. Refer to 32.3.7.3 (Transmitted signal) and 32.3.8 (NGV preamble) for details.

Construct the RNGV-SIG field as the repeat NGV-SIG field defined in 32.3.8.8 (RNGV-SIG definition) with the same process as for the NGV-SIG field.

#### 32.3.4.6 Construction of NGV-STF

The NGV-STF field is defined in 32.3.8.9 (NGV-STF definition) and is constructed as follows:

a) Sequence generation: Generate the NGV-STF in the frequency domain over the bandwidth indicated by CH_BANDWIDTH as described in 32.3.8.9 (NGV-STF definition).

b) Phase rotation: Apply appropriate phase rotation for each 10 MHz subchannel as described in 32.3.7.3 (Transmitted signal) and 32.3.7.4 (Definition of tone rotation).

c) CSD: Apply CSD for each spatial stream as described in 32.3.8.2.2 (Cyclic shift for NGV modulated fields).

d) Spatial mapping: Apply the $Q$ matrix as described in 32.3.9.8.1 (Transmission in NGV format).

e) IDFT: Compute the inverse discrete Fourier transform.

f) Insert GI and apply windowing: Prepend a GI and apply windowing as described in 32.3.7.3 (Transmitted signal).

g) Analog and RF: Upconvert the resulting complex baseband waveform associated with each transmit chain to an RF signal according to the center frequency of the desired channel and transmit. Refer to 32.3.7.3 (Transmitted signal) and 32.3.8 (NGV preamble) for details.

#### 32.3.4.7 Construction of NGV-LTF

The NGV-LTF field is defined in 32.3.8.10 (NGV-LTF definition) and constructed as follows:

a) Sequence generation: Generate the NGV-LTF sequence in the frequency domain over the CH_BANDWIDTH as described in 32.3.8.10 (NGV-LTF definition).

b) Phase rotation: Apply appropriate phase rotation for each 10 MHz subchannel as described in 32.3.7.3 (Transmitted signal) and 32.3.7.4 (Definition of tone rotation).

c) $A_{NGV\text{-}LTF}$ matrix mapping: Apply the $P_{NGV\text{-}LTF}$ matrix to the data tones of the NGV-LTF sequence and apply the $R_{NGV\text{-}LTF}$ matrix to the pilot tones as described in 32.3.8.10 (NGV-LTF definition).

d) CSD: Apply CSD for each spatial stream as described in 32.3.8.2.2 (Cyclic shift for NGV modulated fields).

e) Spatial mapping: Apply the $Q$ matrix as described in 32.3.9.8.1 (Transmission in NGV format).

f) IDFT: Compute the inverse discrete Fourier transform.

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

g) Insert GI and apply windowing: Prepend a GI and apply windowing as described in 32.3.7.3 (Transmitted signal).

h) Analog and RF: Upconvert the resulting complex baseband waveform associated with each transmit chain to an RF signal according to the center frequency of the desired channel and transmit. Refer to 32.3.7.3 (Transmitted signal) and 32.3.8 (NGV preamble) for details.

#### 32.3.4.8 Construction of the Data field in an NGV PPDU

The construction of the Data field in an NGV PPDU proceeds as follows:

a) Construct the SERVICE field as described in 32.3.9.2 (SERVICE field) and append the PSDU to the SERVICE field.

b) PHY padding: Append the PHY pad bits to the PSDU. There are no tail bits.

c) Scrambler: Scramble the PHY padded data.

d) LDPC encoder: The scrambled bits are encoded using the LDPC code with the APEP_LENGTH in the TXVECTOR as described in 32.3.9.4 (Coding).

e) Stream parser: The output of the LDPC encoder is rearranged into blocks as described in 32.3.9.5 (Stream parser).

f) Phase rotation: Apply appropriate phase rotation for each 10 MHz subchannel as described in 32.3.7.3 (Transmitted signal) and 32.3.7.4 (Definition of tone rotation).

g) CSD: Apply CSD for each spatial stream as described in 32.3.8.2.2 (Cyclic shift for NGV modulated fields).

h) Spatial mapping: Apply the $Q$ matrix as described in 32.3.9.8.1 (Transmission in NGV format).

i) IDFT: Compute the inverse discrete Fourier transform.

j) Insert GI and apply windowing: Prepend a GI and apply windowing as described in 32.3.7.3 (Transmitted signal).

k) Analog and RF: Upconvert the resulting complex baseband waveform associated with each transmit chain to an RF signal according to the center frequency of the desired channel and transmit. Refer to 32.3.7.3 (Transmitted signal) and 32.3.8 (NGV preamble) for details.

### 32.3.5 NGV modulation and coding schemes

The NGV-MCS is a value that determines the modulation and coding used in the Data field of the PPDU. It is a compact representation that is carried in the NGV-SIG field and RNGV-SIG field for NGV PPDUs. Rate dependent parameters for the full set of NGV-MCSs are shown in Table 32-21 (NGV-MCSs for 10 MHz, NSS = 1(11bd)) to Table 32-24 (NGV-MCSs for 20 MHz, NSS = 2(11bd)). These tables give rate-dependent parameters for NGV-MCSs with indices $n$, where $n$ = 0, ..., 15, with number of spatial streams from 1 to 2 and bandwidth options of 10 MHz and 20 MHz. Equal modulation is applied to all streams.

The use of BPSK-DCM on the Data field of an NGV PPDU is indicated as NGV-MCS 15 in NGV-SIG field.

### 32.3.6 Timing related parameters

Table 32-6 (Timing related constants(11bd)) defines the timing related parameters.

**Table 32-6—Timing related constants(11bd)**

| Parameter | CBW10 | CBW20 | Description |
|---|---|---|---|
| $N_{SD}$ | 52 | 108 | Number of data subcarriers |
| $N_{SP}$ | 4 | 6 | Number of pilot subcarriers |
| $N_{ST}$ | 56 | 114 | Total number of subcarriers<br>See NOTE |
| $N_{SR}$ | 28 | 58 | Highest data subcarrier index |
| $\Delta_F$ | 156.25 kHz | | Subcarrier frequency spacing |
| $T_{DFT}$ | 6.4 μs | | IDFT/DFT period |
| $T_{GI}$ | 1.6 μs = $T_{DFT}$/4 | | Guard interval duration |
| $T_{GI2}$ | 3.2 μs | | Double guard interval |
| $T_{SYM}$ | 8 μs = $T_{DFT}$ + $T_{GI}$ = 1.25×$T_{DFT}$ | | Symbol interval |
| $T_{\text{L-STF}}$ | 16 μs = 10 × $T_{DFT}$/4 | | Non-HT Short Training field duration |
| $T_{\text{L-LTF}}$ | 16 μs = 2 × $T_{DFT}$ + $T_{GI2}$ | | Non-HT Long Training field duration |
| $T_{\text{L-SIG}}$ | 8 μs | | Non-HT SIGNAL field duration |
| $T_{\text{RL-SIG}}$ | 8 μs | | Repeated Non-HT SIGNAL field duration |
| $T_{\text{NGV-SIG}}$ | 8 μs | | NGV SIGNAL field duration |
| $T_{\text{RNGV-SIG}}$ | 8 μs | | Repeated NGV SIGNAL field duration |
| $T_{\text{NGV-STF}}$ | 8 μs | | NGV Short Training field duration |
| $T_{\text{NGV-LTF-2X}}$ | 8 μs | | Duration of each NGV-LTF-2x symbol |
| $T_{\text{NGV-LTF-1X}}$ | 4.8 μs | | Duration of each NGV-LTF-1x symbol |
| $T_{\text{NGV-LTF-2X-Repeat}}$ | 14.4 μs | | Duration of each repeated NGV-LTF-2x symbol |
| $T_{\text{NGV-LTF}}$ | $T_{\text{NGV-LTF-2X}}$ , $T_{\text{NGV-LTF-1X}}$ or $T_{\text{NGV-LTF-2X-Repeat}}$ depending on the LTF format used | | Duration of each OFDM symbol in NGV-LTF field |
| $N_{service}$ | 16 | | Number of bits in the SERVICE field |
| $N_{tail}$ | 6 | | Number of tail bits per BCC encoder |
| NOTE —$N_{ST} = N_{SD} + N_{SP}$ | | | |

Table 32-7 (Frequently used parameters(11bd)) defines parameters used frequently in Clause 32 (Next Generation V2X (NGV) PHY specification(11bd)).

**Table 32-7—Frequently used parameters(11bd)**

| Symbol | Explanation |
|---|---|
| $N_{CBPS}$ | Number of coded bits per symbol |
| $N_{CBPSS}$ | Number of coded bits per symbol per spatial stream |
| $N_{DBPS}$ | Number of data bits per symbol |
| $N_{BPSCS}$ | Number of coded bits per subcarrier per spatial stream |
| $N_{RX}$ | Number of receive chains |
| $N_{SS}$ | Number of spatial streams |
| $N_{TX}$ | Number of transmit chains |
| $N_{\text{NGV-LTF}}$ | Number of NGV-LTF symbols |
| $R$ | $R$ is the coding rate |

### 32.3.7 Mathematical description of signals

#### 32.3.7.1 Notation

For a description of the conventions used for the mathematical description of the signals, see 17.3.2.5 (Mathematical conventions in the signal descriptions), and 21.3.7.1 (Notation).

#### 32.3.7.2 Subcarrier indices in use

For a 10 MHz non-NGV PPDU, the signal is transmitted on subcarriers –26 to –1 and 1 to 26, with 0 being the center (DC) subcarrier. See 17.3.2.6 (Discrete time implementation considerations).

For a 10 MHz NGV PPDU transmission, the 10 MHz is divided into 64 subcarriers. The signal is transmitted on subcarriers –28 to –1 and 1 to 28, with 0 being the center (DC) subcarrier.

For a 20 MHz NGV PPDU transmission, the 20 MHz is divided into 128 subcarriers. The signal is transmitted on subcarriers –58 to –2 and 2 to 58.

#### 32.3.7.3 Transmitted signal

The transmitted signal is described in complex baseband signal notation. The actual transmitted signal is related to the complex baseband signal by the relation shown in Equation (32-1).

$$r_{RF}^{i_{TX}} = \text{Re}\{r_{PPDU}^{i_{TX}}(t) \exp(j2\pi f_c t)\}, \quad i_{TX} = 1, \ldots, N_{TX} \tag{32-1}$$

where

$r_{PPDU}^{i_{TX}}(t)$ represents the complex baseband signal of transmit chain $i_{TX}$

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

$f_c$ represents the center frequency of the PPDU

The transmitted RF signal is derived by upconverting the complex baseband signal, which consists of several fields. The timing boundaries for the various fields are shown in Figure 32-8 (Timing boundaries for NGV PPDU fields(11bd)), where $N_{\text{NGV-LTF}}$ is the number of NGV-LTF symbols as defined in Table 32-11 (Number of NGV-LTFs required for different numbers of spatial streams(11bd)).

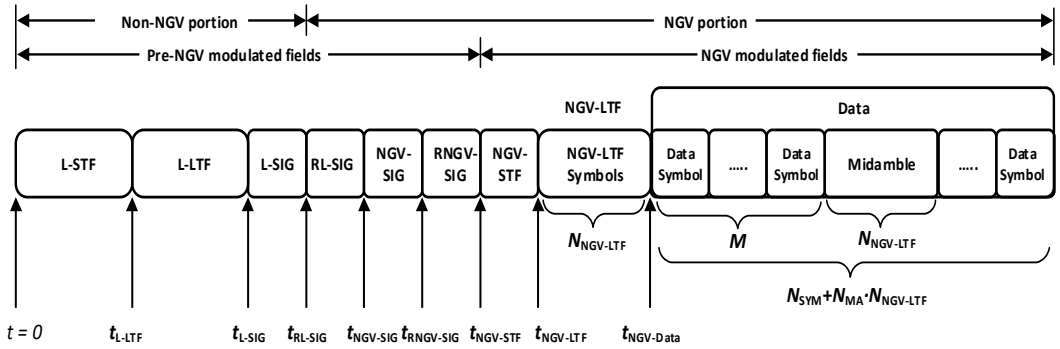

**Figure 32-8—Timing boundaries for NGV PPDU fields(11bd)**

The time offset, $t_{Field}$, determines the starting time of the corresponding field relative to the start of L-STF ($t = 0$).

The signal transmitted on transmit chain $i_{TX}$ shall be as shown in Equation (32-2).

$$\begin{aligned} r_{PPDU}^{i_{TX}}(t) = {} & r_{L\text{-}STF}^{i_{TX}}(t) + r_{L\text{-}LTF}^{i_{TX}}(t - t_{L\text{-}LTF}) \\ & + r_{L\text{-}SIG}^{i_{TX}}(t - t_{L\text{-}SIG}) + r_{RL\text{-}SIG}^{i_{TX}}(t - t_{RL\text{-}SIG}) + r_{NGV\text{-}SIG}^{i_{TX}}(t - t_{NGV\text{-}SIG}) \\ & + r_{RNGV\text{-}SIG}^{i_{TX}}(t - t_{RNGV\text{-}SIG}) + r_{NGV\text{-}STF}^{i_{TX}}(t - t_{NGV\text{-}STF}) + r_{NGV\text{-}LTF}^{i_{TX}}(t - t_{NGV\text{-}LTF}) \\ & + r_{NGV\text{-}Data}^{i_{TX}}(t - t_{NGV\text{-}Data}) \end{aligned} \tag{32-2}$$

where

$$1 \le i_{TX} \le N_{TX}$$

$$t_{L\text{-}LTF} = T_{L\text{-}STF}$$

$$t_{L\text{-}SIG} = t_{L\text{-}LTF} + T_{L\text{-}LTF}$$

$$t_{RL\text{-}SIG} = t_{L\text{-}SIG} + T_{L\text{-}SIG}$$

$$t_{NGV\text{-}SIG} = t_{RL\text{-}SIG} + T_{RL\text{-}SIG}$$

$$t_{RNGV\text{-}SIG} = t_{NGV\text{-}SIG} + T_{NGV\text{-}SIG}$$

$$t_{NGV\text{-}STF} = t_{RNGV\text{-}SIG} + T_{RNGV\text{-}SIG}$$

$$t_{NGV\text{-}LTF} = t_{NGV\text{-}STF} + T_{NGV\text{-}STF}$$

$$t_{NGV\text{-}Data} = t_{NGV\text{-}LTF} + N_{NGV\text{-}LTF} \cdot T_{NGV\text{-}LTF} \cdot$$

Each field, $r_{Field}^{i_{TX}}(t)$, is defined as the summation of one or more subfields, where each subfield is defined to be an inverse discrete Fourier transform as specified in Equation (32-3).

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

$$r_{Subfield}^{i_{TX}}(t) = \frac{1}{\sqrt{N_{\text{Field}}^{\text{Tone}} \times N_{Norm}}} w_{T_{Subfield}}(t)\eta_{Field} \sum_{k=-N_{SR}}^{N_{SR}} \sum_{m=1}^{N_{SS}} [Q_k]_{i_{TX},m} \Upsilon_{k,BW} X_k^m \exp(j2\pi k\Delta_F(t - T_{GI,Field} - T_{CS,NGV}(m))) \quad (32\text{-}3)$$

This general representation holds for all subfields. The total power of the time domain NGV modulated field signals summed over all transmit chains should not exceed the total power of the time domain pre-NGV modulated field signals summed over all transmit chains. For notational simplicity, the parameter BW is omitted from some bandwidth dependent terms.

In Equation (32-3), the following notations are used:

$N_{Field}^{\text{Tone}}$ Table 32-8 (Tone scaling factor and guard interval duration values for PHY fields(11bd)) summarizes the various values of $N_{Field}^{\text{Tone}}$ as a function of bandwidth.

$N_{Norm}$ For pre-NGV modulated fields, $N_{Norm} = N_{TX}$. For NGV modulated fields $N_{Norm} = N_{SS}$, where $N_{SS}$ is given in Table 32-7 (Frequently used parameters(11bd)).

$w_{T_{Subfield}}(t)$ is a windowing function. An example function, $w_{T_{Subfield}}(t)$, is given in 17.3.2.5 (Mathematical conventions in the signal descriptions). $T_{Subfield}$ is $T_{L\text{-}STF}$ for L-STF, $T_{L\text{-}LTF}$ for L-LTF, $T_{L\text{-}SIG}$ for L-SIG, $T_{RL\text{-}SIG}$ for RL-SIG, $T_{NGV\text{-}SIG}$ for NGV-SIG, $T_{RNGV\text{-}SIG}$ for RNGV-SIG, $T_{NGV\text{-}STF}$ for NGV-STF, $T_{NGV\text{-}LTF}$ for NGV-LTF symbol and midamble symbol, and $T_{SYM}$ for Data symbol.

$Q_k$ is the spatial mapping matrix for the subcarrier $k$. For pre-NGV modulated fields, $Q_k$ is a column vector with $N_{TX}$ elements with element $i_{TX}$ being $e^{-j2\pi k\Delta_F T_{CS}^{i_{TX}}}$, where $T_{CS}^{i_{TX}}$ represents the cyclic shift for transmitter chain $i_{TX}$ whose values are given in Table 21-10 (Cyclic shift values for L-STF, L-LTF, L-SIG, and VHT-SIG-A fields of the PPDU). For NGV modulated fields, $Q_k$ is a matrix with $N_{TX}$ rows and $N_{SS}$ columns as further described in 32.3.9.8.1 (Transmission in NGV format).

$\Upsilon_{k,BW}$ is defined in 32.3.7.4 (Definition of tone rotation).

$\Delta_F$ is the subcarrier frequency spacing given in Table 32-6 (Timing related constants(11bd)).

$X_k^m$ is the frequency domain symbol in subcarrier $k$ of spatial stream $m$. Some of the $X_k^m$ within $-N_{SR} \le k \le N_{SR}$ have a value of 0. Examples of such cases include the DC tones, guard tones on each side of the transmit spectrum, as well as the unmodulated tones of L-STF and NGV-STF fields.

NOTE—The multiplication matrices $A_{NGV\text{-}LTF}^k$ and $P_{NGV\text{-}LTF}$ are included in the calculation of $X_k^m$ for the NGV-LTF field.

$T_{GI,Field}$ is the guard interval duration used for each OFDM symbol in the field. For L-STF and NGV-STF, $T_{GI,Field} = T_{GI}$ but it can be omitted from Equation (32-3) due to the periodic property of L-STF and NGV-STF over every 1.6 µs. For the L-SIG, RL-SIG, NGV-SIG, RNGV-SIG, NGV-LTF, and Data fields, $T_{GI,Field}$ is defined in the "Guard interval duration" column of Table 32-8 (Tone scaling factor and guard interval duration values for PHY fields(11bd)).

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

$T_{CS,NGV}(m)$ For pre-NGV modulated fields, $T_{CS,NGV}(m) = 0$. For NGV modulated fields, $T_{CS,NGV}(m)$ represents the cyclic shift per spatial stream, whose value is given in 21.3.8.3.2 (Cyclic shift for VHT modulated fields), where the row for $N_{STS,total} = 1$ corresponds to $N_{SS} = 1$ and the row for $N_{STS,total} = 2$ corresponds to $N_{SS} = 2$.

$\eta_{Field}$ is the power scale factor of a given field within an OFDM symbol for NGV PPDU. For the L-STF and L-LTF fields, $\eta_{Field}$ is $\sqrt{2}$ when NGV-MCS 0 or NGV-MCS 15 and one spatial stream is used for data field in 10 MHz NGV PPDU; otherwise it is 1. For other fields of NGV PPDU, $\eta_{Field} = 1$.

**Table 32-8—Tone scaling factor and guard interval duration values for PHY fields(11bd)**

| Field | $N_{Field}^{Tone}$ | | Guard interval duration |
|---|---|---|---|
| | 10 MHz | 20 MHz | |
| L-STF | 12 | 24 | — |
| L-LTF | 52 | 104 | $T_{GI2}$ |
| L-SIG | 52 | 104 | $T_{GI}$ |
| RL-SIG | 52 | 104 | $T_{GI}$ |
| NGV-SIG | 52 | 104 | $T_{GI}$ |
| RNGV-SIG | 52 | 104 | $T_{GI}$ |
| NGV-STF | 12 | 24 | — |
| NGV-LTF-1x | 28 | 58 | $T_{GI}$ |
| NGV-LTF-2x | 56 | 114 | $T_{GI}$ |
| NGV-LTF-2x-Repeat | 56 | 114 | $T_{GI}$ |
| Data | 56 | 114 | $T_{GI}$ |
| NON_NGV_10_DUP_OFDM-Data | — | 104 | $T_{GI}$ |

### 32.3.7.4 Definition of tone rotation

The function $\Upsilon_{k,BW}$ is used to represent a rotation of the tones. The value of $BW$ in $\Upsilon_{k,BW}$ is determined by the TXVECTOR parameter CH_BANDWIDTH as defined in Table 32-9 (CH_BANDWIDTH(11bd)).

**Table 32-9—CH_BANDWIDTH(11bd)**

| CH_BANDWIDTH | $\Upsilon_{k,BW}$ |
|---|---|
| CBW10 | $\Upsilon_{k,10}$ |
| CBW20 | $\Upsilon_{k,20}$ |

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

For a 10 MHz NGV PPDU transmission:

$$\Upsilon_{k,10} = 1 \tag{32-4}$$

For a 20 MHz NGV PPDU transmission:

$$\Upsilon_{k,20} = \begin{cases} 1, & k < 0 \\ j, & k \geq 0 \end{cases} \tag{32-5}$$

### 32.3.8 NGV preamble

#### 32.3.8.1 Introduction

An NGV preamble is defined to carry the required information to operate in a system with multiple transmit and multiple receive antennas. To maintain compatibility with non-NGV STAs, specific non-NGV fields are defined that can be received by non-NGV STAs compliant with Clause 17 (Orthogonal frequency division multiplexing (OFDM) PHY specification). The non-NGV fields are followed by NGV fields specific to NGV STAs.

#### 32.3.8.2 Cyclic shift

##### 32.3.8.2.1 Cyclic shift for pre-NGV modulated fields

The cyclic shift value $N_{CS}^{i_{TX}}$ for the L-STF, L-LTF, L-SIG, RL-SIG, NGV-SIG, and RNGV-SIG fields of the PPDU for transmit chain $i_{TX}$ out of a total of $N_{TX}$ are defined in Table 21-10 (Cyclic shift values for L-STF, L-LTF, L-SIG, and VHT-SIG-A fields of the PPDU).

##### 32.3.8.2.2 Cyclic shift for NGV modulated fields

The cyclic shift values defined in this subclause apply to the NGV-STF, NGV-LTF, and Data fields of the NGV PPDU.

Throughout the NGV modulated fields of the preamble, cyclic shifts are applied to prevent unintended beamforming when correlated signals are transmitted in multiple spatial streams. The same cyclic shift is also applied to these streams during the transmission of the Data field of the NGV PPDU. The cyclic shift value for the NGV modulated fields for spatial stream *m* out of $N_{SS}$, the number of spatial streams, is shown in Table 21-11 (Cyclic shift values for the VHT modulated fields of a PPDU) where the values in the row for $N_{STS} = m$ is used.

#### 32.3.8.3 L-STF definition

The frequency domain sequence of the L-STF field for a 10 MHz or 20 MHz transmission is defined by Equation (19-8) and Equation (19-9), respectively, in 19.3.9.3.3 (L-STF definition).

The time domain representation of the signal on transmit chain $i_{TX}$ shall be as specified in Equation (32-6).

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

$$r_{L\text{-}STF}^{(i_{TX})}(t) = \frac{1}{\sqrt{N_{TX} \times N_{L\text{-}STF}^{Tone}}} w_{T_{L\text{-}STF}}(t) \eta_{L-STF} \sum_{i_{BW}=0}^{N_{10\,\mathrm{MHz}}-1} \sum_{k=-26}^{26} (\gamma_{(k-K_{shift}(i_{BW})),\,BW} S_{k,\,10} \times \exp(j2\pi(k-K_{shift}(i_{BW}))\Delta_F(t-T_{CS}^{i_{TX}}))) \quad (32\text{-}6)$$

where

$\eta_{L-STF}$ is the modulation dependent power scaling factor for the L-STF field with the following value:

$$\eta_{L-STF} = \begin{cases} \sqrt{2}, & \text{when NGV-MCS 0 or NGV-MCS 15 and one spatial stream is used on Data field for 10 MHz transmission} \\ 1, & \text{otherwise} \end{cases}$$

$$N_{10\,\mathrm{MHz}} = \begin{cases} 1, & \text{If CH\_BANDWIDTH is CBW10} \\ 2, & \text{If CH\_BANDWIDTH is CBW20} \end{cases}$$

$K_{shift}(i) = (N_{10\,\mathrm{MHz}} - 1 - 2i) \times 32$

$T_{CS}^{(i_{TX})}$ represents the cyclic shift for transmit chain $i_{TX}$ with a value given in 32.3.8.2.1 (Cyclic shift for pre-NGV modulated fields)

$\gamma_{k,\,BW}$ is defined in Equation (32-4) and Equation (32-5)

$N_{L\text{-}STF}^{Tone}$ has the value given in Table 32-8 (Tone scaling factor and guard interval duration values for PHY fields(11bd))

$S_{k,\,10}$ is defined as $S_{-26,\,26}$ in Equation (19-8)

### 32.3.8.4 L-LTF definition

For a 10 MHz or 20 MHz transmission, the L-LTF pattern in the NGV preamble is defined by Equation (19-11) and Equation (19-12) in 19.3.9.3.4 (L-LTF definition), respectively.

The time domain representation of the signal on transmit chain $i_{TX}$ shall be as defined in Equation (32-7).

$$r_{L\text{-}LTF}^{(i_{TX})}(t) = \frac{1}{\sqrt{N_{TX} \times N_{L\text{-}LTF}^{Tone}}} w_{T_{L\text{-}LTF}}(t) \eta_{L-LTF} \sum_{i_{BW}=0}^{N_{10\,\mathrm{MHz}}-1} \sum_{k=-26}^{26} (\gamma_{(k-K_{shift}(i_{BW})),\,BW} L_{k,\,10} \times \exp(j2\pi(k-K_{shift}(i_{BW}))\Delta_F(t-T_{CS}^{i_{TX}}))) \quad (32\text{-}7)$$

where

$\eta_{L-LTF}$ is a modulation dependent scaling factor for the L-LTF field with the same value as $\eta_{L-STF}$

$T_{CS}^{(i_{TX})}$ represents the cyclic shift for transmit chain $i_{TX}$ with a value given in 32.3.8.2.1 (Cyclic shift for pre-NGV modulated fields)

$\gamma_{k,\,BW}$ is defined in Equation (32-4) and Equation (32-5)

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

$N_{L\text{-}LTF}^{Tone}$ has the value given in Table 32-8 (Tone scaling factor and guard interval duration values for PHY fields(11bd))

$N_{10\,\mathrm{MHz}}$ is defined in 32.3.8.3 (L-STF definition)

$K_{shift}(i) = (N_{10\,\mathrm{MHz}} - 1 - 2i) \times 32$

$L_{k,\,10}$ is defined as $L_{-26,\,26}$ in Equation (19-11)

### 32.3.8.5 L-SIG definition

The L-SIG field is used to communicate rate and length information. The structure of the L-SIG field is defined in Figure 17-5 (SIGNAL field bit assignment).

In an NGV PPDU, the RATE field shall be set to the value representing 3 Mb/s in the 10 MHz channel spacing column of Table 17-6 (Contents of the SIGNAL field). In a non-NGV duplicate PPDU, the RATE field is defined in 17.3.4.2 (RATE field) using the L_DATARATE parameter in the TXVECTOR.

The Length field shall be set to the value given by Equation (32-8).

$$\text{Length} = \frac{\text{TXTIME} - 40}{8} \times 3 - 3 \tag{32-8}$$

where

TXTIME (in μs) is defined in 32.4.3 (TXTIME and PSDU_LENGTH calculation).

The LSB of the binary expression of the value of the Length field shall be mapped to B5. In a non-NGV duplicate PPDU, the LENGTH field is defined in 17.3.4.3 (PHY LENGTH field) using the L_LENGTH parameter in the TXVECTOR.

The Reserved (R) field shall be set to 0.

The Parity (P) field has the even parity of bits 0–16.

The SIGNAL TAIL field shall be set to 0.

The L-SIG field shall be encoded, interleaved, and mapped following the steps described in 17.3.5.6 (Convolutional encoder), 17.3.5.7 (Data interleaving), and 17.3.5.8 (Subcarrier modulation mapping). The stream of 48 complex numbers generated by these steps is denoted by $d_k$, $k = 0, \ldots, 47$ and are mapped to subcarriers [–26, 26]. Pilots shall be inserted as described in 17.3.5.9 (Pilot subcarriers).

The time domain waveform of the L-SIG field shall be as given by Equation (32-9).

$$r_{L\text{-}SIG}^{(i_{TX})}(t) = \frac{1}{\sqrt{N_{TX} \times N_{L\text{-SIG}}^{Tone}}} w_{\mathrm{T}_{L\text{-}SIG}}(t) \sum_{i_{BW}=0}^{N_{10\,\mathrm{MHz}}-1} \sum_{k=-26}^{26} \gamma_{(k - K_{shift}(i_{BW})),\,BW}(D_{k,\,10} + p_0 P_k) \times \exp(j2\pi(k - K_{shift}(i_{BW}))\Delta_F(t - T_{GI} - T_{CS}^{i_{TX}})) \tag{32-9}$$

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

where

$N_{10\,\mathrm{MHz}}$ is defined in 32.3.8.3 (L-STF definition)

$K_{shift}(i) = (N_{10\,\mathrm{MHz}} - 1 - 2i) \times 32$

$$D_{k,\,10} = \begin{cases} 0,\ k = 0, \pm 7, \pm 21 \\ d_{M_{10}^{r}(k)},\ \text{otherwise} \end{cases}$$

$$M_{10}^{r}(k) = \begin{cases} k + 26, & -26 \le k \le -22 \\ k + 25, & -20 \le k \le -8 \\ k + 24, & -6 \le k \le -1 \\ k + 23, & 1 \le k \le 6 \\ k + 22, & 8 \le k \le 20 \\ k + 21, & 22 \le k \le 26 \end{cases} \tag{32-10}$$

$P_k$ is defined in 17.3.5.10 (OFDM modulation)

$p_0$ is the first pilot value in the sequence defined in 17.3.5.10 (OFDM modulation)

$N_{L\text{-}SIG}^{Tone}$ has the value given in Table 32-8 (Tone scaling factor and guard interval duration values for PHY fields(11bd))

$\gamma_{k,BW}$ is defined in Equation (32-4) and Equation (32-5)

$T_{CS}^{i_{TX}}$ represents the cyclic shift for transmit chain $i_{TX}$ with a value given in 32.3.8.2.1 (Cyclic shift for pre-NGV modulated fields)

NOTE—$M_{10}^{r}(k)$ is a "reverse" function of the $M(k)$ defined in 17.3.5.10 (OFDM modulation).

### 32.3.8.6 RL-SIG definition

The RL-SIG field is a repeat of the L-SIG field and is used to differentiate an NGV PPDU from a non-NGV PPDU. RL-SIG field shall be modulated the same as L-SIG field.

The time domain waveform of the RL-SIG field shall be as given by Equation (32-11).

$$r_{RL\text{-}SIG}^{(i_{TX})}(t) = \frac{1}{\sqrt{N_{TX} \times N_{RL\text{-}\mathrm{SIG}}^{Tone}}} w_{\mathrm{T}_{L\text{-}SIG}}(t) \sum_{i_{BW}=0}^{N_{10\,\mathrm{MHz}}-1} \sum_{k=-26}^{26} \gamma_{(k - K_{shift}(i_{BW})),\,BW} (D_{k,\,10} + p_1 P_k) \times \exp(j2\pi(k - K_{shift}(i_{BW}))\Delta_F(t - T_{GI} - T_{CS}^{i_{TX}})) \tag{32-11}$$

where

$N_{RL\text{-}\mathrm{SIG}}^{Tone}$ has the value given in Table 32-8 (Tone scaling factor and guard interval duration values for PHY fields(11bd)).

$p_1$ is the second pilot value in the sequence defined in 17.3.5.10 (OFDM modulation)

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

### 32.3.8.7 NGV-SIG definition

The NGV-SIG field carries information required to interpret NGV PPDUs. The NGV-SIG field contains the fields listed in Table 32-10 (Fields in the NGV-SIG field(11bd)).

**Table 32-10—Fields in the NGV-SIG field(11bd)**

| Bit | Field | Number of bits | Description |
|---|---|---|---|
| B0–B1 | PHY Version | 2 | Set to 0 for NGV PHY. Values 1–3 are reserved. |
| B2 | Bandwidth | 1 | Set to 0 for 10 MHz, and set to 1 for 20 MHz. |
| B3–B6 | NGV-MCS | 4 | For 10 MHz PPDU, set to *n* for NGV-MCS *n*, where $n = 0, 1, 2, \ldots, 8$, and 15. Value 9 is not valid and values 10–14 are reserved.<br>For 20 MHz PPDU, set to *n* for NGV-MCS *n*, where $n = 0, 1, 2, \ldots, 9$, and 15. MCS 10–14 are reserved. |
| B7 | $N_{SS}$ | 1 | Set to 0 for one spatial stream, and set to 1 for two spatial streams. |
| B8–B9 | Midamble Periodicity | 2 | Set to 0 for 4 symbols.<br>Set to 1 for 8 symbols.<br>Set to 2 for 16 symbols.<br>Value 3 is reserved. |
| B10 | LTF Format | 1 | Set to 0 for NGV-LTF-2x.<br>Set to 1 for NGV-LTF-1x.<br><br>NOTE—If NGV-LTF-2x-Repeat is used (see 32.3.8.10 (NGV-LTF definition)) with B2 set to 0, B3–B6 set to 15 and B7 set to 0, this field is reserved and set to 1. |
| B11 | LDPC Extra OFDM Symbol | 1 | Set to 1 if the LPDC PPDU encoding process results in an extra OFDM symbol as described in 21.3.10.5.4 (LDPC coding).<br>Set to 0 otherwise. |
| B12 | LTF Repetition | 1 | Set to 1 for NGV ranging NDP with NGV-LTF repetition.<br>Set to 0 otherwise. |
| B13 | Reserved | 1 | Reserved and set to 1. |
| B14–B17 | CRC | 4 | CRC is calculated as in 27.3.11.7.3 ((CRC computation) with $L = 13$. |
| B18–B23 | Tail | 6 | Used to terminate the trellis of the convolutional decoder.<br>Set to 0. |

The NGV-SIG field is composed of one OFDM symbol, containing 24 data bits, as shown in Table 32-10 (Fields in the NGV-SIG field(11bd)). NGV-SIG is transmitted before RNGV-SIG. The NGV-SIG symbol shall be BCC encoded at rate, R = 1/2, be interleaved, be mapped to a BPSK constellation, and have pilots inserted following the steps described in 17.3.5.6 (Convolutional encoder), 17.3.5.7 (Data interleaving), 17.3.5.8 (Subcarrier modulation mapping), and 17.3.5.9 (Pilot subcarriers). The stream of 48 complex numbers generated by these steps (before pilot insertion) is denoted by $d_k, k = 0,\ldots,47$.

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

The time domain waveform for the NGV-SIG field in an NGV PPDU shall be as specified in Equation (32-12).

$$r_{NGV\text{-}SIG}^{(i_{TX})}(t) = \frac{1}{\sqrt{N_{TX} \times N_{NGV\text{-}SIG}^{Tone}}} w_{T_{NGV\text{-}SIG}}(t) \sum_{i_{BW}=0}^{N_{10\,\mathrm{MHz}}-1} \sum_{k=-26}^{26} \gamma_{(k-K_{shift}(i_{BW})),BW}(D_{k,10} + p_2 P_k) \times \exp(j2\pi(k - K_{shift}(i_{BW}))\Delta_F(t - T_{GI} - T_{CS}^{i_{TX}})) \quad (32\text{-}12)$$

where

$N_{10\,\mathrm{MHz}}$ and $K_{shift}(i)$ are defined in 32.3.8.5 (L-SIG definition)

$$D_{k,10} = \begin{cases} 0, & k = 0, \pm 7, \pm 21 \\ d_{M_{10}^r(k)}, & \text{otherwise} \end{cases}$$

$M_{10}^r(k)$ is defined in Equation (32-10)

$P_k$ and $p_2$ are defined in 17.3.5.10 (OFDM modulation)

$N_{NGV\text{-}SIG}^{Tone}$ has the value given in Table 32-8 (Tone scaling factor and guard interval duration values for PHY fields(11bd))

$\Upsilon_{k,BW}$ is defined in Equation (32-4) and Equation (32-5)

$T_{CS}^{i_{TX}}$ represents the cyclic shift for transmit chain $i_{TX}$ with a value given in 32.3.8.2.1 (Cyclic shift for pre-NGV modulated fields)

NOTE—In NGV PPDUs, the NGV-SIG is transmitted with the same number of subcarriers and the same cyclic shifts as the preceding non-NGV portion of the preamble.

### 32.3.8.8 RNGV-SIG definition

The RNGV-SIG field is a repeat of the NGV-SIG field and is configured identically to the NGV-SIG.

The time domain waveform of the RNGV-SIG field shall be as given by Equation (32-13).

$$r_{RNGV\text{-}SIG}^{(i_{TX})}(t) = \frac{1}{\sqrt{N_{TX} \times N_{RNGV\text{-}SIG}^{Tone}}} w_{T_{RNGV\text{-}SIG}}(t) \sum_{i_{BW}=0}^{N_{10\,\mathrm{MHz}}-1} \sum_{k=-26}^{26} \gamma_{(k-K_{shift}(i_{BW})),BW}(D_{k,10} + p_3 P_k) \times \exp(j2\pi(k - K_{shift}(i_{BW}))\Delta_F(t - T_{GI} - T_{CS}^{i_{TX}})) \quad (32\text{-}13)$$

where

$N_{RNGV\text{-}SIG}^{Tone}$ has the value given in Table 32-8 (Tone scaling factor and guard interval duration values for PHY fields(11bd))

$p_3$ is the fourth pilot value in the sequence defined in 17.3.5.10 (OFDM modulation)

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

### 32.3.8.9 NGV-STF definition

The main purpose of the NGV-STF field is to improve automatic gain control estimation in a MIMO transmission. The duration of the NGV-STF field is 8 μs. The frequency domain sequence used to construct the NGV-STF field in a 10 MHz transmission is identical to the VHT-STF field for 20 MHz transmission. In a 20 MHz transmission, the NGV-STF field is constructed by using the frequency domain sequence for the VHT-STF field of 40 MHz transmission and applying appropriate phase rotations per 10 MHz subchannel.

For a 10 MHz transmission, the frequency domain sequence is given by Equation (32-14).

$$NGVS_{-28,28} = VHTS_{-28,28} \tag{32-14}$$

where $VHTS_{-28,28}$ is defined in Equation (21-29).

For a 20 MHz transmission, the frequency domain sequence is given by Equation (32-15).

$$NGVS_{-58,58} = VHTS_{-58,58} \tag{32-15}$$

where $VHTS_{-58,58}$ is defined in Equation (21-30).

NOTE—Equation (32-14) and Equation (32-15) do not show the phase rotation per 10 MHz subchannel.

The time domain representation of the signal on transmit chain $i_{TX}$ shall be as specified in Equation (32-16).

$$r_{NGV\text{-}STF}^{(i_{TX})}(t) = \frac{1}{\sqrt{N_{SS} \times N_{NGV\text{-}STF}^{Tone}}} w_{T_{NGV\text{-}STF}}(t) \sum_{k=-N_{SR}}^{N_{SR}} \sum_{m=1}^{N_{SS}} [Q_k]_{i_{TX},m} \gamma_{k,BW} NGVS_k \times \exp(j2\pi k\Delta_F(t - T_{CS,NGV}(m))) \tag{32-16}$$

where

$N_{NGV\text{-}STF}^{Tone}$ has the value given in Table 32-8 (Tone scaling factor and guard interval duration values for PHY fields(11bd))

$T_{CS,NGV}(m)$ is given in 32.3.8.2.2 (Cyclic shift for NGV modulated fields)

$Q_k$ is defined in 32.3.7.3 (Transmitted signal)

$\gamma_{k,BW}$ is defined in defined in Equation (32-4) and Equation (32-5)

### 32.3.8.10 NGV-LTF definition

The NGV-LTF field provides means for the receiver to estimate the MIMO channel between the set of constellation mapper outputs and the receive chains. The transmitter provides training for $N_{SS}$ spatial streams (spatial mapper inputs) used for the transmission of the PSDU(s). For each tone, the MIMO channel that can be estimated is an $N_{RX} \times N_{SS}$ matrix. An NGV transmission has a preamble that contains NGV-LTF symbols, where the data tones of each NGV-LTF symbol are multiplied by entries belonging to a matrix $P_{NGV\text{-}LTF}$, to enable channel estimation at the receiver. The pilot tones of each NGV-LTF symbol are multiplied by the entries of a matrix $R_{NGV\text{-}LTF}$ defined in the following text. The multiplication of the pilot tones in the NGV-LTF symbol by the $R_{NGV\text{-}LTF}$ matrix instead of the $P_{NGV\text{-}LTF}$ matrix allows receivers to track phase and frequency offset during MIMO channel estimation using the NGV-LTF. The number of

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

NGV-LTF symbols, $N_{NGV\text{-}LTF}$, is a function of the number of spatial streams, $N_{SS}$, as shown in Table 32-11 (Number of NGV-LTFs required for different numbers of spatial streams(11bd)) and LTF_REP as shown in 32.3.16 (NGV ranging NDP). As a result the NGV-LTF field consists of one, two, or four symbols.

**Table 32-11—Number of NGV-LTFs required for different numbers of spatial streams(11bd)**

| $N_{SS}$ | $N_{NGV\text{-}LTF}$ |
|---|---|
| 1 | 1 × (LTF_REP + 1) |
| 2 | 2 × (LTF_REP + 1) |

An NGV PPDU supports three NGV-LTF formats: NGV-LTF-1x, NGV-LTF-2x, and NGV-LTF-2x-Repeat. NGV-LTF-2x is the default LTF format; NGV-LTF-1x is used for high efficiency transmission of one spatial stream and NGV-LTF-2x-Repeat is used for extended range transmissions. (#7220)A transmitter shall use the NGV-LTF-2x-Repeat format if the NGV Data field of a 10 MHz NGV PPDU is modulated with BPSK-DCM and one spatial stream; the transmitter shall use the NGV-LTF-2x format if the NGV Data field is modulated with two spatial streams; the transmitter shall use the NGV-LTF-2x format for an NGV ranging NDP; otherwise, the transmitter (#8147)shall choose either NGV-LTF-2x or NGV-LTF-1x format. The NGV-LTF format of NGV-LTF-1x or NGV-LTF-2x is signaled by B10 in NGV-SIG field. The NGV-LTF-2x-Repeat format is signaled by the combination of B2 set to 0, B3–B6 set to 15 and B7 set to 0 in NGV-SIG field, and B10 is Reserved and set to 1. The duration of each NGV-LTF symbol is $T_{NGV\text{-}LTF}$, defined in Equation (32-17).

$$T_{\text{NGV-LTF}} = \begin{cases} T_{\text{NGV-LTF-1X}}, & \text{if NGV-LTF-1x} \\ T_{\text{NGV-LTF-2X}}, & \text{if NGV-LTF-2x} \\ T_{\text{NGV-LTF-2X-Repeat}}, & \text{if NGV-LTF-2x-Repeat} \end{cases} \quad (32\text{-}17)$$

Let $LTF_{left}$ and $LTF_{right}$ be the sequences defined in Equation (32-18) and Equation (32-19), respectively.

$$LTF_{left} = \{1, 1, -1, -1, 1, 1, -1, 1, -1, 1, 1, 1, 1, 1, 1, -1, -1, 1, 1, -1, 1, -1, 1, 1, 1, 1, 1\} \quad (32\text{-}18)$$

$$LTF_{right} = \{1, -1, -1, 1, 1, -1, 1, -1, 1, -1, -1, -1, -1, -1, 1, 1, -1, -1, 1, -1, 1, -1, 1, 1, 1, 1, 1\} \quad (32\text{-}19)$$

NOTE 1— $LTF_{left}$ is identical to the leftmost 26 elements of Equation (17-8), and $LTF_{right}$ is identical to the rightmost 26 elements of Equation (17-8).

In a 10 MHz transmission, the NGV-LTF-1x sequence transmitted is given by Equation (32-20).

$$NGV\text{-}LTF_{-28,28} = \{1, 0, 1, 0, -1, 0, 1, 0, -1, 0, -1, 0, 1, 0, 1, 0, 1, 0, 1, 0, -1, 0, 1, 0, 1, 0, 1, 0, 1, 0, 0, 0, -1, 0, 1, 0, -1, 0, -1, 0, -1, 0, -1, 0, -1, 0, 1, 0, -1, 0, -1, 0, -1, 0, 1, 0, 1, 0, -1\} \quad (32\text{-}20)$$

In a 10 MHz transmission, the NGV-LTF-2x sequence transmitted is given by Equation (32-21).

$$\begin{aligned} NGV\text{-}LTF_{-28,28} &= \{1, 1, LTF_{left}, 0, LTF_{right}, -1, -1\} \\ &= VHT\text{-}LTF_{-28,28} \end{aligned} \quad (32\text{-}21)$$

This is an unapproved IEEE Standards Draft, subject to change.

where

$VHT\text{-}LTF_{-28,28}$ is defined in Equation (21-36).

In a 20 MHz transmission, the NGV-LTF-1x sequence transmitted is given by Equation (32-22).

$$NGV\text{-}LTF_{-58,58} = \{1, 0, -1, 0, 1, 0, -1, 0, -1, 0, 1, 0, 1, 0, 1, 0, -1, 0, 1, 0, 1, 0,$$
$$1, 0, 1, 0, 1, 0, -1, 0, 1, 0, -1, 0, -1, 0, -1, 0, -1, 0, -1, 0, 1, 0, -1, 0, -1, 0, -1, 0,$$
$$1, 0, 1, 0, -1, 0, 1, 0, 0, 0, -1, 0, 1, 0, 1, 0, -1, 0, 1, 0, -1, 0, -1, 0, 1, 0, 1, 0, 1, 0,$$
$$-1, 0, 1, 0, 1, 0, 1, 0, 1, 0, 1, 0, -1, 0, 1, 0, -1, 0, -1, 0, -1, 0, -1, 0, -1, 0, 1, 0, -1,$$
$$0, -1, 0, -1, 0, 1, 0, 1\} \quad (32\text{-}22)$$

In a 20 MHz transmission, the NGV-LTF-2x sequence transmitted is given by Equation (32-23).

$$NGV\text{-}LTF_{-58,58} = \{LTF_{left}, 1, LTF_{right}, -1, -1, -1, 1, 0, 0, 0, -1, 1, 1, -1, LTF_{left}, 1, LTF_{right}\} \quad (32\text{-}23)$$
$$= VHT\text{-}LTF_{-58,58}$$

where

$VHT\text{-}LTF_{-58,58}$ is defined in Equation (21-37).

NOTE 2—Equation (32-20), Equation (32-21), Equation (32-22), and Equation (32-23) do not show the phase rotation per 10 MHz subchannel.

The generation of the time domain NGV-LTF symbols is shown in Figure 32-9 (Generation of NGV-LTF symbols(11bd)).

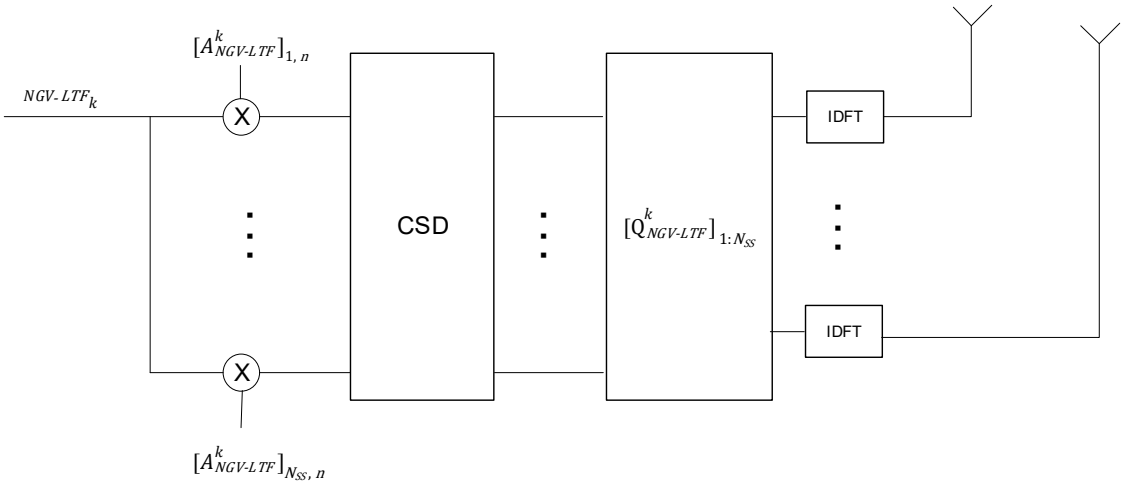

**Figure 32-9—Generation of NGV-LTF symbols(11bd)**

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

The generation of a time domain symbol of NGV-LTF-1x is equivalent to modulating every other tone in an OFDM symbol of 6.4 μs excluding GI, and then only transmit the first half of the OFDM symbol in the time domain, as shown in Figure 32-10 (Generation of NGV-LTF-1x symbols(11bd)).

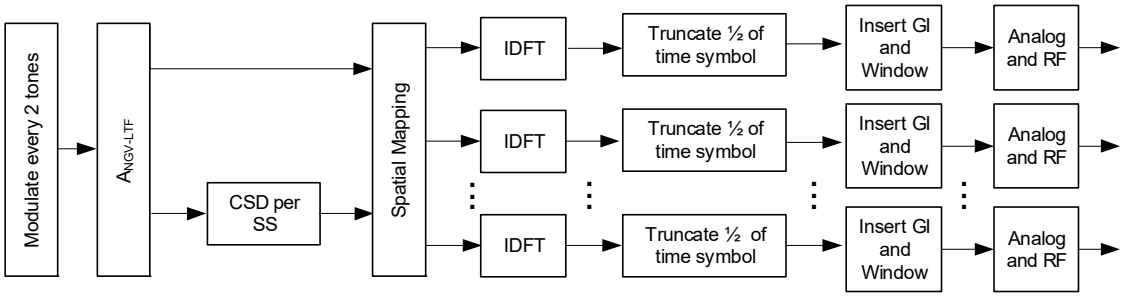

**Figure 32-10—Generation of NGV-LTF-1x symbols(11bd)**

NGV-LTF-2x-Repeat is constructed by repeating the time domain symbol of NGV-LTF-2x excluding GI and preappend one cyclic prefix of duration 1.6 μs.The generation of a time domain symbol of NGV-LTF-2x-Repeat is equivalent to modulating every tone in an OFDM symbol of 6.4 μs excluding GI, and then the OFDM symbol is repeated in the time domain, as shown in Figure 32-11 (Generation of NGV-LTF-2x-Repeat symbols(11bd)).

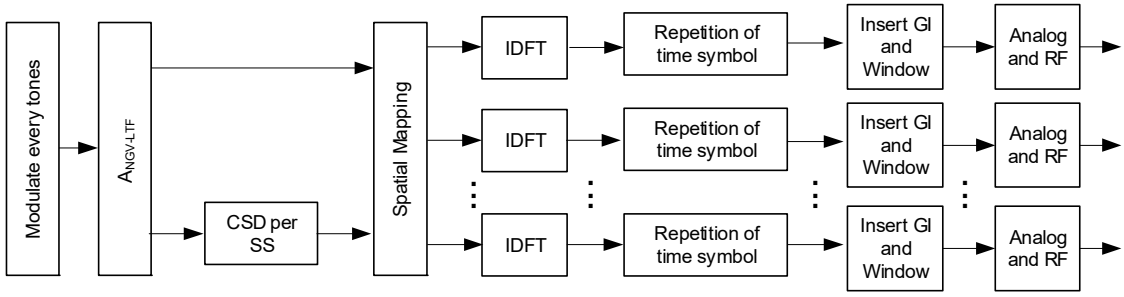

**Figure 32-11—Generation of NGV-LTF-2x-Repeat symbols(11bd)**

$A^k_{NGV\text{-}LTF}$ is given by Equation (32-24).

$$A^k_{NGV\text{-}LTF} = \begin{cases} R_{NGV\text{-}LTF}, \text{ if } k \in K_{pilot} \\ P_{NGV\text{-}LTF}, \text{ otherwise} \end{cases} \quad (32\text{-}24)$$

where

$K_{pilot}$ is the set of subcarrier indices for the pilot tones:

For a 10 MHz transmission, $K_{pilot} = \{\pm 8, \pm 22\}$

For a 20 MHz transmission, $K_{pilot} = \{\pm 12, \pm 26, \pm 54\}$

$R_{NGV\text{-}LTF}$ is an $N_{SS} \times N_{NGV\text{-}LTF}$ matrix whose elements are defined in Equation (32-25) and Equation (32-26)

$$[R_{NGV\text{-}LTF}]_{m,n} = [P_{NGV\text{-}LTF}]_{1,n}, \ 1 \le n \le N_{NGV\text{-}LTF}, \ 1 \le m \le N_{SS} \quad (32\text{-}25)$$

### 32.3.9 Data field

#### 32.3.9.1 General

The number of OFDM symbols in the Data field is determined by the Length field in L-SIG (see Equation (32-8)), the preamble duration, and the setting of the NGV-LTF and Midamble field in NGV-SIG (see 32.3.8 (NGV preamble)).

For LDPC encoding, the Data field shall consist of the SERVICE field, the PSDU, and the PHY pad bits. The padding flow is as follows. The MAC delivers a PSDU that fills the available octets in the Data field of the PPDU. The PHY determines the number of pad bits to add and appends them to the PSDU. The number of pad bits added always is 0 to 7. The PHY padding bits are calculated using Equation (32-28).

$$N_{PAD} = N_{SYM,init} N_{DBPS} - 8 \times \mathrm{PSDU\_LENGTH} - N_{service} \tag{32-28}$$

where

| | |
|---|---|
| PSDU_LENGTH | is defined in 32.4.3 (TXTIME and PSDU_LENGTH calculation) |
| $N_{SYM,init}$ | is given by Equation (21-62) with $m_{STBC} = 1$ |

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

#### 32.3.9.2 SERVICE field

The SERVICE field is as shown in Table 32-12 (SERVICE field(11bd)).

**Table 32-12—SERVICE field(11bd)**

| Bits | Field | **Description** |
|---|---|---|
| B0–B6 | Scrambler Initialization | Set to 0 |
| B7–B15 | Reserved | Set to 0 |

#### 32.3.9.3 Scrambler

The SERVICE, PSDU, and PHY pad parts of the Data field shall be scrambled by the scrambler defined in 17.3.5.5 (PHY DATA scrambler and descrambler). The Clause 17 (Orthogonal frequency division multiplexing (OFDM) PHY specification) TXVECTOR parameters CH_BANDWIDTH_IN_NON_HT and DYN_BANDWIDTH_IN_NON_HT are not present; therefore, the initial state of the scrambler is set to a pseudorandom nonzero seed.

#### 32.3.9.4 Coding

The Data field of an NGV PPDU shall be encoded using LDPC coding. The LDPC code and encoding process shall follow as described in 21.3.10.5.4 (LDPC coding)for a VHT SU PPDU with parameter $m_{STBC}$ set to 1 and the LDPC Extra Symbol field setting in NGV-SIG.

#### 32.3.9.5 Stream parser

After coding and puncturing, the data bit streams at the output of the FEC encoder are processed in groups of $N_{CBPS}$ bits. Each of these groups is rearranged into $N_{SS}$ blocks of $N_{CBPSS}$ bits. This operation is referred to as stream parsing and is described in 21.3.10.6 (Stream parser) for a SU transmission.

#### 32.3.9.6 Constellation mapping

The mapping between bits at the output of the stream parser and complex constellation points for BPSK, QPSK, 16-QAM, and 64-QAM follows the rules defined in 17.3.5.8 (Subcarrier modulation mapping) and 256-QAM follows the rules defined in 21.3.10.9 (Constellation mapping).

The streams of complex numbers out of constellation mapping are denoted as shown in Equation (32-29).

$$d_{k,m,n}, \quad 0 \le k \le N_{SD} - 1; \;\; 1 \le m \le N_{SS}; \;\; 0 \le n \le N_{SYM} - 1 \tag{32-29}$$

For NGV data portion modulated with NGV-MCS 15, the input stream is broken into groups of $N_{CBPS}$ bits $(B_0, B_1, \ldots, B_{N_{CBPS}-1})$. Each bit $B_k$ is BPSK modulated to a sample $d_k$. This generates the samples for the lower half of the data subcarriers as $d_{k,1,n} = d_k$. For the upper half of the subcarriers, the samples are generated as $d_{k+N_{SD},1,n} = d_{k,1,n} \times e^{j(k+N_{SD})\pi}$, with $k = 0, 1, \ldots, N_{SD} - 1$. The $N_{SD}$ here refers to the $N_{SD}$ for NGV-MCS 15, which is half the value of $N_{SD}$ for NGV-MCS 0.

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

#### 32.3.9.7 Pilot subcarriers

In a 10 MHz transmission, four pilot tones shall be inserted in subcarriers $k = \{-22, -8, 8, 22\}$. The pilot mapping $P_n^k$ for subcarrier $k$ for symbol $n$ shall be as specified in Equation (32-30).

$$\begin{aligned} P_n^{\{-22,\,-8,\,8,\,22\}} &= \{\Psi^{(1)}_{1,\,n \bmod 4} \;, \Psi^{(1)}_{1,\,(n+1) \bmod 4} \;, \Psi^{(1)}_{1,\,(n+2) \bmod 4} \;, \Psi^{(1)}_{1,\,(n+3) \bmod 4} \;\} \\ P_n^{k \neq \{-22,\,-8,\,8,\,22\}} &= 0 \end{aligned} \tag{32-30}$$

where

$\Psi^{(1)}_{1,m}$ is given by the $N_{STS} = 1$ row of Table 19-19 (Pilot values for 20 MHz transmission)

In a 20 MHz transmission, six pilot tones shall be inserted in subcarriers $k = \{-54, -26, -12, 12, 26, 54\}$. The pilot mapping $P_n^k$ for subcarrier $k$ for symbol $n$ shall be as specified in Equation (32-31).

$$\begin{aligned} P_n^{\{-54,\,-26,\,-12,\,12,\,26,\,54\}} &= \{\Psi^{(1)}_{1,\,n \bmod 6} \;, \Psi^{(1)}_{1,\,(n+1) \bmod 6} \;, \ldots, \Psi^{(1)}_{1,\,(n+5) \bmod 6} \;\} \\ P_n^{k \neq \{-54,\,-26,\,-12,\,12,\,26,\,54\}} &= 0 \end{aligned} \tag{32-31}$$

where

$\Psi^{(1)}_{1,m}$ is given by the $N_{STS} = 1$ row of Table 19-20 (Pilots values for 40 MHz transmission (excluding MCS 32))

The above pilot mapping shall be copied to all spatial streams before the spatial stream cyclic shifts are applied.

The pilot subcarrier locations in the NGV-LTF field for NGV-LTF-1x, NGV-LTF-2x, and NGV-LTF-2x-Repeat are the same as the pilot subcarrier locations in the Data field.

#### 32.3.9.8 OFDM modulation

##### 32.3.9.8.1 Transmission in NGV format

The time domain waveform of the Data field of an NGV PPDU from transmit chain $i_{TX}$, $1 \le i_{TX} \le N_{TX}$ shall be as defined in Equation (32-32) and Equation (32-33).

$$\begin{aligned} r^{(i_{TX})}_{NGV\text{-Data}}(t) = \sum_{n=0}^{N_{SYM}-1} & w_{T_{\text{SYM}}}\left(t - nT_{SYM} - \left\lfloor \frac{n}{M} \right\rfloor T_{MA}\right) q_n r^{(i_{TX})}_{NGV\text{-Data},n}\left(t - \left\lfloor \frac{n}{M} \right\rfloor T_{MA}\right) + \\ & \sum_{i_{MA}=0}^{N_{MA}-1} p_{i_{MA}} r^{(i_{TX})}_{NGV\text{-}LTF}(t - (i_{MA}+1)M \cdot T_{SYM} - i_{MA}T_{MA}) \end{aligned} \tag{32-32}$$

$$\begin{aligned} r^{(i_{TX})}_{NGV\text{-Data},n}(t) = \frac{1}{\sqrt{N^{Tone}_{NGV\text{-}Data}\;\; N_{SS}}} \sum_{k=-N_{SR}}^{N_{SR}} \sum_{m=1}^{N_{SS}} \Big( & \left[Q_k\right]_{i_{TX},\,m} \Upsilon_{k,BW} (D_{k,\,m,\,n,\,BW} + p_{n+4} P_n^k) \\ & \times \exp(j2\pi k \Delta_F (t - nT_{SYM} - T_{GI,\,Data} - T_{CS,\,NGV}(m))) \Big) \end{aligned} \tag{32-33}$$

where

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

| | |
|---|---|
| $r^{(i_{TX})}_{NGV\text{-Data},n}(t)$ | is the $n^{th}$ OFDM data symbol in the Data field, $0 \le n < N_{SYM} - 1$ |
| $M$ | is the midamble periodicity defined in 32.3.9.9 (Midambles) |
| $r^{(i_{TX})}_{NGV\text{-}LTF}(t)$ | is defined in Equation (32-27) |
| $T_{MA} = T_{NGV\text{-}LTF} N_{NGV\text{-}LTF}$ | is the duration of one midamble |
| $p_n$ | is defined in 17.3.5.10 (OFDM modulation) |

$$q_n = \begin{cases} 1, & \text{for } n < M \\ p_{\left\lfloor \frac{n-M}{M} \right\rfloor}, & \text{for } n \ge M \end{cases}$$

| | |
|---|---|
| $i_{MA}$ | is the index for the midambles, $0 \le i_{MA} \le N_{MA} - 1$ |
| $P^k_n$ | is defined in 32.3.9.7 (Pilot subcarriers) |
| $\Upsilon_{k,\,BW}$ | is defined in Equation (32-4) and Equation (32-5) |
| $D_{k,\,m,\,n,\,BW}$ | is the transmitted constellation at subcarrier $k$, spatial stream $m$, and Data field OFDM symbol $n$ and is defined in Equation (32-34) and Equation (32-35) |
| $N^{Tone}_{NGV\text{-}Data}$ | has the value given in Table 32-8 (Tone scaling factor and guard interval duration values for PHY fields(11bd)) |
| $T_{CS,\,NGV}(n)$ | is defined in Table 21-11 (Cyclic shift values for the VHT modulated fields of a PPDU) |
| $T_{GI,\,Data}$ | is the guard interval duration. $T_{GI,\,Data} = T_{GI}$ |

In a 10 MHz NGV PPDU transmission:

$$D_{k,\,m,\,n,\,10} = \begin{cases} 0, & k = 0, \pm 8, \pm 22 \\ d_{M^r_{10}(k),\,m,\,n}, & \text{otherwise} \end{cases} \tag{32-34}$$

where

$$M^r_{10}(k) = \begin{cases} k + 28, & -28 \le k \le -23 \\ k + 27, & -21 \le k \le -9 \\ k + 26, & -7 \le k \le -1 \\ k + 25, & 1 \le k \le 7 \\ k + 24, & 9 \le k \le 21 \\ k + 23, & 23 \le k \le 28 \end{cases}$$

In a 20 MHz NGV PPDU transmission:

$$D_{k,\,m,\,n,\,20} = \begin{cases} 0, & k = 0, \pm 12, \pm 26, \pm 54 \\ d_{M^r_{20}(k),\,m,\,n}, & \text{otherwise} \end{cases} \tag{32-35}$$

where

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

$$M^{r}_{20}(k) = \begin{cases} k+58, & -58 \le k \le -55 \\ k+57, & -53 \le k \le -27 \\ k+56, & -25 \le k \le -13 \\ k+55, & -11 \le k \le -2 \\ k+52, & 2 \le k \le 11 \\ k+51, & 13 \le k \le 25 \\ k+50, & 27 \le k \le 53 \\ k+49, & 55 \le k \le 58 \end{cases}$$

$Q_k$ is a spatial mapping/steering matrix with $N_{TX}$ rows and $N_{SS}$ columns for subcarrier $k$. $Q_k$ may be frequency dependent. Refer to the examples of $Q_k$ listed in 19.3.11.11.2 (Spatial mapping) for examples of $Q_k$ that could be used for NGV PPDU.

NOTE—Implementations are not restricted to the spatial mapping matrix examples listed in 19.3.11.11.2 (Spatial mapping) and the number of transmit chains $N_{TX}$ could be more than one. The beamforming steering matrices are implementation specific.

### 32.3.9.9 Midambles

An NGV STA shall include midambles in an NGV PPDU transmission when the number of midamble periods, $N_{MA}$, is greater than zero in accordance with Equation (32-36). Midambles facilitate updating of the channel estimate during the NGV PPDU reception.

Midambles are present in the Data field of the NGV PPDU every $M$ OFDM symbols, where $M$ is either 4, 8, or 16 as indicated by the Midamble Periodicity field in the NGV-SIG field (see Table 32-10 (Fields in the NGV-SIG field(11bd))).

The Midamble field shall use the same format as the NGV-LTF field of the same PPDU, which format is signalled in the NGV-SIG field. The generation of midamble is defined in 32.3.8.10 (NGV-LTF definition).

The midambles and succeeding Data field OFDM symbols shall be randomized to prevent the generation of spectral lines in the NGV PPDU spectrum. The $n$th midamble and $M$ Data field OFDM symbols following immediately after the $n$th midamble shall be multiplied by $p_n$, $n = 0, \ldots, N_{MA} - 1$, where $p_n$ is defined in 17.3.5.10 (OFDM modulation). The midamble and the randomization procedure in an NGV PPDU are shown in Figure 32-12 (NGV PPDU with midamble and randomization procedure(11bd)).

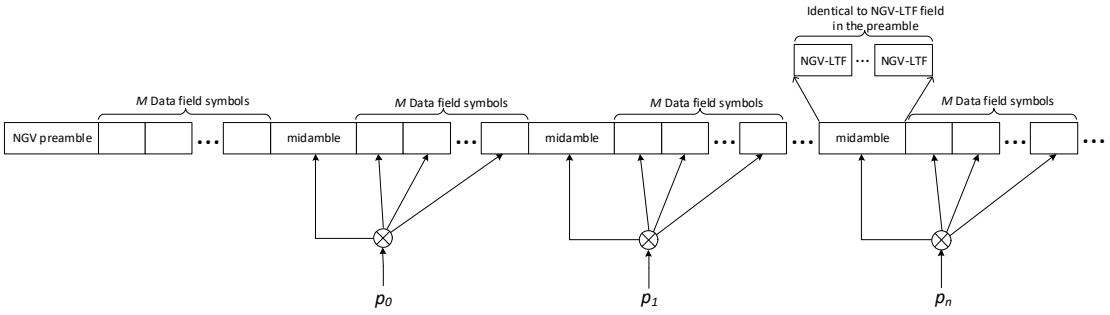

**Figure 32-12—NGV PPDU with midamble and randomization procedure(11bd)**

If present, the number of midamble periods, $N_{MA}$, in a PPDU is calculated using Equation (32-36).

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

$$N_{MA} = \left\lfloor \frac{N_{SYM} - 1}{M} \right\rfloor \quad (32\text{-}36)$$

where $N_{SYM}$ is the total number of data symbols in the Data field, is given in 21.3.10.5.4 (LDPC coding), and computed using Equation (19-41) in step d) of 19.3.11.7.5 (LDPC PPDU encoding process).

As shown in Figure 32-12 (NGV PPDU with midamble and randomization procedure(11bd)), the first midamble is inserted immediately after the *M*th OFDM symbol in the Data field, and a midamble is not inserted after the last data OFDM symbol if mod ($N_{SYM}$, $M$) = 0.

### 32.3.9.10 Non-NGV duplicate transmission

When the TXVECTOR parameter FORMAT is NON_NGV_10 and the TXVECTOR parameter NON_NGV_MODULATION is NON_NGV_10_DUP_OFDM, the transmitted PPDU is a non-NGV duplicate. Non-NGV duplicate transmission is used to transmit to STAs that support non-NGV OFDM and may be present in a part of a 20 MHz channel (see Table 32-2 (Interpretation of FORMAT, NON_NGV_MODULATION, and CH_BANDWIDTH parameters(11bd))). The RL-SIG, NGV-SIG, RNGV-SIG, NGV-STF, and NGV-LTF fields are not transmitted. The L-STF, L-LTF, and L-SIG fields shall be transmitted in the same way as in the NGV transmission, except that the L-SIG field's Rate and Length fields shall be as defined in 17.3.4 (SIGNAL field). The Data field shall be as defined in Equation (32-37).

NOTE—For L-STF and L-LTF fields, the power scale factor is 1 in 20 MHz non-NGV duplicate PPDU.

$$r^{(i_{TX})}_{\text{Non-NGV-Data}}(t) = \frac{1}{\sqrt{N_{TX} N^{Tone}_{\text{NON\_NGV\_10\_DUP\_OFDM-Data}}}} \sum_{n=0}^{N_{SYM}-1} w_{T_{\text{SYM}}}(t - nT_{SYM}) \quad (32\text{-}37)$$

$$\times \sum_{k=-26}^{26} (D_{k,n} + p_{n+1}P_k)(\exp(j2\pi(k-32)\Delta_F(t - nT_{SYM} - T_{GI} - T^{i_{TX}}_{CS}))$$

$$+ j \times \exp(j2\pi(k+32)\Delta_F(t - nT_{SYM} - T_{GI} - T^{i_{TX}}_{CS})))$$

where

$P_k$ and $p_n$ are defined in 17.3.5.10 (OFDM modulation)

$$D_{k,n} = \begin{cases} 0, & k = 0, \pm 7, \pm 21 \\ d_{M^r_{10}(k),1,n}, & \text{otherwise} \end{cases} \quad (32\text{-}38)$$

$M^r_{10}(k)$ is defined in Equation (32-10)

$T^{i_{TX}}_{CS}$ represents the cyclic shift of the transmit chain $i_{TX}$ and is defined in 32.3.8.2.1 (Cyclic shift for pre-NGV modulated fields)

$N^{Tone}_{\text{NON\_NGV\_10\_DUP\_OFDM-Data}}$ has the value given in Table 32-8 (Tone scaling factor and guard interval duration values for PHY fields(11bd))

## 32.3.10 SU-MIMO

SU-MIMO is defined for an NGV transmitter to transmit two spatial streams to an NGV receiver to improve throughput.

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

An NGV transmitter equipped with more than one antenna may use the SU-MIMO technique to transmit an NGV PPDU with two spatial streams. The choice of number of spatial streams is described in 31.5 (NGV MAC data service).

The steering matrix $Q_k$, defined in 32.3.7.3 (Transmitted signal), used by the transmitter is implementation specific.

NOTE—The channel in the vehicular environment is fast-varying, so a SU-MIMO transmitter cannot obtain accurate channel information through sounding. Therefore, there is no explicit sounding protocol defined for an NGV transmitter to obtain the channel information prior to the transmission.

### 32.3.11 Transmit specification

#### 32.3.11.1 Transmit spectrum mask

The transmit spectrum mask by regulatory domain is defined in Annex D and Annex E.

For any STA transmitting a 10 MHz NGV PPDU, the transmit spectrum mask is defined in 17.3.9.3 (Transmit spectrum mask).

For any STA using 20 MHz channel spacing and transmitting a 20 MHz NGV PPDU or 20 MHz non-NGV duplicate PPDU, the transmitted spectral density shall have a 0 dBr bandwidth not exceeding 19 MHz and shall not exceed the spectrum mask created using the permitted power spectral density levels listed in Table 32-13 (Spectrum mask data for 20 MHz channel spacing(11bd)).

The transmission of a 20 MHz NGV PPDU or 20 MHz non-NGV duplicate PPDU shall meet transmit spectrum mask C2 regardless of the transmit power class to which the STA belongs.

NOTE 1—In the presence of additional regulatory restrictions, the device needs to meet both the regulatory requirements and the mask defined in this subclause.

NOTE 2—For rules regarding TX center frequency leakage levels, see 32.3.11.4.2 (Transmitter center frequency leakage). The spectral mask requirements in this subclause do not apply to the RF LO.

**Table 32-13—Spectrum mask data for 20 MHz channel spacing(11bd)**

| STA transmit power class | Permitted power spectral density, dBr | | | | |
|---|---|---|---|---|---|
| | ± 9.5 MHz offset (±f1) | ± 10.0 MHz offset (±f2) | ± 10.5 MHz offset (±f3) | ± 15 MHz offset (±f4) | ± 25 MHz offset (±f5) |
| Any Class | 0 | –26 | –32 | –40 | –50 |

#### 32.3.11.2 Spectral flatness

Spectral flatness measurements shall be conducted using BPSK modulated PPDUs. Demodulate the PPDUs according to the following (or equivalent) procedure:

a) Start of PPDU shall be detected.
b) Transition from L-STF to L-LTF shall be detected and fine timing shall be established.
c) Coarse and fine frequency offsets shall be estimated.
d) Symbols in a PPDU shall be derotated according to estimated frequency offset.

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

e) For each NGV-LTF symbol, transform the symbol into subcarrier received values, estimate the phase from the pilot subcarriers, and derotate the subcarrier values according to the estimated phase.

f) For each of the data OFDM symbols: transform the symbol into subcarrier received values.

The spectral flatness test shall be performed over at least 20 PPDUs. The PPDUs under test shall be at least 16 data OFDM symbols long.

Evaluate spectral flatness using the subcarrier received values or the magnitude of the channel estimation.

Let $E_{i,avg}$ denote the magnitude of the channel estimation on subcarrier $i$ or the average constellation energy of a BPSK modulated subcarrier $i$ in an NGV data symbol.

For the spectral flatness test, the transmitting STA shall be configured to use a spatial mapping matrix $Q_k$ (see 32.3.9.8 (OFDM modulation)) with flat frequency response. Each output port under test of the transmitting STA shall be connected through a cable to one input port of the testing instrumentation. The requirements are defined in Table 32-14 (Maximum transmit spectral flatness deviations(11bd)) and apply to both 10 MHz and 20 MHz transmissions.

**Table 32-14—Maximum transmit spectral flatness deviations(11bd)**

| Format | Bandwidth of transmission (MHz) | Average subcarrier indices (inclusive) | Tested subcarrier indices (inclusive) | Maximum deviation (dB) |
|---|---|---|---|---|
| NGV | 10 | –16 to –1 and +1 to +16 | –16 to –1 and +1 to +16 | ±4 |
| | | | –28 to –17 and +17 to +28 | +4/–6 |
| | 20 | –42 to –2 and +2 to +42 | –42 to –2 and +2 to +42 | ±4 |
| | | | –58 to –43 and +43 to +58 | +4/–6 |

### 32.3.11.3 Transmit center frequency and symbol clock frequency tolerance

The symbol clock frequency and transmit center frequency tolerance shall be ±20 ppm maximum. The transmit center frequency and the symbol clock frequency for all transmit antennas and frequency segments shall be derived from the same reference oscillator.

### 32.3.11.4 Modulation accuracy

#### 32.3.11.4.1 Introduction to modulation accuracy tests

Transmit modulation accuracy specifications are described in 32.3.11.4.2 (Transmitter center frequency leakage) and 32.3.11.4.3 (Transmitter constellation error). The test method is described in 32.3.11.4.4 (Transmitter modulation accuracy (EVM) test).

#### 32.3.11.4.2 Transmitter center frequency leakage

TX LO leakage shall meet the following requirements for all bandwidths:

— When the RF LO is in the center of the transmitted PPDU BW, the power measured at the center of transmission BW using resolution BW 156.25 kHz shall not exceed the average power per subcarrier of the transmitted PPDU, or equivalently, $(P - 10\log(N_{ST}))$, where $P$ is the transmit power per antenna in dBm, and $N_{ST}$ is defined in Table 32-6 (Timing related constants(11bd)).

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

— When the RF LO is not at the center of the transmitted PPDU BW, the power measured at the location of the RF LO using resolution BW 156.25 kHz shall not exceed the maximum of –32 dB relative to the total transmit power and –20 dBm, or equivalently $\max(P-32,-20)$, where $P$ is the transmit power per antenna in dBm.

The transmit center frequency leakage is specified per antenna.

#### 32.3.11.4.3 Transmitter constellation error

The relative constellation RMS error, calculated by first averaging over subcarriers, NGV PPDUs, and spatial streams (see Equation (19-89)) shall not exceed a data-rate dependent value according to Table 32-15 (Allowed relative constellation error versus constellation size and coding rate(11bd)). The number of spatial streams under test shall be equal to the number of utilized transmitting STA antenna (output) ports and also equal to the number of utilized testing instrumentation input ports. In the test, $N_{SS} = N_{STS}$ (no STBC) shall be used and no beamforming steering matrix shall be used. Each output port of the transmitting STA shall be connected through a cable to one input port of the testing instrumentation. The requirements apply to both 10 MHz and 20 MHz transmissions.

#### 32.3.11.4.4 Transmitter modulation accuracy (EVM) test

The transmit modulation accuracy test shall be performed by instrumentation capable of converting the transmitted signals into a stream of complex samples at a sampling rate greater than or equal to the bandwidth of the signal being transmitted.

In this case, transmit modulation accuracy shall meet the required value in Table 32-15 (Allowed relative constellation error versus constellation size and coding rate(11bd)) using only the subcarriers within the channel width.

**Table 32-15—Allowed relative constellation error versus constellation size and coding rate(11bd)**

| Modulation | Coding rate | Relative constellation error (dB) |
|---|---|---|
| BPSK-DCM | 1/2 | –5 |
| BPSK | 1/2 | –5 |
| QPSK | 1/2 | –10 |
| QPSK | 3/4 | –13 |
| 16-QAM | 1/2 | –16 |
| 16-QAM | 3/4 | –19 |
| 64-QAM | 2/3 | –22 |
| 64-QAM | 3/4 | –25 |
| 64-QAM | 5/6 | –27 |
| 256-QAM | 3/4 | –30 |
| 256-QAM | 5/6 | –32 |

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

The instrument shall have sufficient accuracy in terms of I/Q arm amplitude and phase balance, DC offsets, phase noise, and analog to digital quantization noise. A possible embodiment of such a setup is converting the signals to a low IF frequency with a microwave synthesizer, sampling the signal with a digital oscilloscope and decomposing it digitally into quadrature components. The sampled signal shall be processed in a manner similar to an actual receiver, according to the following steps, or equivalent procedure:

a) Start of PPDU shall be detected.

b) Transition from L-STF to L-LTF shall be detected and fine timing shall be established.

c) Coarse and fine frequency offsets shall be estimated.

d) Symbols in a PPDU shall be derotated according to estimated frequency offset.

e) For each NGV-LTF symbol, transform the symbol into subcarrier received values, estimate the phase from the pilot subcarriers, and derotate the subcarrier values according to the estimated phase.

f) Estimate the complex channel response coefficient for each of the subcarriers and each of the transmit streams. If midambles are present in the Data field of the PPDU, the channel response coefficients shall be based upon the most recently received midamble symbols.

g) For each of the data OFDM symbols: transform the symbol into subcarrier received values, estimate the phase from the pilot subcarriers, derotate the subcarrier values according to the estimated phase, group the results from all of the receiver chains in each subcarrier to a vector, and multiply the vector by a zero-forcing equalization matrix generated from the estimated channel.

h) For each data-carrying subcarrier in each spatial stream, find the closest constellation point and compute the Euclidean distance from it. If midambles are present in the Data field of the PPDU, the midamble symbols shall not be used to compute the Euclidean distance.

i) Compute the average across PPDUs of the RMS of all errors per PPDU as given by Equation (19-89).

The test shall be performed over at least 20 PPDUs [$N_f$ as defined in Equation (19-89)]. The PPDUs under test shall be at least 16 data OFDM symbols long. Random data shall be used for the symbols.

#### 32.3.11.4.5 Time of departure accuracy

The time of departure accuracy test evaluates TIME_OF_DEPARTURE against aTxPHYTxStartRMS and aTxPHYTxStartRMS against TIME_OF_DEPARTURE_ACCURACY_TEST_THRESH as defined in Annex P with the following test parameters:

— MULTICHANNEL_SAMPLING_RATE is:

$10 \times 10^6 \left(1 + \left\lceil \frac{f_H - f_L}{10\ \text{MHz}} \right\rceil\right)$ sample/s, for a CH_BANDWIDTH parameter equal to CBW10

$20 \times 10^6 \left(1 + \left\lceil \frac{f_H - f_L}{10\ \text{MHz}} \right\rceil\right)$ sample/s, for a CH_BANDWIDTH parameter equal to CBW20

where

$f_H$ is the nominal center frequency in Hz of the highest channel in the channel set

$f_L$ is the nominal center frequency in Hz of the lowest channel in the channel set. The channel set is the set of channels used for transmitting measurement frames, the channel set comprises channels uniformly spaced across $f_H - f_L \leq 50$ MHz.

— FIRST_TRANSITION_FIELD is L-STF.

— SECOND_TRANSITION_FIELD is L-LTF.

— TRAINING_FIELD is the long symbols windowed in a manner that should approximate the windowing described in 17.3.2.5 (Mathematical conventions in the signal descriptions) with $T_{TR}$ = 100 ns for 20 MHz channel spacing, $T_{TR}$ = 200 ns for 10 MHz channel spacing.

— TIME_OF_DEPARTURE_ACCURACY_TEST_THRESH is 80 ns.

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

NOTE—The indicated windowing applies to the time of departure accuracy test equipment, and not the transmitter or receiver.

### 32.3.12 Receiver specification

#### 32.3.12.1 General

For receiver minimum input sensitivity, adjacent channel rejection, nonadjacent channel rejection, receiver maximum input level, and CCA sensitivity requirements described in this subclause, the input levels are measured at the antenna connector and are referenced as the average power per receive antenna. The number of spatial streams under test shall be equal to the number of utilized transmitting STA antenna (output) ports and also equal to the number of utilized device under test input ports. Each output port of the transmitting STA shall be connected through a cable to one input port of the device under test.

The requirements on receiver minimum input sensitivity in 32.3.12.2 (Receiver minimum input sensitivity), adjacent channel rejection in 32.3.12.3 (Adjacent channel rejection), and nonadjacent channel rejection in 32.3.12.4 (Nonadjacent channel rejection) apply to NGV PPDUs. NGV-LTF-2x-Repeat format is used if the NGV PPDUs are modulated with NGV-MCS 15 and $N_{SS} = 1$ in 10 MHz, otherwise, NGV-LTF-2x format is used.

NOTE—Similar receiver minimum input sensitivity requirements, adjacent channel rejection requirements, and nonadjacent channel rejection requirements are defined for VHT PPDUs specified in 21.3.18 (VHT receiver specification).

#### 32.3.12.2 Receiver minimum input sensitivity

The packet error ratio (PER) shall be less than 10% for a PSDU with the rate dependent input levels listed in Table 32-16 (Receiver minimum input level sensitivity(11bd)). The PSDU length shall be 2048 octets for BPSK-DCM or 4096 octets for all other modulations.

**Table 32-16—Receiver minimum input level sensitivity(11bd)**

| Modulation | Rate (R) | Minimum sensitivity (10 MHz PPDU) (dBm) | Minimum sensitivity (20 MHz PPDU) (dBm) |
|---|---|---|---|
| BPSK-DCM | 1/2 | –88 | –82 |
| BPSK | 1/2 | –85 | –82 |
| QPSK | 1/2 | –82 | –79 |
| QPSK | 3/4 | –80 | –77 |
| 16-QAM | 1/2 | –77 | –74 |
| 16-QAM | 3/4 | –73 | –70 |
| 64-QAM | 2/3 | –69 | –66 |
| 64-QAM | 3/4 | –68 | –65 |
| 64-QAM | 5/6 | –67 | –64 |
| 256-QAM | 3/4 | –62 | –59 |
| 256-QAM | 5/6 | N/A | –57 |

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

### 32.3.12.3 Adjacent channel rejection

Adjacent channel rejection for *W* MHz channels (where *W* is 10 or 20) shall be measured by setting the desired signal's strength 3 dB above the rate-dependent sensitivity specified in 32.3.12.2 (Receiver minimum input sensitivity) and raising the power of the interfering signal of *W* MHz bandwidth until 10% PER is caused for a PSDU length of 2048 octets for BPSK-DCM or 4096 octets for all other modulations. The difference in power between the signals in the interfering channel and the desired channel is the corresponding adjacent channel rejection. The center frequency of the adjacent channel shall be placed *W* MHz away from the center frequency of the desired signal.

The interfering signal in the adjacent channel shall be a signal compliant with the NGV PHY, unsynchronized with the signal in the channel under test, and shall have a minimum duty cycle of 50%. The corresponding rejection shall be no less than specified in Table 32-17 (Minimum required adjacent and nonadjacent channel rejection level(11bd)).

**Table 32-17—Minimum required adjacent and nonadjacent channel rejection level(11bd)**

| Modulation | Rate (R) | Adjacent channel rejection (dB) (10 MHz/20 MHz PPDU) | Nonadjacent channel rejection (dB) (10 MHz/20 MHz PPDU) |
|---|---|---|---|
| BPSK-DCM | 1/2 | 19 (10 MHz), 16 (20 MHz) | 35 (10 MHz), 32 (20 MHz) |
| BPSK | 1/2 | 16 | 32 |
| QPSK | 1/2 | 13 | 29 |
| QPSK | 3/4 | 11 | 27 |
| 16-QAM | 1/2 | 8 | 24 |
| 16-QAM | 3/4 | 4 | 20 |
| 64-QAM | 2/3 | 0 | 16 |
| 64-QAM | 3/4 | –1 | 15 |
| 64-QAM | 5/6 | –2 | 14 |
| 256-QAM | 3/4 | –7 | 9 |
| 256-QAM | 5/6 | –9 | 7 |
| NOTE—The values defined for 256-QAM with 5/6 coding rate only apply to 20 MHz channel. | | | |

An optional enhanced performance specification is provided for systems requiring improved immunity to out-of-channel interfering emissions. If a STA has dot11ACRType equal to 2, the adjacent channel rejection shall be no less than specified in Table 32-18 (Optional enhanced minimum required adjacent and nonadjacent channel rejection level(11bd)). The interfering signal in the adjacent channel shall be a signal compliant with the NGV PHY, using class C transmit mask for 10 MHz channel and C2 transmit mask for 20 MHz channel (see D.2.2 (Transmit power levels)), unsynchronized with the signal in the channel under test. The corresponding minimum receiver sensitivities for each modulation and coding rate are the same as in Table 32-16 (Receiver minimum input level sensitivity(11bd)).

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

**Table 32-18—Optional enhanced minimum required adjacent and nonadjacent channel rejection level(11bd)**

| Modulation | Rate (R) | Adjacent channel rejection (dB) (10 MHz/20 MHz PPDU) | Nonadjacent channel rejection (dB) (10 MHz/20 MHz PPDU) |
|---|---|---|---|
| BPSK-DCM | 1/2 | 31 (10 MHz), 28 (20 MHz) | 45 (10 MHz), 42 (20 MHz) |
| BPSK | 1/2 | 28 | 42 |
| QPSK | 1/2 | 25 | 39 |
| QPSK | 3/4 | 23 | 37 |
| 16-QAM | 1/2 | 20 | 34 |
| 16-QAM | 3/4 | 16 | 30 |
| 64-QAM | 2/3 | 12 | 26 |
| 64-QAM | 3/4 | 11 | 25 |
| 64-QAM | 5/6 | 10 | 24 |
| 256-QAM | 3/4 | 5 | 19 |
| 256-QAM | 5/6 | 3 | 17 |
| NOTE—The values defined for 256-QAM with 5/6 coding rate only apply to 20 MHz channel. | | | |

### 32.3.12.4 Nonadjacent channel rejection

Nonadjacent channel rejection for *W* MHz channels (where *W* is 10 or 20) shall be measured by setting the desired signal's strength 3 dB above the rate-dependent sensitivity specified in Table 32-16 (Receiver minimum input level sensitivity(11bd)), and raising the power of the interfering signal of *W* MHz bandwidth until a 10% PER occurs for a PSDU length of 2048 octets for BPSK-DCM or 4096 octets for all other modulations. The difference in power between the signals in the interfering channel and the desired channel is the corresponding nonadjacent channel rejection. The nonadjacent channel rejection shall be met with any nonadjacent channels located at least 2 × *W* MHz away from the center frequency of the desired signal.

The interfering signal in the nonadjacent channel shall be a signal compliant with the NGV PHY, unsynchronized with the signal in the channel under test, and shall have a minimum duty cycle of 50%. The corresponding rejection shall be no less than specified in Table 32-17 (Minimum required adjacent and nonadjacent channel rejection level(11bd)).

An optional enhanced performance specification is provided for systems requiring improved immunity to out-of-channel interfering emissions. If a STA has dot11ACRType equal to 2, the nonadjacent channel rejection shall be no less than specified in Table 32-18 (Optional enhanced minimum required adjacent and nonadjacent channel rejection level(11bd)). The interfering signal in the nonadjacent channel shall be a signal compliant with the NGV PHY, using class C transmit mask for 10 MHz channel and C2 transmit mask for 20 MHz channel (see D.2.2 (Transmit power levels)), unsynchronized with the signal in the channel under test. The corresponding minimum receiver sensitivities for each modulation and coding rate are the same as in Table 32-16 (Receiver minimum input level sensitivity(11bd)).

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

#### 32.3.12.5 Receiver maximum input level

The receiver shall provide a maximum PER of 10% at a PSDU length of 2048 octets for BPSK-DCM or 4096 octets for all other modulations, for a maximum input level of –30 dBm, measured at each antenna connector for any baseband NGV modulation.

#### 32.3.12.6 CCA sensitivity

##### 32.3.12.6.1 General

The thresholds in this subclause are compared with the signal level at each receiving antenna.

##### 32.3.12.6.2 CCA sensitivity for signals occupying the primary 10 MHz channel

An NGV STA with a *W* MHz operating channel width shall detect, with > 90% probability, the start of a PPDU that occupies at least the primary 10 MHz channel in an otherwise idle *W* MHz operating channel width, and issue a PHY CCA.indication(BUSY, {primary}) primitive within a period of aCCATime (see 17.4.4 (OFDM PHY)) if one of the following conditions is met:

— The start of a NON_NGV_10 PPDU as defined in 17.3.10.6 (CCA requirements).

— The start of a 20 MHz non-NGV duplicate or NGV PPDU for which the power measured within the primary 10 MHz channel is above –85 dBm.

The CCA signal shall be held busy (PHY-CCA.indication(BUSY, {primary}) primitive) for the duration of the PPDU.

The receiver shall issue a PHY-CCA.indication(BUSY, {primary}) primitive for any signal that exceeds a threshold of –65 dBm in the primary 10 MHz channel within a period of aCCATime after the signal arrives at the receiver's antenna(s); then the receiver shall not issue a PHY-CCA.indication(BUSY, {secondary}), or PHYCCA.indication(IDLE) primitive while the threshold continues to be exceeded.

##### 32.3.12.6.3 CCA sensitivity for signals not occupying the primary 10 MHz channel

The PHY shall issue a PHY-CCA.indication(BUSY, {secondary}) primitive if the conditions for issuing a PHY-CCA.indication(BUSY, {primary}) primitive are not present and one of the following conditions are present in an otherwise idle 20 MHz operating channel width:

— Any signal within the secondary 10 MHz channel at or above a threshold of –65 dBm within a period of aCCATime after the signal arrives at the receiver's antenna(s); then the PHY shall not issue a PHY-CCA.indication(IDLE) primitive while the threshold continues to be exceeded.

— A 10 MHz NON_NGV, or NGV PPDU detected in the secondary 10 MHz channel at or above –85 dBm with > 90% probability within a period aCCAMidTime (see 32.4.4 (NGV PHY)).

#### 32.3.13 NGV transmit procedure

There are two paths for the transmit PHY procedure:

— The first path, for which typical transmit procedures are shown in Figure 32-13 (PHY transmit procedure for NGV transmission(11bd)), is selected if the FORMAT parameter of the PHY-TXSTART.request(TXVECTOR) primitive is NGV. These transmit procedures do not describe the operation of optional features, such as SU-MIMO.

— The second path is selected if the FORMAT parameter of the PHY-TXSTART.request(TXVECTOR) primitive is NON_NGV_10. Transmit parameter N_PPDU_REP is set via the PHY service interface using the PHY-TXSTART.request(TXVECTOR) primitive, as

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

described in Table 32-1 (TXVECTOR and RXVECTOR parameters(11bd)) to indicate the number of repetitions of NON_NGV_10 PPDU transmission.

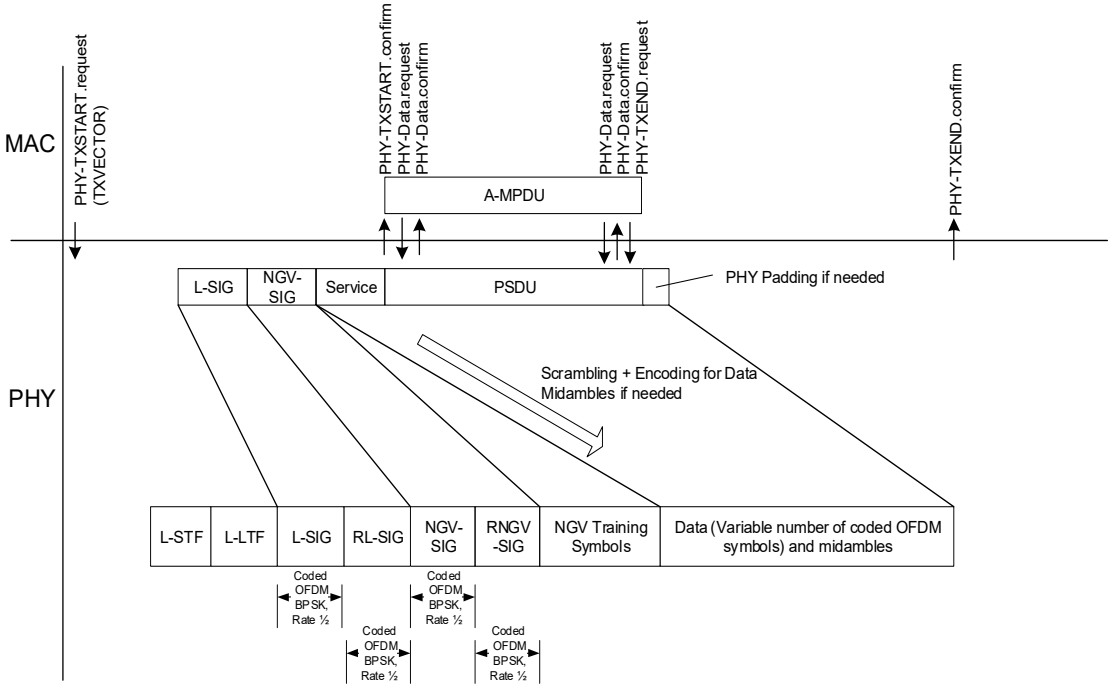

**Figure 32-13—PHY transmit procedure for NGV transmission(11bd)**

In the second path, the transmission follows the transmit procedure in Clause 17 (Orthogonal frequency division multiplexing (OFDM) PHY specification) except that the signal referred to in Clause 17 (Orthogonal frequency division multiplexing (OFDM) PHY specification) is instead generated with the Duration/ID field to report transmitter is an NGV STA as defined in 31.2.1 (Coexistence with non-NGV STAs). If N_PPDU_REP is nonzero, the first NON_NGV_10 PPDU may be stored in the memory, and the same PPDU is transmitted N_PPDU_REP times after the initial transmission, with each repetition occurring after a SIFS following the previous NON_NGV_10 PPDU transmission.

In both paths, in order to transmit data, the MAC generates a PHY-TXSTART.request primitive, that causes the PHY entity to enter the transmit state. Further, the PHY is set to operate at the appropriate frequency through station management via PLME, as specified in 32.4 (NGV PLME). Other transmit parameters, such as NGV-MCS, Coding types, and transmit power, are set via the PHY SAP using the PHY-TXSTART.request(TXVECTOR) primitive, as described in Table 32-1 (TXVECTOR and RXVECTOR parameters(11bd)). The remainder of the clause applies to the first path.

Transmission of the PPDU shall be initiated by the PHY after receiving the PHY-TXSTART.request(TXVECTOR) primitive. The TXVECTOR parameters for the PHY-TXSTART.request primitive are specified in Table 32-1 (TXVECTOR and RXVECTOR parameters(11bd)).

Transmission of the PHY preamble shall start immediately provided that TIME_OF_DEPARTURE_REQUESTED is true, based on the parameters passed in the PHY-TXSTART.request primitive.

After the PHY preamble transmission is started, the PHY entity immediately initiates data scrambling and data encoding. The encoding method for the Data field is based on the CH_BANDWIDTH, NUM_SS, and NGV-MCS parameters of the TXVECTOR, as described in 32.3.2 (NGV PPDU format).

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

The SERVICE field and PSDU are scrambled and encoded as described in 32.3.3 (Transmitter block diagram). The data shall be exchanged between the MAC and the PHY through a series of PHY-DATA.request(DATA) primitives issued by the MAC, and PHY-DATA.confirm primitives issued by the PHY. PHY padding bits are appended to the PSDU to make the number of bits in the coded SERVICE field and PSDU an integer multiple of the number of coded bits per OFDM symbol. Midambles are inserted every *M* OFDM symbols if present, where *M* is indicated by the Midamble Periodicity field in the NGV-SIG field.

Transmission can be prematurely terminated by the MAC through the PHY-TXEND.request primitive. PSDU transmission is terminated by receiving a PHY-TXEND.request primitive. Each PHY-TXEND.request primitive is acknowledged with a PHY-TXEND.confirm primitive from the PHY. Normal termination occurs after the transmission of the final bit of the last PSDU octet, according to the number of OFDM symbols indicated by $N_{SYM}$ (see 21.3.10.5.4 (LDPC coding)).

In the PHY, the GI is inserted in every data OFDM symbol as a countermeasure against delay spread.

When the PPDU transmission is completed the PHY entity enters the receive state.

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

A typical state machine implementation of the transmit PHY is provided in Figure 32-14 (PHY transmit state machine(11bd)). Request (.request) and confirmation (.confirm) primitives are issued as shown. This state machine does not describe the operation of optional features, such as SU-MIMO.

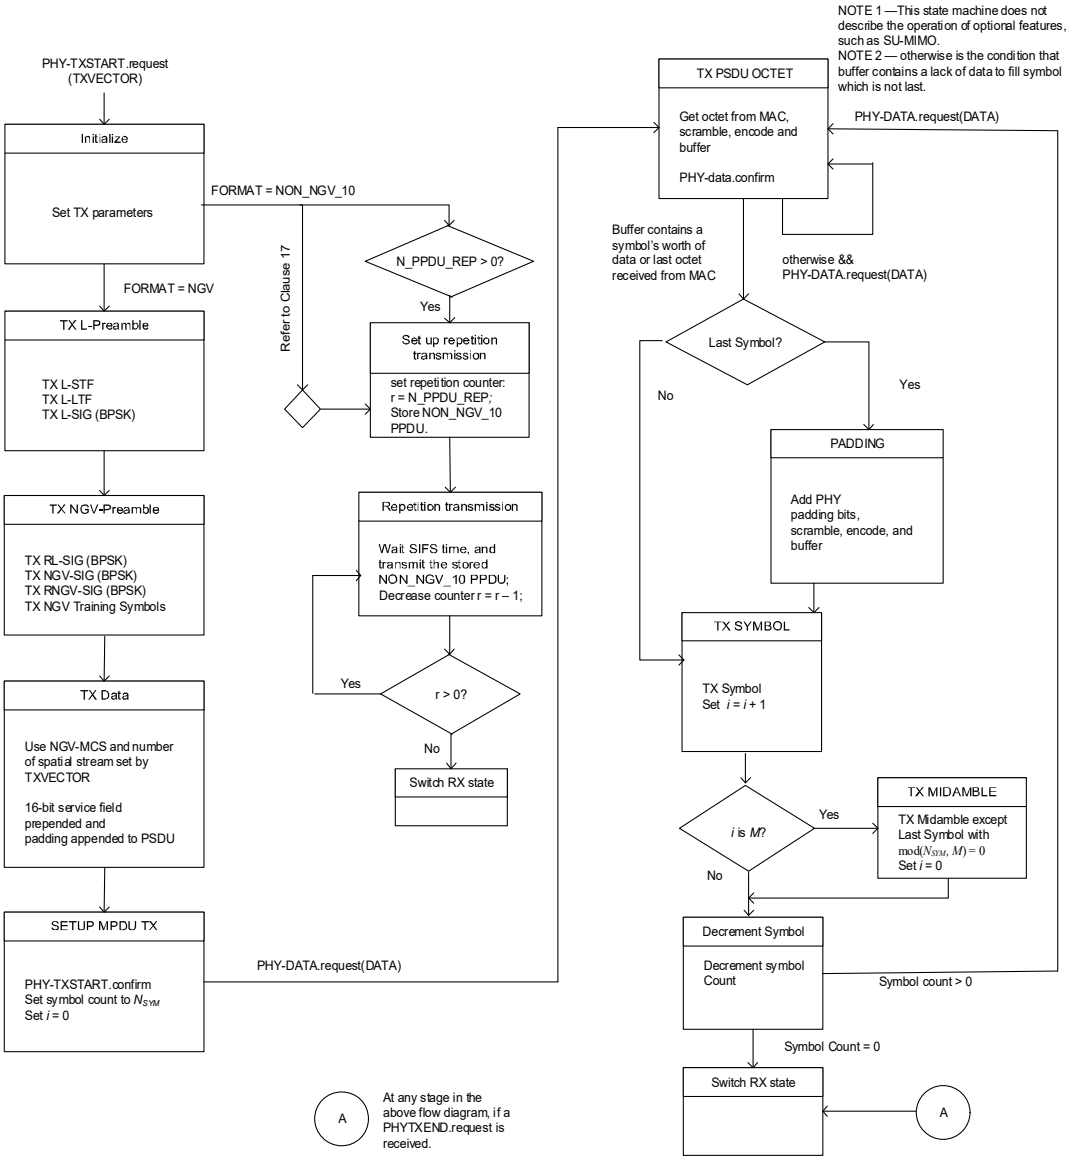

**Figure 32-14—PHY transmit state machine(11bd)**

### 32.3.14 NGV receive procedure

A typical PHY receive procedure is shown in Figure 32-15 (PHY receive procedure for NGV transmission(11bd)) for NGV format. A typical state machine implementation of the receive PHY is given in Figure 32-16 (PHY receive state machine(11bd)). This receive procedure and state machine do not describe the operation of optional features, such as SU-MIMO. If the detected format indicates a NON_NGV_10 PPDU:

— If combined detection of NON_NGV_10 PPDU with repetition is not considered, refer to the receive procedure and state machine in Clause 17 (Orthogonal frequency division multiplexing (OFDM) PHY specification).

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

— Else the receiver checks whether the currently received PPDU is qualified as a repetition of previously received NON_NGV_10 PPDU. The repetition may be determined by checking whether the gap between the time of arrival of the currently detected PPDU and the ending time of the previously received NON_NGV_10 PPDU is SIFS or not. Other repetition detection techniques may be exploited to improve the detection reliability.

  — If the current reception is not a repetition, refer to the receive procedure and state machine in Clause 17 (Orthogonal frequency division multiplexing (OFDM) PHY specification) to decode the PPDU, and overwrite the memory with current PPDU for potential combining with next repetition.

  — Else, the receiver may combine the currently received PPDU with the previously stored NON_NGV_10 PPDU and decode the combined PPDU according to the receive procedure and state machine in Clause 17 (Orthogonal frequency division multiplexing (OFDM) PHY specification). Update the memory with combined PPDU for potential reception of more repetitions.

Further, through station management (via the PLME) the PHY is set to the appropriate frequency, as specified in 32.4 (NGV PLME). Receive parameters, such as RSSI and indicated DATARATE, may be accessed via the PHY SAP.

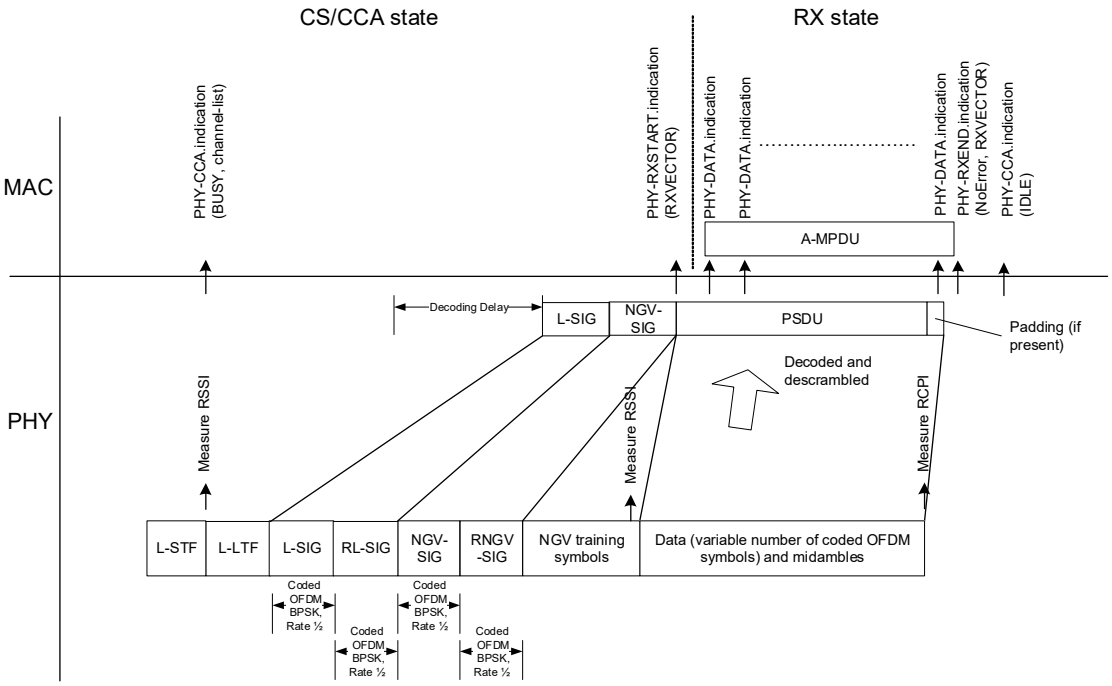

**Figure 32-15—PHY receive procedure for NGV transmission(11bd)**

Upon receiving the transmitted PHY preamble in a greater than or equal to 10 MHz channel, the PHY measures a receive signal strength. This activity is indicated by the PHY to the MAC via a PHY-CCA.indication primitive. A PHY-CCA.indication(BUSY, channel-list) primitive is also issued as an initial indication of reception of a signal as specified in 32.3.12.6 (CCA sensitivity). The channel-list parameter of the PHY-CCA.indication primitive is absent when the operating channel width is 10 MHz. The channel-list parameter is present when the operating channel width is 20 MHz.

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

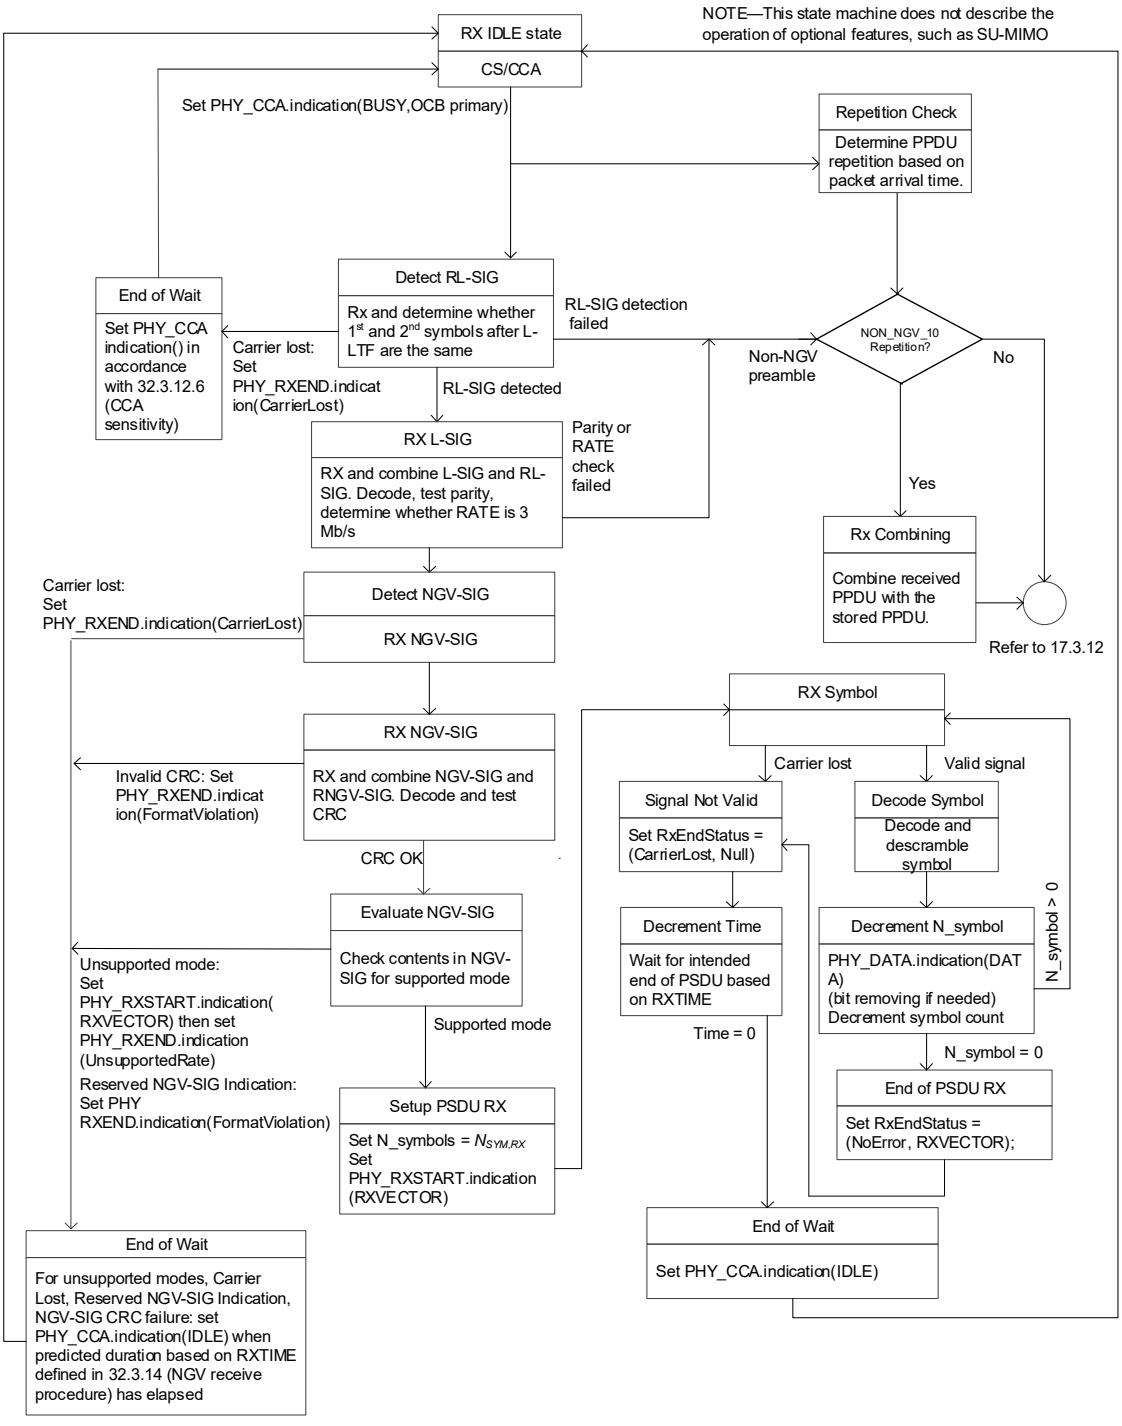

**Figure 32-16—PHY receive state machine(11bd)**

The PHY shall not issue a PHY-RXSTART.indication primitive in response to a PPDU that does not overlap the OCB primary 10 MHz channel.

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

The PHY includes the most recently measured RSSI value in the PHY-RXSTART.indication(RXVECTOR) primitive issued to the MAC.

After the PHY-CCA.indication(BUSY, channel-list) primitive is issued, the PHY entity shall begin receiving the training symbols and searching for the preambles for non-NGV and NGV PPDUs. For detecting the NGV preamble, the PHY entity shall search for L-SIG and RL-SIG in order to set the maximum duration of the data stream. If RL-SIG is detected, the PHY entity should check the parity bit and RATE fields in L-SIG and RL-SIG. If RL-SIG detection fails, the check of the parity bit is invalid, or the RATE field is not equal to 3 Mb/s, a PHY-RXSTART.indication primitive is not issued, and instead the PHY should continue to detect the received signal using NON_NGV_10 Repetition check. If a valid parity bit and the RATE with 3 Mb/s are indicated in L-SIG and RL-SIG, the NGV PHY shall maintain the PHY-CCA.indication(BUSY, channel-list) primitive for the predicted duration of the transmitted PPDU, as defined by RXTIME in Equation (32-41), for all supported modes, unsupported modes, Reserved NGV-SIG Indication, and invalid SIG CRC. Reserved NGV-SIG Indication is defined as an NGV-SIG with the Reserved bits equal to 0 or any other NGV-SIG field bit combinations that do not correspond to modes of PHY operation defined in Clause 32 (Next Generation V2X (NGV) PHY specification(11bd)). If the NGV-SIG indicates an unsupported mode, the PHY shall issue a PHY-RXEND.indication(UnsupportedRate) primitive. If the NGV-SIG indicates an invalid CRC or Reserved NGV-SIG indication, the PHY shall issue the error condition PHY-RXEND.inidcation(FormatViolation).primitive.

After receiving a valid L-SIG, RL-SIG, NGV-SIG, and RNGV-SIG indicating a supported mode, the PHY entity shall begin receiving the NGV training symbols.

The PHY entity shall check the PHY Version in the NGV-SIG field. If the PHY Version does not contain an intended value with 0 for NGV PHY in Table 32-10 (Fields in the NGV-SIG field(11bd)), the PHY entity shall issue a PHY-RXSTART.indication(RXVECTOR) and then issue a PHY-RXEND.indication(Filtered).

Following training fields, the Data field shall be received. The number of symbols in the Data field is determined by Equation (32-39).

$$N_{SYM,\,RX} = \begin{cases} N'_{SYM,\,RX}, & \text{if LDPC Extra Symbol = 0} \\ N'_{SYM,\,RX} - 1, & \text{if LDPC Extra Symbol = 1} \end{cases} \tag{32-39}$$

where

LDPC Extra Symbol is a field in the NGV-SIG field (see Table 32-10 (Fields in the NGV-SIG field(11bd))).

$$N'_{SYM,RX} = \left\lfloor \left( \frac{(\text{L\_LENGTH} + 3) \times 8}{3} - T_{NGV\text{-}PREAMBLE} - N_{MA,\,RX} \times N_{NGV\text{-}LTF} \times T_{NGV\text{-}LTF} \right) / T_{SYM} \right\rfloor$$

where

L_LENGTH is the LENGTH field in L-SIG

$T_{NGV\text{-}PREAMBLE} = T_{RL\text{-}SIG} + T_{NGV\text{-}SIG} + T_{RNGV\text{-}SIG} + T_{NGV\text{-}STF} + N_{NGV\text{-}LTF} \times T_{NGV\text{-}LTF}$

$T_{RL\text{-}SIG}$, $T_{NGV\text{-}SIG}$, $T_{RNGV\text{-}SIG}$, $T_{NGV\text{-}STF}$, and $T_{NGV\text{-}LTF}$, are defined in Table 32-6 (Timing related constants(11bd))

$N_{NGV\text{-}LTF}$ is defined in Table 32-7 (Frequently used parameters(11bd))

$N_{MA,\,RX}$ may be computed by multiple methods that get the same results, an example method is provided in Equation (32-40)

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

$$N_{MA,RX} = \left\lfloor \frac{\frac{(\text{L\_LENGTH} + 3) \times 8}{3} - T_{NGV\text{-}PREAMBLE} - T_{SYM}}{N_{NGV\text{-}LTF} \times T_{NGV\text{-}LTF} + M \times T_{SYM}} \right\rfloor \quad (32\text{-}40)$$

where $M$ is the midamble periodicity as defined in Table 32-10 (Fields in the NGV-SIG field(11bd)).

If signal loss occurs during reception prior to completion of the PSDU reception, the error condition shall be reported to the MAC using a PHY-RXEND.indication(CarrierLost) primitive. After waiting for the intended end of the PSDU as determined by Equation (32-41), the PHY shall generate a PHY-CCA.indication(IDLE) primitive and return to RX IDLE state.

$$\text{RXTIME} = \left\lceil \frac{(\text{L\_LENGTH} + 3)}{3} \right\rceil \times 8 + 40 \quad (32\text{-}41)$$

The received PSDU bits are assembled into octets, decoded, and presented to the MAC using a series of PHY-DATA.indication(DATA) primitive exchanges. Any final bits that cannot be assembled into a complete octet are considered pad bits and discarded. After the reception of the final bit of the last PSDU octet, and possible padding, the receiver shall be returned to the RX IDLE state, as shown in Figure 32-16 (PHY receive state machine(11bd)). A PHY-RXEND.indication(NoError) primitive shall be issued on entry to the RX IDLE state.

### 32.3.15 Regulatory requirements

Wireless LANs (WLANs) implemented in accordance with this standard are subject to equipment certification and operating requirements established by regional and national regulatory administrations. The PHY specification establishes minimum technical requirements for interoperability, based upon established regulations at the time this standard was issued. These regulations are subject to revision or may be superseded. Requirements that are subject to local geographic regulations are annotated within the PHY specification. Regulatory requirements that do not affect interoperability are not addressed in this standard. Implementers are referred to the regulatory sources in Annex D for further information. Operation in countries within defined regulatory domains might be subject to additional or alternative national regulations.

### 32.3.16 NGV ranging NDP

The NGV ranging NDP is a variant of NGV PPDU but without the Data field. The format of an NGV ranging NDP is shown in Figure 32-17 (NGV ranging NDP format(11bd)).

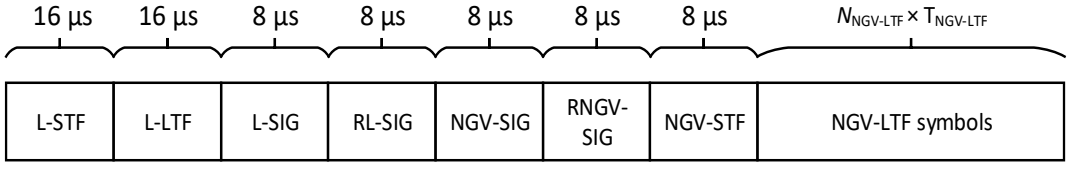

**Figure 32-17—NGV ranging NDP format(11bd)**

The NGV ranging NDP has the following properties:

— The TXVECTOR parameter NUM_SS is used to encode the NSS field of the NGV-SIG and RNGV-SIG.

— The TXVECTOR parameter LTF_REP indicates the number of repetitions of the NGV-LTF symbols.

— The TXVECTOR parameter NGV-MCS shall be set to 0.

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

In an NGV ranging NDP, the NGV-LTF symbol format shall be NGV-LTF-2x.

The number of NGV-LTF symbols in an NGV ranging NDP is the product of the TXVECTOR parameter NUM_SS and (LTF_REP + 1), see Table 32-11 (Number of NGV-LTFs required for different numbers of spatial streams(11bd)).The number of LTF repetitions equals LTF_REP. When LTF repetition is used, LTF_REP is 1. Otherwise, LTF_REP is 0.

The construction of the NGV-LTFs in an NGV ranging NDP is done by performing the steps in 32.3.4.7 (Construction of NGV-LTF) LTF_REP + 1 times. An example of NGV_LTF with two spatial streams and one LTF repetition is shown in Figure 32-18 (Example of NGV-LTF with NSS = 2 and LTF_REP = 1(11bd)).

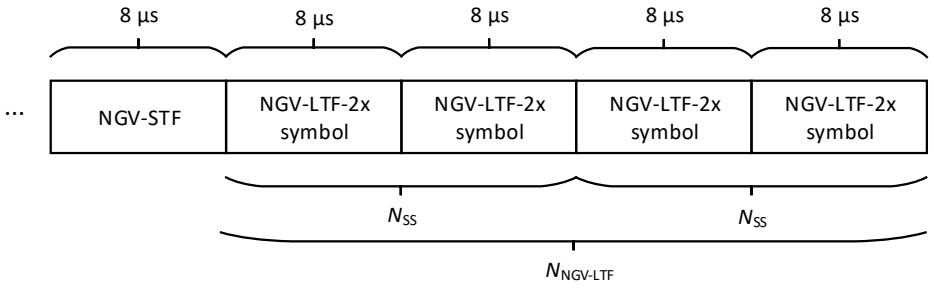

**Figure 32-18—Example of NGV-LTF with $N_{SS}$ = 2 and LTF_REP = 1(11bd)**

## 32.4 NGV PLME

### 32.4.1 PLME-SAP

Table 32-19 (NGV PHY MIB attributes(11bd)) lists the MIB attributes that may be accessed by the PHY entities and the intralayer of higher level LMEs. These attributes are accessed via the PLME-GET, PLME-SET, PLME-RESET, and PLME-CHARACTERISTICS primitives defined in 6.5 (MLME SAP primitives(#1114)).

**Table 32-19—NGV PHY MIB attributes(11bd)**

| Managed object | Default value/range | Operational semantics |
|---|---|---|
| dot11PHYOperationTable | | |
| dot11PHYType | ngv | Static |
| dot11PHYTxPowerTable | | |
| dot11NumberSupportedPowerLevelsImplemented | Implementation dependent | Static |

### 32.4.2 PHY MIB

NGV PHY MIB attributes are defined in C.3 (MIB detail) with specific values defined in Table 32-19 (NGV PHY MIB attributes(11bd)). The "Operational semantics" column in Table 32-19 (NGV PHY MIB attributes(11bd)) contains two types: Static and Dynamic.

— Static MIB attributes are fixed and cannot be modified for a given PHY implementation.

— Dynamic MIB attributes are interpreted according to the MAX-ACCESS field of the MIB attribute. When MAX-ACCESS is read-only, the MIB attribute value may be updated by the PLME and read from the MIB attribute by management entities. When MAX-ACCESS is read-write, the MIB attribute may be read and written by management entities but shall not be updated by the PLME.

### 32.4.3 TXTIME and PSDU_LENGTH calculation

The value of the TXTIME parameter returned by the PLME-TXTIME.confirm primitive shall be calculated for an NGV PPDU using Equation (32-42).

$$\begin{aligned}\text{TXTIME} = {} & 40 + T_{RL\text{-}SIG} + T_{NGV\text{-}SIG} + T_{RNGV\text{-}SIG} + T_{NGV\text{-}STF} + N_{SYM} \times T_{SYM} + \\ & 8 \times \left\lceil \frac{N_{NGV\text{-}LTF} \times T_{NGV\text{-}LTF} + N_{MA} \times N_{NGV\text{-}LTF} \times T_{NGV\text{-}LTF}}{8} \right\rceil \end{aligned} \tag{32-42}$$

where

$T_{RL\text{-}SIG}$, $T_{NGV\text{-}SIG}$, $T_{RNGV\text{-}SIG}$, $T_{NGV\text{-}STF}$, and $T_{SYM}$ are defined in Table 32-6 (Timing related constants(11bd))

$N_{NGV\text{-}LTF}$ is defined in Table 32-7 (Frequently used parameters(11bd))

$N_{MA}$ is defined in 32.3.9.9 (Midambles)

For an NGV PPDU using LDPC encoding, the total number of data symbols in the Data field, $N_{SYM}$, is given in 21.3.10.5.4 (LDPC coding) and computed using Equation (19-41) in step d) of 19.3.11.7.5 (LDPC PPDU encoding process).

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

The value of the PSDU_LENGTH parameter returned in the PLME-TXTIME.confirm primitive for an NGV SU PPDU using LDPC encoding is calculated using Equation (32-43).

$$\text{PSDU\_LENGTH} = \left\lfloor \frac{N_{SYM,init} N_{DBPS} - N_{service}}{8} \right\rfloor \quad (32\text{-}43)$$

where

$N_{SYM,init}$ is given by Equation (21-62) with $m_{STBC} = 1$.

### 32.4.4 NGV PHY

The static NGV PHY characteristics, provided through the PLME-CHARACTERISTICS service primitive, shall be as shown in Table 17-24 (OFDM PHY characteristics) with 10 MHz channel spacing unless otherwise listed in Table 32-20 (NGV PHY characteristics(11bd)). The definitions for these characteristics are given in 6.5.4 (Synchronization).

**Table 32-20—NGV PHY characteristics(11bd)**

| Characteristics | Value |
|---|---|
| aSlotTime | If dot11OperatingClassesRequired is false, 13 μs.<br>If dot11OperatingClassesRequired is true, 13 μs plus any coverage-class-dependent aAirPropagationTime (see Table 9-95 (Venue group codes and descriptions)). |
| aSIFSTime | 32 μs |
| aCCAMidTime | 45 μs |
| aPPDUMaxTime | 10.968 ms |
| aPSDUMaxLength | 244 800 octets (see NOTE 1) |
| aRxPHYStartDelay | 64 μs (see NOTE 2) |

NOTE 1—This is the maximum length in octets for an NGV PPDU with a bandwidth of 20 MHz, NGV-MCS 9, and two spatial streams, and limited by 1360 possible data symbols in aPPDUMaxTime. This is the maximum PSDU length an NGV PHY could support assuming no restrictions in MAC. See 10.3.2 (Procedures common to the DCF and EDCAF) and 9.2.4.7.1 (TRS Control) for additional restrictions on the maximum number of octets the MAC could support.

NOTE 2—This value arises from the time to the end of RNGV-SIG (see Figure 32-5 (NGV PPDU format(11bd))).

## 32.5 Parameters for NGV-MCSs

The rate-dependent parameters for 10 MHz and 20 MHz are given in Table 32-21 (NGV-MCSs for 10 MHz, NSS = 1(11bd)) to Table 32-24 (NGV-MCSs for 20 MHz, NSS = 2(11bd)).

# 33. Light communication (LC) MAC and PHY specification(11bb)

## 33.1 LC MAC specification

### 33.1.1 Introduction

An LC STA supports the MAC functions defined in Clause 10 (MAC sublayer functional description), the MLME functions defined in Clause 11 (MLME), and the security functions defined in Clause 12 (Security).

### 33.1.2 LC MAC

An LC STA with HT support shall follow HT MAC procedures and requirements with an LC PHY. An LC STA with VHT support shall follow VHT MAC procedures and requirements with an LC PHY. An LC STA with HE support shall follow HE MAC procedures and requirements with an LC PHY.

## 33.2 LC PHY specification

### 33.2.1 General

This subclause specifies the PHY entity for a light communications (LC) orthogonal frequency division multiplexing (OFDM) system with an intensity modulation and direct detection (IM/DD) optical interface.

An LC PHY provides one of three levels of support: HT, VHT, or HE.

An LC PHY with HT support conforms to the requirements for an HT PHY as defined in Clause 19 (High Throughput (HT) PHY specification(#2297)) except where the requirements in 33.2 (LC PHY specification) supersede those requirements.

An LC PHY with VHT support conforms to the requirements for a VHT PHY as defined in Clause 21 (Very high throughput (VHT) PHY specification) except where the requirements in 33.2 (LC PHY specification) supersede those requirements.

An LC PHY with HE support conforms to the requirements for an HE PHY as defined in Clause 27 (High-efficiency (HE) PHY specification(11ax)) except for the requirements in 33.2 (LC PHY specification) that supersede those requirements.

### 33.2.2 LC PHY service interface

The LC PHY service is provided to the MAC through the PHY service primitive described in Clause 8 (PHY service specification).

### 33.2.3 LC PHY

#### 33.2.3.1 Introduction

The procedure by which an LC PHY converts a PSDU into a PPDU is defined in 19.3 (HT PHY), 21.3 (VHT PHY), and 27.3 (HE PHY) for an LC PHY with HT, VHT and HE support, respectively, except for the differences described in the remainder of 33.2.3 (LC PHY).

For the requirements in 21.3 (VHT PHY) and 27.3 (HE PHY), the term *frequency segment* applies to the LC IF signal.

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

### 33.2.3.2 Transmitter block diagram

The transmitter block diagrams in 19.3.3 (Transmitter block diagram), 21.3.3 (Transmitter block diagram), and 27.3.5 (Transmitter block diagram) show an Analog and RF block that is described as upconverting the complex baseband waveform associated with each transmit chain to an RF signal.

In the LC PHY, the complex baseband waveform associated with each transmit chain is instead upconverted to an LC IF signal, either directly or by up/down conversion. A DC bias is added to the LC IF signal which is then fed into an optical front end (OFE). The OFE converts the DC biased LC IF signal into an intensity modulated optical signal.

In comparison to an RF channel, which is characterized by multipath propagation, the LC channel is relatively transparent with a dominant LOS component usually 10s of decibels stronger than non-line-of-sight components.

In some implementations, the complex baseband waveform is upconverted directly to an LC IF signal as shown in Figure 33-1 (Direct conversion LC TX(11bb)(M148)). In this example, the LC PHY TX/RX are HT/VHT/HE PHY TX/RX where the RF antennas are replaced by LC optical antennas.

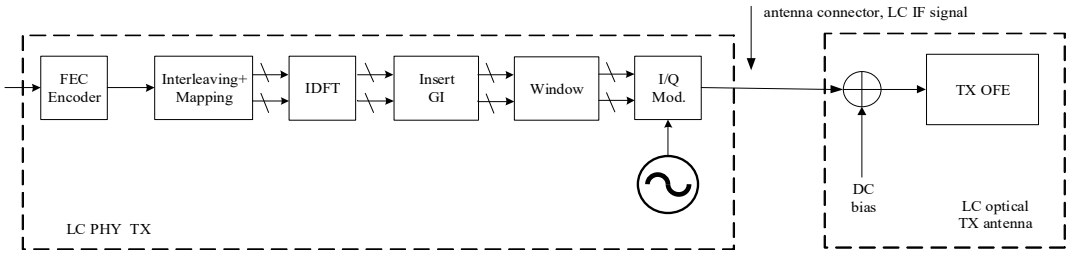

**Figure 33-1—Direct conversion LC TX(11bb)(M148)**

In some implementations, the complex baseband waveform might first be upconverted to an RF signal and then downconverted to the LC IF signal as shown in Figure 33-2 (Up/down conversion LC TX(11bb)(M148)). The downconversion is defined to have unity gain.

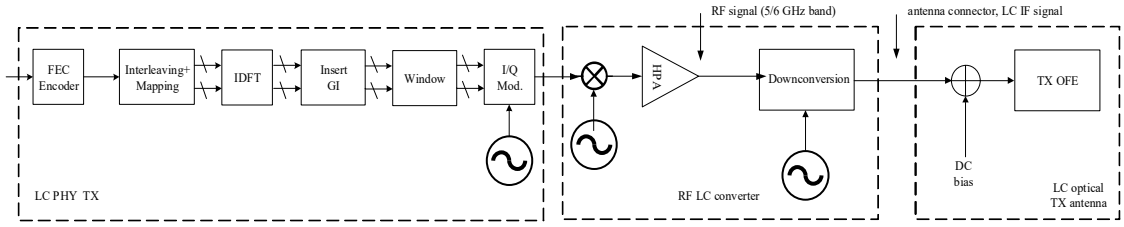

**Figure 33-2—Up/down conversion LC TX(11bb)(M148)**

In this example, the RF signal from the HPA, which is in the frequency range 5 GHz to 6 GHz, is downconverted such that the center frequency aligns with the LC IF channel frequency defined in 33.2.3.4 (Channel numbering). The reference clock of the local oscillator for the downconversion at the LC optical TX antenna is the same as in the LC PHY TX.

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

A DC bias is added to the LC IF signal before the signal is fed to the transmitting OFE because the current through an SSL device can only be positive, as illustrated in Figure 33-3 (Operation of an SSL device with DC bias(11bb)(M148)).

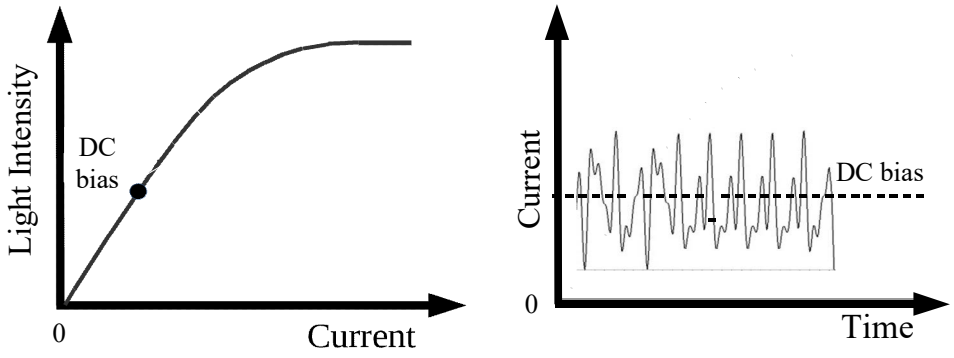

**Figure 33-3—Operation of an SSL device with DC bias(11bb)(M148)**

An LC PHY supports the use of multiple transmit chains and multiple receive chains. An example of the LC PHY TX connected to multiple LC optical TX antennas is shown in Figure 33-4 (Connecting the LC PHY TX to multiple optical TX antennas(11bb)).

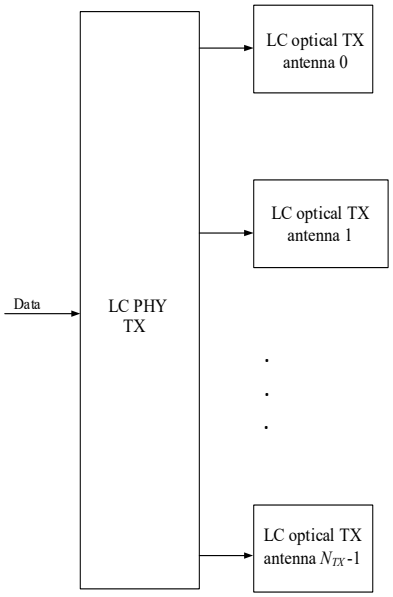

**Figure 33-4—Connecting the LC PHY TX to multiple optical TX antennas(11bb)**

### 33.2.3.3 Mathematical description of signals

The LC IF signal is described by Equation (19-1), Equation (21-11), and Equation (27-1) for an LC PHY with HT, VHT or HE support, respectively, where $f_c$ is the LC IF.

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

#### 33.2.3.4 Channel numbering

In systems using light communications, the frequency segment refers to the LC IF signal.

LC IF channel center frequencies are defined at integer multiples of 5 MHz above the LC IF channel starting frequency. The relationship between LC IF channel center frequency and channel number $n_{ch}$ is given in Equation (33-1).

$$\text{LC IF channel center frequency} = \text{LC IF channel starting frequency} + 5 \times n_{ch} \text{ (MHz)}, \quad (33\text{-}1)$$

where

$n_{ch} = 1,\ldots, 64$ is the channel number or channel center frequency index

LC IF channel starting is defined in Annex E.

Equation (33-1) and the LC IF channel starting frequencies defined in Annex E divide the LC IF spectrum into two segments: frequencies in the range 16 MHz to 176 MHz that map from the 5 GHz band and frequencies in the range 176 MHz to 336 MHz that map from the 6 GHz band as shown in Table 33-1 (RF to LC IF mapping for channels in the 5 GHz and 6 GHz bands(11bb))(M148).

A channel number or channel center frequency index from the 5 GHz band shall not be greater than 64. A channel number or center frequency index from the 6 GHz band shall not be greater than 29.

### 33.2.3.5 Multiple transmit chains and multiple receive chains

#### 33.2.3.5.1 General

The LC PHY may use multiple transmit chains and multiple receive chains to support spatial multiplexing and/or wavelength division multiplexing.

In an LC PHY that implements RF up/downconversion and has multiple transmit chains, the RF downconverters shall be synchronized to a common reference clock. In an LC PHY that implements RF up/downconversion and has multiple receive chains, the RF upconverters shall be synchronized to a common reference clock.

For an LC PHY with multiple optical TX antennas and HT support, the LC PHY TX shall use the procedures defined in 19.3 (HT PHY), where $N_{TX}$ transmit chains in the HT PHY shall be connected to $N_{TX}$ LC optical TX antennas.

For an LC PHY with multiple optical TX antennas and VHT support, the LC PHY TX shall use the procedures defined in 21.3 (VHT PHY), where $N_{TX}$ transmit chains in the VHT PHY shall be connected to $N_{TX}$ LC optical TX antennas.

For an LC PHY with multiple optical TX antennas and HE support, the LC PHY TX shall use the procedures defined in 27.3 (HE PHY), where $N_{TX}$ transmit chains in the HE PHY shall be connected to $N_{TX}$ LC optical TX antennas.

#### 33.2.3.5.2 Spatial multiplexing

Spatial multiplexing is supported when LC optical RX antennas and LC optical TX antennas are positioned such that light transmitted by an LC optical TX antenna incident on an LC optical RX antenna is at least partially isolated from the light transmitted by another LC optical TX antenna that is incident on another LC optical RX antenna. The isolation might be achieved by directing the light at the optical TX antenna or capturing light from a particular direction at the optical RX antenna. The isolation might also be achieved by spatially separating the LC optical TX antennas and/or LC optical RX antennas. This principle is illustrated in Figure 33-5 (Spatial multiplexing with an LC PHY(11bb)(M148)).

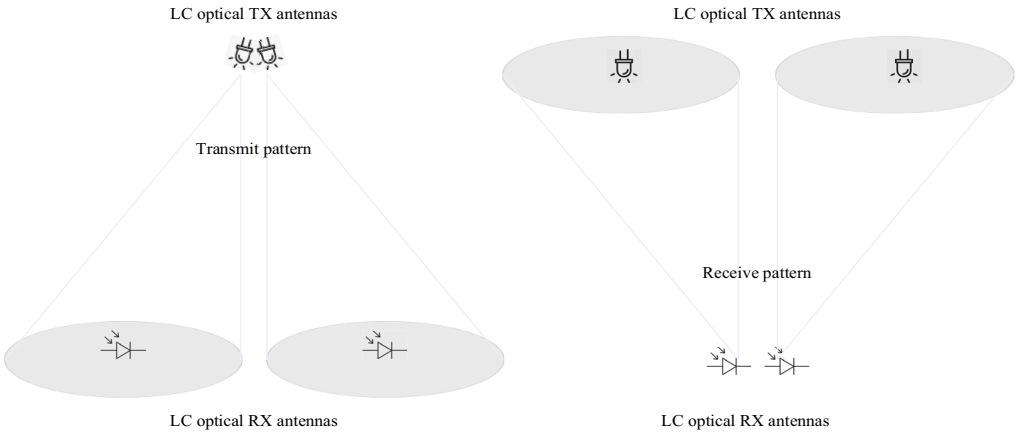

**Figure 33-5—Spatial multiplexing with an LC PHY(11bb)(M148)**

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

#### 33.2.3.5.3 Wavelength-division multiplexing

Wavelength division multiplexing is supported when the wavelength of the light transmitted by one LC optical TX antenna is different from the wavelength of the light transmitted by another LC optical TX antenna and, correspondingly, one LC optical RX antenna is sensitive to the light of the first wavelength but not the second wavelength and another LC optical RX antenna is sensitive to the light of the second wavelength but not the first wavelength. This principle is illustrated in Figure 33-6 (Wavelength division multiplexing with an LC PHY(11bb)(M148)).

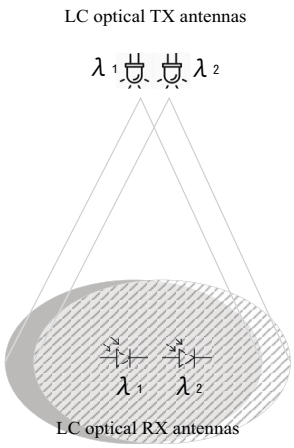

**Figure 33-6—Wavelength division multiplexing with an LC PHY(11bb)(M148)**

For example, with two transmit chains, one operating at 950 nm and the other at 850 nm, a shortpass dicroic beam splitter with a cut-off wavelength of 900 nm can be used in front of both receive chains. The wavelength of the first transmit chain is longer than the cut-off wavelength. It is reflected and detected by the first receive chain. The wavelength of the second transmit chain is shorter than the cut-off wavelength. It passes through and is detected by the second receive chain.

An LC STA with a single transmit chain is interoperable with an LC STA with multiple transmit and multiple receive chains operating in wavelength division multiplexing mode. The sum of transmitted and reflected signals from a dicroic beamsplitter is approximately the same, independent of the wavelength.

For example, a first LC STA with a single optical antenna supports a single stream. This stream can be detected by both receive chains of a second LC STA with two optical antennas by combining their signals. In the reverse link direction, both transmit chains of the second LC STA are used to transmit a single stream which can be detected by the single receive chain of the first LC STA.

Note that when using LEDs with different wavelengths, their optical spectra might be wider and cause residual crosstalk at a receive chain. The crosstalk might be minimized by using multiple-transmit multiple-receive antenna processing.

In the above description, if the LC optical TX antennas are in one LC STA and the LC optical RX antennas are in another LC STA the arrangement supports SU-MIMO. If the LC optical antennas (TX or RX) at one

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

end are in the same LC STA but the LC optical antennas (RX or TX) at the other end are in different LC STAs then the arrangement supports MU-MIMO.

An LC optical RX antenna shall be sensitive to light in one of the following wavelength ranges:

— 800 nm to 900 nm
— 900 nm to 1000 nm
— 800 nm to 1000 nm

An LC PHY shall have at least one receive chain with an LC optical RX antenna sensitive to light in the 800 nm to 1000 nm range or at least two receive chains with one receive chain with an LC optical RX antenna sensitive to light in the 800 nm to 900 nm range and the other receive chain with an LC optical RX antenna sensitive to light in the 900 nm to 1000 nm range.

The maximum number of spatial streams supported by an LC PHY using wavelength division multiplexing is 2.

#### 33.2.3.6 Receive specification

The minimum receive sensitivity of an LC PHY shall be –15 $dBm_{opt}$ measured as the average incident optical power in the range 800 to 1000 nm at the LC optical RX antennas.

#### 33.2.3.7 CCA for LC

##### 33.2.3.7.1 CCA requirements

The CCA requirements for the LC PHY apply to the LC IF signal as measured at the antenna connector.

The CCA requirements for the HT PHY in 19.3.19.6 (CCA sensitivity) to detect a channel busy condition are applicable to the LC PHY with HT support.

The CCA requirements for the VHT PHY in 21.3.18.5 (CCA sensitivity) to detect a channel busy condition are applicable to the LC PHY with VHT support.

The CCA requirements for the HE PHY in 27.2.7 (Support for non-HT, HT, and VHT formats) and 27.3.22 (Receiver specification) to detect a channel busy condition are applicable to LC PHY with HE support.

##### 33.2.3.7.2 LC repetition

An LC STA transmission is directional, hence a non-AP LC STA might not be able to receive signals from peer non-AP LC STAs. LC repetition is an optional feature in an LC AP that effectively extends the area covered by a transmission from a non-AP LC STA to include the area covered by the LC AP. LC repetition together with other mechanisms, such as the RTS/CTS mechanism defined in 10.3 (DCF), might reduce collisions in an LC BSS.

An LC AP may transmit at the TX OFE a repeat of the signal it receives at the RX OFE. The delay between the received signal and the repeated signal shall be less than 1 μs.

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

Figure 33-7 (An example of channel access with LC repetition(11bb)) illustrates an example of channel access with the LC repetition mechanism.

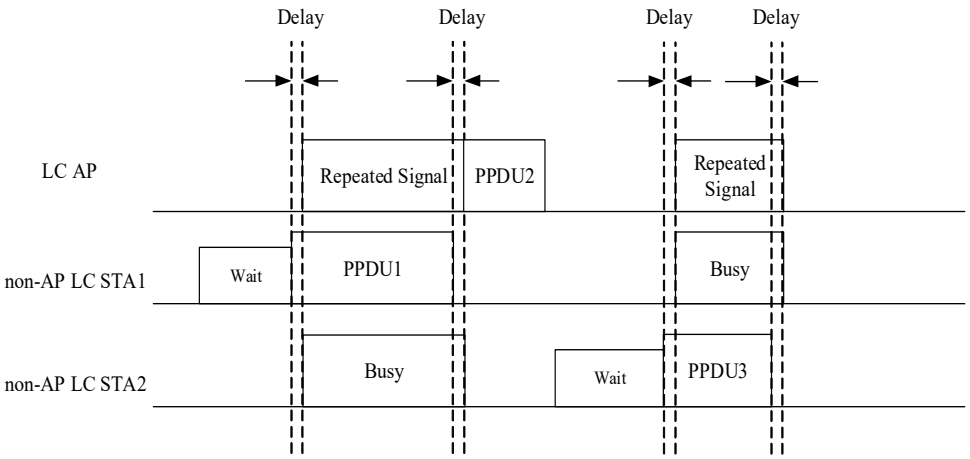

**Figure 33-7—An example of channel access with LC repetition(11bb)**

The LC AP receives PPDU1 from non-AP LC STA1 and repeats the signal to non-AP LC STAs in its coverage area. The non-AP LC STA2 then detects a channel busy condition on receiving the repeated signal. After retransmitting PPDU1, the LC AP sends PPDU2 to non-AP LC STA1 in response to PPDU1. Non-AP LC STA2 sends PPDU3 to the LC AP after it detects an idle channel condition. The LC AP repeats the signal and, as a result, non-AP LC STA1 finds the channel busy.

#### 33.2.3.8 Regulatory requirements

Wireless LANs (WLANs) implemented in accordance with this standard are subject to equipment certification and operating requirements established by regional and national regulatory administrations. The PHY specification establishes minimum technical requirements for interoperability, based upon established regulations at the time this standard was issued. These regulations are subject to revision or may be superseded. Requirements that are subject to local geographic regulations are annotated within the PHY specification. Regulatory requirements that do not affect interoperability are not addressed in this standard.

Implementers are referred to the regulatory sources in Annex D and to IEC 60825-1 (or its relevant latest version) for further information.

# 34. Enhanced broadcast services MAC specification(#7051)(11bc)

## 34.1 Overview

### 34.1.1 Introduction

This clause describes EBCS procedures that are used for EBCS STAs. EBCS procedures are supported both where there is an association between the transmitter(s) and the receiver(s) in an infrastructure BSS and in cases where there is no association between transmitter(s) and receiver(s).

The EBCS procedures include the EBCS DL procedure and the EBCS UL procedure. With the EBCS DL procedure EBCS Data frames are broadcast by an EBCS AP to one or more EBCS receivers (see 34.3 (EBCS DL procedures)). With the EBCS UL procedure EBCS Data frames are broadcast by an EBCS non-AP STA to one or more EBCS relaying STAs, for subsequent delivery to a specified destination (see 34.4 (EBCS UL procedure)). The EBCS procedures are not supported for MBSS or GLK.

NOTE—EBCS DL and EBCS UL do not operate with DMG, CDMG, and EDMG.

## 34.2 EBCS addressing

EBCS Data frames shall use an EBCS content MAC address in the Address 1 field in the MAC header. EBCS UL frames shall use an EBCS content MAC address in the Address 3 field in the MAC header. EBCS Info frames shall use an EBCS info MAC address in the Address 3 field in the MAC header. Both the EBCS content MAC address and EBCS info MAC address are multicast addresses with the first three octets set to 01-0F-AC, and the remaining octets generated depending on the type of stream and the content ID.

The EBCS info MAC address used for EBCS Info frames shall be set to 01-0F-AC-*xx*-*yy*-00, where octets *xx*-*yy* are set to the EBCS AP group ID or 00-00 when the EBCS AP does not belong to any EBCS AP group.

The EBCS content MAC address for EBCS UL or EBCS Data frames shall be set to 01-0F-AC-*xx*-*yy*-*zz*.

For EBCS Data frames, the assigned content ID and the configured EBCS AP group ID are encoded into the Address fields in the MAC header by the EBCS traffic stream mapper as follows:(#7110)

— octet *zz* is set by the EBCS traffic stream mapper to the content ID
— octets *xx*-*yy* are set by the EBCS traffic stream mapper to the EBCS AP group ID or 00-00 when the EBCS AP does not belong to an EBCS AP group.

NOTE 1—The EBCS DL traffic stream might originate from another STA in the ESS or from a device outside the ESS, through a portal.(#7110)

For EBCS UL frames,

— octets *xx*, *yy* and *zz* are populated by the EBCS non-AP STA to a set of provisioned values that corresponds to the UL traffic stream.

NOTE 2—Although the octets *xx* and *yy* for EBCS DL traffic are expected to be set to a combination of values that are unique to the coverage area where the content is being broadcast, the uniqueness of the octets *xx* and *yy* is not guaranteed. It is recommended that the octets *xx*, *yy*, and *zz* for EBCS UL traffic be provisioned in EBCS non-AP STAs to values that are unique for each UL traffic stream. EBCS UL and EBCS Data frames can be differentiated because the EBCS UL frame is a management frame while the EBCS Data frame is a Data frame.

This is an unapproved IEEE Standards Draft, subject to change.

## 34.3 EBCS DL procedures

### 34.3.1 General

The EBCS DL procedure allows an EBCS AP to distribute multicast content to both associated and unassociated EBCS receivers with data origin authenticity.

The frame sequence of the EBCS DL procedure is shown in Figure 34-1 (EBCS DL frame sequence(11bc)).

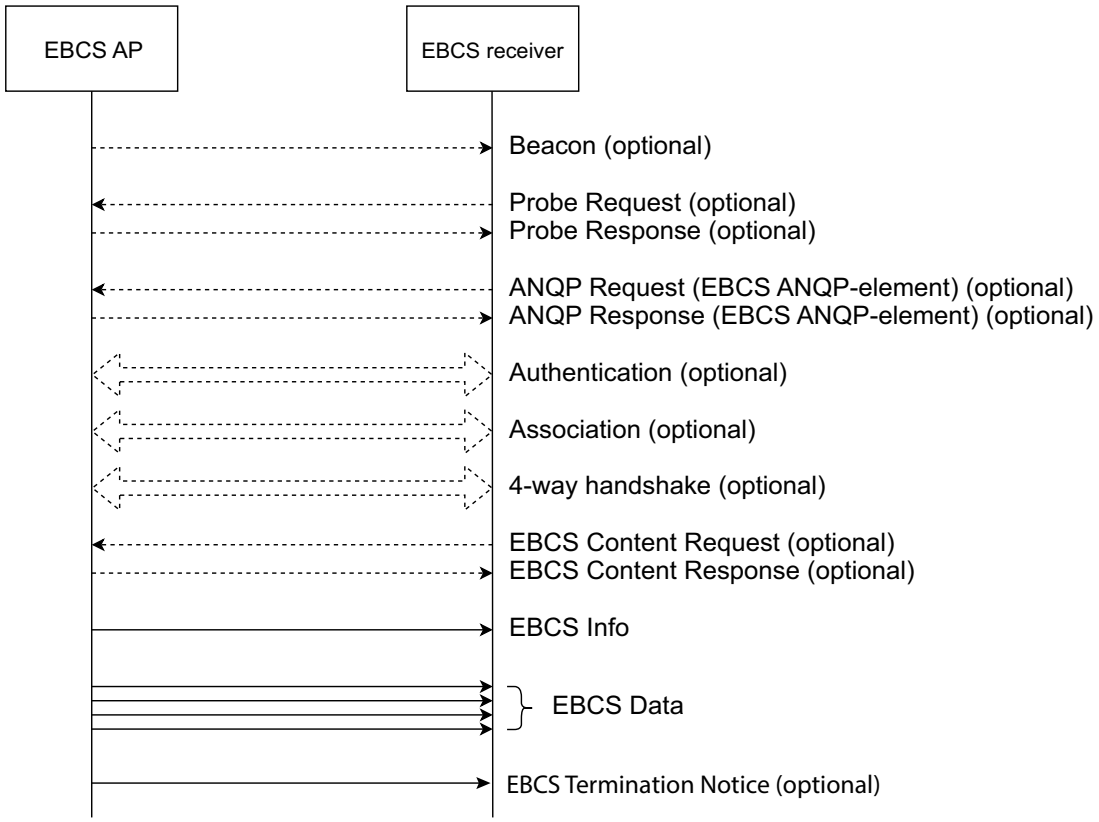

**Figure 34-1—EBCS DL frame sequence(11bc)**

NOTE—An EBCS AP might transmit EBCS Info frames and EBCS Data frames that contain the same Frame Body field multiple times consecutively to increase redundancy.

Beacon, S1G Beacon, Probe Request/Response/PV1 Probe Response, and ANQP Request/Response frames are optional. Authentication, Association Request/Response, and EBCS Content Request Response frames and the 4-way handshake depend on the requirements and status of the desired EBCS traffic streams.

The usage of these frames is described in the following subclauses:

- Beacon, S1G Beacon, Probe Request/Response/PV1 Probe Response, FILS Discovery: 34.3.2 (EBCS DL procedure at an EBCS AP) and 34.3.3 (EBCS DL procedure at an EBCS receiver)
- ANQP Request/Response: 11.22.3.3.17 (Enhanced broadcast services procedures(11bc)) and 34.3.8 (EBCS negotiation for unassociated STAs)
- EBCS Content Request/Response: 34.3.7 (EBCS negotiation for associated STAs)
- EBCS Termination Notice: 34.3.9 (EBCS termination notice and extension negotiation)

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

### 34.3.2 EBCS DL procedure at an EBCS AP

EBCS DL procedure is enabled in an EBCS AP if the length of the dot11EBCSTrafficStreamTable is greater than 0. The EBCS traffic streams to be transmitted are specified in dot11EBCSTrafficStreamTable. The EBCS traffic streams are handled differently from other traffic. An EBCS content ID and EBCS content MAC address shall be assigned by the EBCS traffic stream mapper to identify each different traffic stream of content. Each content ID shall be unique in the EBCS AP group if the EBCS AP belongs to an EBCS AP group, otherwise each content ID shall be unique in the EBCS certificate group. If an EBCS AP does not belong to either an EBCS certificate group or an EBCS AP group, each content ID shall be unique in the EBCS AP. The content ID shall be nonzero.

NOTE 1—The content ID is contained in the EBCS content MAC address. To avoid conflict between the EBCS content MAC address and the EBCS info MAC address, the content ID is not set to 0.

An EBCS AP that has enabled EBCS DL may use an AP certificate. An EBCS AP using an AP certificate shall belong to an EBCS certificate group, otherwise it shall not belong to an EBCS certificate group. An EBCS AP that has enabled EBCS DL may belong to an EBCS AP group. An EBCS AP group is a subgroup in an EBCS certificate group. Each EBCS AP group is identified by a 2 octet EBCS AP group ID in the range of 00-01 to 7F-FF indicated in dot11EBCSAPGroupID.

NOTE 2—The EBCS AP group ID that is encoded in the EBCS content MAC address (Address 1 field in MAC header) helps EBCS receivers to filter undesired frames. If the EBCS AP group ID is unique, then the EBCS receiver can omit the corresponding Address 1 filter and hence avoid performing unnecessary authentication steps.

When an EBCS AP is an HE AP or S1G AP:

— The BSS color of EBCS Info frames shall be 0.

— The BSS color of EBCS Data frames shall be 0 if association is not required to consume EBCS traffic streams, otherwise the BSS color of EBCS Data frames shall be the same as that indicated in the HE Operation element in the most recent Beacon frame.

An EBCS AP, which is an S1G AP, may advertise its EBCS capabilities in the EBCS Support field in the Extended Capabilities element in S1G Beacon frames and PV1 Probe Response frames. An EBCS AP, which is an S1G AP, shall advertise its EBCS capabilities in the EBCS Support field in the Extended Capabilities element in Probe Response frames.

An EBCS AP, which is not an S1G AP, shall advertise its EBCS capabilities in the EBCS Support field in the Extended Capabilities element in Beacon frames and Probe Response frames. An EBCS AP that has EBCS DL enabled shall transmit EBCS Info frames periodically. The interval between two consecutive EBCS Info frames is specified by dot11EBCSInfoInterval. An EBCS AP shall advertise the timing of the next EBCS Info frame transmission in the EBCS Info Frame TX Countdown field in the EBCS Parameters element and shall not signal an upcoming EBCS Info frame via the TIM element (#8039)or the EBCS TIM element. An EBCS AP shall advertise the certificate group in Beacon frames using the Compressed Certificate Group ID field in the EBCS parameters element if the EBCS AP belongs to an EBCS certificate group. An EBCS AP shall advertise the EBCS AP group by the EBCS Group ID field in the EBCS Parameters element in Beacon frames if the EBCS AP belongs to an EBCS AP group. The EBCS Info frame shall be transmitted among the set of group addressed frames transmitted immediately after the Beacon frame identified by the EBCS Info Frame TX Countdown field set equal to 1 in the EBCS Parameters element. Details of EBCS Info frame generation are described in 34.3.4 (EBCS Info frame generation and usage).

(#8039)NOTE 3—An EBCS AP might provide the timing of the next EBCS Info frame transmission for a reported AP by including a TBTT Information field (corresponding to the reported AP) carrying the EBCS Info Frame TX Countdown field within a Reduced Neighbor Report element.

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

In the MAC, MSDUs with a non-null EBCS content ID in the MA-UNITDATA.request shall bypass IEEE 802.1X filtering. If the destination address in the MA-UNITDATA.request is an EBCS content MAC address, the MAC shall process the request as an EBCS content request, otherwise the MAC shall process the request as a non-EBCS request. For an MA-UNITDATA.request for EBCS content, the MAC shall use one of the following three frame authentication mechanisms according to the content ID that is encoded in the EBCS content MAC address (34.2 (EBCS addressing)).

— PKFA (12.15.2 (EBCS public key frame authentication (PKFA)))
— HCFA (12.15.3 (EBCS hash chain frame authentication (HCFA)))
— HLSA (12.15.4 (No frame authentication with mandatory higher layer source authentication (HLSA)))

EBCS traffic streams are carried by EBCS Data frames. The EBCS AP shall set the RA of the EBCS Data frame to the EBCS content MAC address, the TA to its BSSID, and the SA to the group address assigned to the EBCS traffic stream by the EBCS DL content server. If the EBCS Data frame contains an IPv4 multicast packet or an IPv6 multicast packet, the SA shall be mapped according to IETF RFC 1112 or IETF RFC 2464, respectively.

If dot11EBCSTrafficStreamPHYType is not 255, an EBCS AP shall generate a PHY-TXSTART.request primitive with the transmission rate information specified by the dot11EBCSTrafficStreamPHYType and dot11EBCSTrafficStreamTxRate for each MPDU according to the EBCS content ID. If dot11EBCSTrafficStreamPHYType is 255, the AP shall select a transmission rate following the rules specified in 10.6.5.4 (Rate selection for other group addressed Data and Management frames).

NOTE 4—Rate selection for each EBCS traffic stream provides flexibility of operation. For example, one stream that provides a video streaming service can use HE for high throughput. Another stream that provides a directory of the venue can use HT to cover a large area.

When dot11EBCSTrafficStreamBufferableActivated for an EBCS traffic stream is true, an EBCS AP shall buffer the EBCS Data frames for that EBCS traffic stream and shall signal buffered EBCS Data frames via the EBCS TIM field or the EBCS TIM element (see 9.4.2.314 (EBCS TIM element(11bc))) instead of the TIM element. The EBCS AP shall transmit the buffered EBCS Data frames after transmitting the EBCS Info frame or the Beacon frame that contains the EBCS TIM field or the EBCS TIM element indicating the EBCS traffic stream. The EBCS AP shall set the More Data subfield in the Frame Control field in the EBCS Data frame to 1 if more EBCS Data frames of the same EBCS traffic stream are buffered at the AP, otherwise the More Data subfield shall be set to 0.

When dot11EBCSTrafficStreamBufferableActivated for an EBCS traffic stream is false, an EBCS AP shall not buffer the EBCS Data frames and shall transmit the EBCS Data frames that contain the EBCS traffic stream as soon as possible and shall not signal via the EBCS TIM element or the TIM element.

An EBCS AP shall transmit the EBCS TIM element in Beacon frames or S1G Beacon frames if dot11EBCSTIMInBeaconActivated is true, in addition to EBCS Info frames.

NOTE 5—The TIM element has only 1 bit for signaling buffered group addressed frames and so cannot differentiate between different streams of traffic. If an EBCS AP were to use the TIM element, an associated non-AP STA that does not subscribe to any EBCS traffic stream would stay awake for the EBCS traffic streams. This would cause unnecessary power consumption at the STA. Similarly, using a TIM element would cause an unassociated non-AP STA that subscribes to an EBCS traffic stream to stay awake for any non-EBCS group addressed traffic.

### 34.3.3 EBCS DL procedure at an EBCS receiver

An EBCS receiver discovers an EBCS capable AP by receiving any of the following:

— a Beacon frame, an S1G Beacon frame, a Probe Response frame or a PV1 Probe Response frame with the EBCS Support field in the Extended Capability element equal to 1

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

- an EBCS Info frame
- an ANQP Response frame that includes the EBCS ANQP-element
- a FILS Discovery frame that includes an EBCS Parameters element

In case of PKFA or HCFA, an EBCS receiver shall use the content of received EBCS Info frames to validate the source of an EBCS traffic stream as describe in 12.15.2 (EBCS public key frame authentication (PKFA)) or 12.15.3 (EBCS hash chain frame authentication (HCFA)). An EBCS receiver is able to know when the next EBCS Info frame is transmitted by inspecting the EBCS Info Frame TX Countdown field in the EBCS Parameters element in Beacon frames, S1G Beacon frames, PV1 Probe Response frames, and Probe Response frames, FILS Discovery frames or the Enhanced Broadcast Services ANQP-element in ANQP Response frames. An EBCS receiver may select the EBCS traffic streams to receive and consume. Details of the usage of the EBCS Info frame is described in 34.3.4 (EBCS Info frame generation and usage). An EBCS receiver may need to request or register for one or more EBCS traffic streams by transmitting to an EBCS AP an EBCS Content Request frame or a frame containing an EBCS Content Request ANQP-element (see 34.3.7 (EBCS negotiation for associated STAs) and 34.3.8 (EBCS negotiation for unassociated STAs)).

NOTE 1—An EBCS receiver might be able to receive EBCS content without transmitting any frames.

The SME of an EBCS receiver shall maintain the dot11EBCSTrafficStreamEntry entries in the dot11EBCSTrafficStreamTable table that corresponds to the Content Information subfields in the Content Information List field in the EBCS Info frame. The SME selects one or more EBCS traffic streams to receive, then sets its dot11EBCSTrafficStreamActivated accordingly and configures the EBCS filter in its MAC to pass through the EBCS Data frames that have the EBCS content MAC address corresponding to the selected EBCS traffic streams as the DA and to filter other EBCS data frames. If the HLP payload destination address is an IPv4 address or an IPv6 address, the SA is assumed to be mapped according to IETF RFC 1112 and IETF RFC 2464, respectively.

An EBCS receiver shall authenticate all EBCS Info frames and EBCS Data frames by the authentication mechanism specified in the EBCS Info Authentication Algorithm subfield in the EBCS Info Control field for the EBCS Info frame and the Content Authentication Algorithm subfield in the Content Information field for the EBCS Data frames, in the EBCS Info frame. Details of frame authentication procedures are described in 12.15 (Frame authentication for EBCS(11bc)).

An MSDU contained in an authenticated EBCS Data frame shall be forwarded to a higher layer via the EBCS filter. The EBCS filter shall be configured by the SME to filter out the undesired MSDUs if they do not have the corresponding EBCS content MAC address and the corresponding EBCS content ID. An EBCS traffic stream shall pass through the IEEE 802.1X Controlled Port even if the IEEE 802.1X Controlled Port is blocked (e.g., because the STA is not associated), and generate MA-UNITDATA.indication with the SA of the EBCS Data frame as the destination address and the TA of the EBCS Data frame as the source address.

An EBCS receiver may receive and consume an EBCS traffic stream that is transmitted by multiple EBCS APs. An EBCS receiver shall identify an EBCS traffic stream by its content ID and the BSSID of the EBCS AP, and optionally by its AP certificate and its AP group ID.

NOTE 2—The EBCS filter does not provide duplicate detection for EBCS traffic streams transmitted from multiple APs. Duplicate detection can be provided in a higher layer.

### 34.3.4 EBCS Info frame generation and usage

An EBCS AP that is not in a multiple BSSID set shall transmit an EBCS Info frame every dot11EBCSInfoInterval beacon periods with the Address 1 field set to the broadcast address, the Address 2 field set to the transmitting AP's MAC address, and the Address 3 field set to the EBCS info MAC address. In a multiple BSSID set, only the AP corresponding to the transmitted BSSID may have EBCS DL enabled

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

and, if enabled, shall transmit an EBCS Info frame, with the Address 1 field set to the broadcast address, the Address 2 field set to the transmitted BSSID, and the Address 3 field set to the EBCS info MAC address every dot11EBCSInfoInterval beacon periods. The other APs in the multiple BSSID set shall not transmit EBCS Info frames. In a cohosted BSSID set, at most one AP may have EBCS DL enabled and, if enabled, shall transmit an EBCS Info frame every dot11EBCSInfoInterval beacon periods. The other APs in the cohosted BSSID set shall not have EBCS DL enabled and shall not transmit an EBCS Info frame.

The EBCS Info Sequence Number subfield in the first EBCS Info frame shall be set to a random number and shall be incremented by 1 for each subsequent EBCS Info frame transmission. If the field value overflows, it shall be set to 0.

If any of the EBCS traffic streams made available by a single AP do not use HLSA as the content authentication algorithm, then the EBCS Info Authentication Algorithm field in the EBCS Info frame that it transmits shall not indicate None (see Table 9-507 (EBCS Info Authentication Algorithm field(11bc))); otherwise it may indicate None.

If the EBCS Info Authentication Algorithm field value is not None nor Prenegotiated, the EBCS Info frame shall contain the certificate of the AP that is signed by the certificate of the CA or an intermediate certificate. If the certificate is signed by an intermediate certificate, the certificate of the AP shall contain the full certificate chain to the certificate of the CA.

If dot11EBCSInfoPHYType is not 255, an EBCS AP shall generate a PHY-TXSTART.request primitive with the transmission rate information specified by the dot11EBCSInfoPHYType and dot11EBCSInfoTxRate for EBCS Info frames. If dot11EBCSInfoPHYType is 255, the AP shall select a transmission rate following the rules specified in 10.6.5.4 (Rate selection for other group addressed Data and Management frames).

On reception of an EBCS Info frame, an EBCS receiver shall check the integrity of the EBCS Info frame as described in 12.15.2 (EBCS public key frame authentication (PKFA)) if the EBCS Info Authentication Algorithm subfield in the EBCS Info frame does not indicate None.

If the integrity of the EBCS Info frame is verified, the EBCS receiver shall process each Content Information field according to the value of the Content Authentication Algorithm subfield:

The following processes are common in all authentication algorithms:

— The EBCS receiver shall cache the values of the Content Information List field.
— The EBCS receiver shall notify the SME of the cached information (see 6.3.129.3).

In the PKFA case,

— If the Vendor Specific Data subfield is present in the Content Information field, the EBCS receiver shall forward the MSDU in the Vendor Specific Data subfield to a higher layer and shall cache the certificate in the EBCS Info frame to authenticate PFKA MPDUs.

An EBCS STA may filter traffic based on the value carried in the Address 3 field of a received frame to determine that the frame is an EBCS Info frame.

In the HCFA case,

— The EBCS receiver shall cache the HCFA base key in the Content Information field.
— If instant authenticators are present in the content information, the EBCS receiver shall cache them.
— If HCFA base keys from a previous period are present in the Content Information field, the EBCS receiver shall authenticate the EBCS data frames of the previous HCFA period.

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

### 34.3.5 EBCS Info frame fragmentation

An EBCS Info frame may be fragmented into multiple MMPDUs. The length of each fragment shall be an even number of octets, except for the last fragment, which may have an odd length. The length of a fragment shall not be larger than dot11FragmentationThreshold.

An EBCS info frame is fragmented as follows:

1) Construct an unfragmented EBCS Info frame.
2) Select a fragment length such that the Fragment Hash Values field, the Certificate field, and the Signature field will fit in the first fragment.
3) Determine the number of fragments, *n,* and set the Number of Fragments subfield to *n*–1.
4) Insert space for *n*–1 Fragment Hash Values fields into the EBCS Info frame.
5) Divide the EBCS Info frame after the Fragment Hash Values field into fragments.
6) Set the Fragment Index subfield from 0 to *n*–1 for successive fragments.
7) Calculate the hash value of each fragment (see 12.15.2.1 (Signature of an EBCS Info frame)) except the first one and set the corresponding Fragment Hash Values field(s).
8) Calculate the signature value (see 12.15.2.1 (Signature of an EBCS Info frame)) and set the Signature field in the first fragment.
9) Transmit the fragments in order of the value of Fragment Index field. EBCS data frames shall not be transmitted before all of the fragments are transmitted.

The EBCS Info frame fragmentation is shown in Figure 34-2 (EBCS Info frame fragmentation(11bc)).

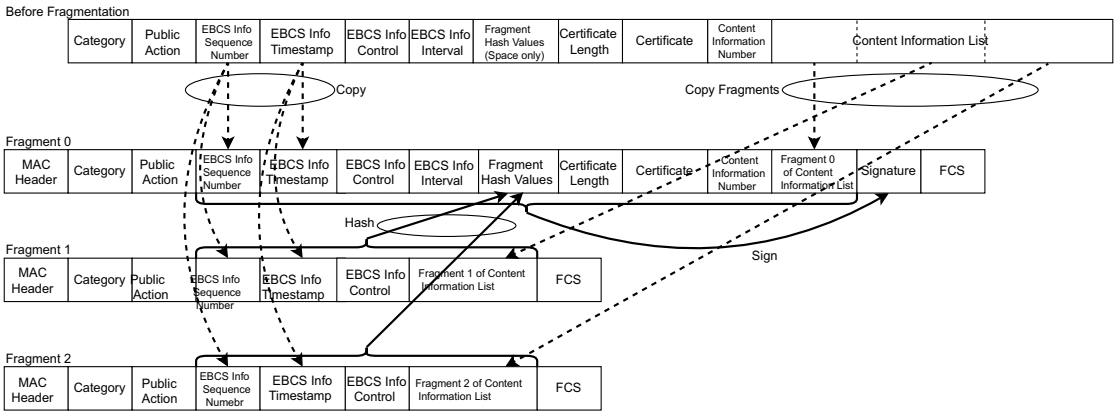

**Figure 34-2—EBCS Info frame fragmentation(11bc)**

### 34.3.6 EBCS Info frame defragmentation

The EBCS Info frame defragmentation procedure is described in 12.15.2.2 (Authentication of an EBCS Info frame).

### 34.3.7 EBCS negotiation for associated STAs

To request one or more EBCS traffic streams provided by an EBCS AP, with which an EBCS non-AP STA is associated, the STA shall transmit an EBCS Content Request frame to the EBCS AP. To request one or more EBCS traffic streams that an EBCS AP has indicated require association, an unassociated EBCS non-AP STA shall associate with the EBCS AP and subsequently transmit an EBCS Content Request frame. A request for one or more EBCS traffic streams that does not require association may also be included in the

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

same EBCS Content Request frame. When requesting an EBCS traffic stream using an EBCS Content Request frame, an EBCS non-AP STA may request an EBCS traffic stream with a certain time to termination as indicated in the Requested Time To Termination field included in the EBCS Content Request frame. In addition, the STA may indicate the MAC address of the AP it is currently receiving the service from, using the Broadcaster MAC Address subfield. The non-AP STA may include in the Broadcaster MAC Address subfield in the EBCS Content Request frame the MAC address of the AP currently serving the EBCS traffic stream, which may differ from the AP receiving the request. This information may be used to distribute the EBCS load transmitted by different EBCS APs in a certain area.

An EBCS STA that receives an EBCS Content Request Info subfield shall determine the presence of fields(s) based on the corresponding presence bits in the EBCS Content Request Info Control subfield.

NOTE 1—An EBCS receiving STA determines the end of the EBCS Content Request Info subfield based on the EBCS Content Request Info Length field and skips fields that it cannot decode.

After receiving an EBCS Content Request frame from an associated EBCS non-AP STA, an EBCS AP shall respond with an EBCS Content Response frame. The status of the request for the EBCS traffic stream identified by a content ID is indicated by the EBCS Content Request Status subfield in the EBCS Content Response Info subfield containing the same content ID. If the EBCS AP indicates in the EBCS Content Response frame that the request for an EBCS traffic stream is successful, it may include a Time To Termination field to indicate the time to termination for the EBCS traffic stream. It may also include EBCS SP duration and the EBCS SP interval for the EBCS traffic stream in the EBCS Content Response frame.

An EBCS STA that receives an EBCS Content Response Info field shall determine the presence of fields(s) based on the corresponding presence bits in the EBCS Content Request Info Control subfield.

NOTE 2—An EBCS receiving STA determines the end of the EBCS Content Request Info subfield based on the EBCS Content Request Info Length field and skips fields that it cannot decode.

An EBCS non-AP STA that receives an EBCS Content Response frame may negotiate for the extension of an EBCS traffic stream if the EBCS traffic stream indicated in one of the EBCS Content Response Info subfields terminates earlier than desired. The EBCS STA may negotiate the extension of the EBCS traffic stream by transmitting another EBCS Content Request frame to its associated AP by including a desired value in the Requested Time To Termination subfield in the EBCS Content Request Info subfield whose Content ID subfield corresponds to the EBCS traffic stream.

An EBCS non-AP STA that received an EBCS Termination Notice frame may negotiate for the extension of an EBCS traffic stream using an EBCS Content Request frame if the EBCS traffic stream indicated in one of the EBCS Termination Info subfields terminates earlier than desired and the Negotiation Method indicated in the same EBCS Termination Info subfield is set to 1 or 2. The EBCS STA may negotiate the extension of the EBCS traffic stream by transmitting an EBCS Content Request frame to its associated AP by including a desired value in the Requested Time To Termination subfield in the EBCS Content Request Info subfield whose Content ID subfield corresponds to the EBCS traffic stream.

NOTE 3—Which values of a received Time To Termination subfield are considered desirable is determined by the receiving EBCS non-AP STA and is beyond the scope of this standard.

NOTE 4—The EBCS transmitter of an EBCS traffic stream has the authority to determine the time to termination of the EBCS traffic stream.

### 34.3.8 EBCS negotiation for unassociated STAs

An unassociated EBCS STA may transmit an EBCS Content Request ANQP-element to an EBCS AP to register for one or more EBCS traffic streams when that AP has indicated that association is not required for those streams. When registering for an EBCS traffic stream using an EBCS Content Request ANQP-

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

element, an EBCS STA may request a specific time to termination using the Requested Time To Termination subfield and may indicate the MAC address of the AP it is currently receiving the service from using the Broadcaster MAC Address subfield. The Broadcaster MAC Address subfield allows the non-AP STA to provide the MAC address of the AP currently serving the EBCS traffic stream, which might not be the same as the one receiving the request. This information might be used to distribute the EBCS load transmitted by different EBCS APs in a certain area.

After receiving an EBCS Content Request ANQP-element from an unassociated EBCS STA, an EBCS AP shall respond with EBCS Content Response ANQP-element indicating the acceptance or rejection of the request to start transmitting each EBCS traffic stream indicated in the EBCS Content Request ANQP-element. If the EBCS AP accepts a request for an EBCS traffic stream, it may include a Time To Termination subfield in the EBCS ANQP-element to indicate the time to termination for the EBCS traffic stream.

An unassociated EBCS STA that received an EBCS Termination Notice frame may negotiate for the extension of an EBCS traffic stream using an EBCS Content Request ANQP-element if the EBCS traffic stream indicated in one of the EBCS Termination Info subfields terminates earlier than desired and the Negotiation Method indicated in the same EBCS Termination Info subfield is set to 2. The EBCS STA may negotiate the extension of the EBCS traffic stream by transmitting an EBCS Content Request ANQP-element to the EBCS AP from which the EBCS Termination Notice frame is received by including a desired value in the Requested Time To Termination subfield in the EBCS Content Request Info subfield whose Content ID subfield corresponds to the EBCS traffic stream.

NOTE—The EBCS AP has the authority to determine the time to termination of the EBCS traffic stream. ANQP-elements received from unassociated STAs are not protected and hence the EBCS AP might exercise caution in accepting certain requested durations. An EBCS AP evaluates certain criteria before responding to the EBCS service request from an unassociated STA from which it receives an EBCS Content Request ANQP-element. Such criteria might include, but are not limited to, limiting the time duration and/or frequency of EBCS traffic stream requests. The evaluation of the criteria might be based on local policies installed at the EBCS AP, which is out of scope of this standard.

An EBCS STA that has registered for an EBCS traffic stream using an EBCS Content Request ANQP-element may deregister for the EBCS traffic stream when it no longer consumes the traffic stream. In order to deregister, the EBCS STA shall send a frame containing an EBCS Content Request ANQP-element to the EBCS AP that is transmitting the EBCS traffic stream. The Broadcast Action bit in the EBSCS Content Request Info Control subfield in the EBCS Content Request Info subfield containing the content ID of the EBCS traffic stream for which the EBCS STA attempts to deregister shall be set to 0.

An EBCS STA may combine registering for one or more EBCS traffic streams and deregistering for one or more EBCS traffic streams by sending one frame that contains one EBCS Content Request ANQP-element, in which one or more EBCS Content Request Info subfields contain a Broadcast Action bit set to 1 and one or more EBCS Content Request Info subfields containing a Broadcast Action bit set to 0.

After receiving an EBCS Content Request ANQP-element from an unassociated EBCS STA that registered for one or more EBCS traffic streams, with the Broadcast Action bit set to 0 in an EBCS Content Request Info subfield for one or more EBCS traffic streams, an EBCS AP shall respond with an EBCS Content Response ANQP-element with the EBCS Content Request Status bit set to 1 in the EBCS Content Response Info subfield containing the content ID for the traffic stream for which the EBCS STA is requesting deregistration.

The EBCS AP, after receiving an EBCS Content Request ANQP-element from an unassociated EBCS STA that registered for one or more EBCS traffic streams, with the Broadcast Action bit set to 0 in an EBCS Content Request Info subfield for one or more EBCS traffic streams, may terminate the transmission of the EBCS traffic streams. The EBCS AP shall follow the EBCS termination notice procedure (see 34.3.9 (EBCS

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

termination notice and extension negotiation)) prior to termination the transmission of the EBCS traffic streams.

### 34.3.9 EBCS termination notice and extension negotiation

The EBCS termination notice procedure allows a STA that is a broadcaster of EBCS traffic streams to indicate that one or more of the EBCS traffic streams that it is broadcasting is to be terminated. In EBCS DL, a broadcaster of one or more EBCS traffic streams is an EBCS AP.

An EBCS STA shall start to transmit EBCS Termination Notice frames if one or more EBCS that it is transmitting will terminate within an interval that is equal to or shorter than dot11EBCSTerminationNoticeTime, if the STA is not periodically transmitting a schedule for the EBCS traffic stream that is to be terminated. If the EBCS STA starts to transmit EBCS Termination Notice frames, the STA shall transmit the EBCS Termination Notice frames with a period that is larger than dot11EBCSTerminationNoticeMinimumInterval and smaller than dot11EBCSTerminationNoticeMaximumInterval.

The EBCS STA transmitting an EBCS Termination Notice frame shall indicate in the Time To Termination subfield in an EBCS Termination Info subfield the number of TBTTs before the EBCS traffic stream identified by the content ID contained in the Content ID subfield in the same EBCS Termination Info subfield terminates.

The EBCS STA transmitting an EBCS Termination Notice frame shall indicate in the Negotiation Method subfield in an EBCS Termination Info subfield the negotiation method that a STA should use to negotiate for the extension of the EBCS traffic stream identified by the content ID contained in the Content ID subfield in the same EBCS Termination Info subfield. The EBCS STA transmitting an EBCS Termination Notice frame may indicate in the Negotiation Address subfield in an EBCS Termination Info subfield the address associated with the negotiation method indicated in the Negotiation Method subfield in the same EBCS Termination Info subfield that a STA should use to negotiate for the extension of the EBCS traffic stream identified by the content ID contained in the Content ID subfield in the same EBCS Termination Info subfield.

After transmitting an EBCS Termination Notice frame, an EBCS STA shall transmit an EBCS Termination Notice frame with an updated value in the Time To Termination subfield in an EBCS Termination Info subfield if the EBCS traffic stream identified by the content ID in the Content ID subfield in the same EBCS Termination Info subfield has been negotiated to have a new time to termination value. If the negotiated duration for the EBCS traffic stream is longer than the maximum time to termination value, the transmitting STA shall set the Time To Termination subfield to 65 535.

An EBCS STA that receives an EBCS Termination Notice frame shall negotiate for the extension of an EBCS traffic stream if the EBCS traffic stream indicated in one of the EBCS Termination Info subfields terminates earlier than desired. If the EBCS STA negotiates the extension of the EBCS traffic stream, it shall use the negotiation method indicated in the Negotiation Method subfield in the EBCS Termination Info subfield (see 34.3.7 (EBCS negotiation for associated STAs) and 34.3.8 (EBCS negotiation for unassociated STAs)).

An EBCS STA that receives an EBCS Termination Info subfield shall determine the presence of fields(s) based on the corresponding presence bits in the EBCS Termination Info Control subfield.

NOTE 1—An EBCS receiving STA determines the end of the EBCS Termination Info subfield based on the EBCS Termination Info Length field and skips fields that it cannot decode.

An EBCS STA shall not transmit an EBCS Content Request frame or a frame containing an EBCS Content Request ANQP-element requesting an EBCS traffic stream if the STA receives an EBCS Termination

This is an unapproved IEEE Standards Draft, subject to change.

Notice frame with an acceptable time to termination value contained in the EBCS Termination Info subfield containing the content ID of the EBCS traffic stream.

NOTE 2—Whether a value in a received Time To Termination subfield is considered acceptable is determined by the receiving STA and is beyond the scope of this standard.

## 34.4 EBCS UL procedure

### 34.4.1 General

The EBCS UL procedure allows a non-AP STA to transmit an EBCS UL frame containing an HLP payload that is intended to be relayed by one or more EBCS relaying STAs to a destination specified in the frame. EBCS UL does not use Data frames and the EBCS DL Filtering block in Figure 5-1 (MAC data plane architecture (#7109)(#4149)(#1001)(11ay)(#3186)(#3185)(#4172)(#4192)(11bc)) does not apply.

NOTE—The relaying service is best effort with no guarantee that the HLP payload will be delivered to the specified destination.

### 34.4.2 EBCS UL procedure at an EBCS relaying STA

An EBCS relaying STA provides access to a relaying service (via its affiliated EBCS proxy) in which the HLP payload carried in an EBCS UL frame received from an EBCS non-AP STA is relayed to a destination specified in the frame (see 4.5.12.3 (EBCS relaying service) and 34.4.4 (EBCS UL procedure at an EBCS proxy)).

NOTE 1—An EBCS relaying STA can be an AP that has established its own infrastructure BSS or a STA that provides a relaying service without establishing an infrastructure BSS.

NOTE 2—An EBCS AP that relays an HLP payload to the specified destination via its EBCS proxy can be in an unassociated state with the non-AP STA that transmitted the EBCS UL frame carrying the HLP payload.

An EBCS relaying STA shall have dot11EBCSRelayingServiceImplemented equal to true. Otherwise, dot11EBCSRelayingServiceImplemented shall not be true. Among all APs in a multiple BSSID set, only the AP corresponding to the transmitted BSSID may be affiliated with an EBCS proxy. Among all APs in a cohosted BSSID set, only one AP may be affiliated with an EBCS proxy.

An EBCS relaying STA may filter traffic based on the EBCS content MAC address carried in the Address 3 field of a received frame to determine that the frame is an EBCS UL frame. An EBCS relaying STA may further filter traffic based on the value carried in the Address 1 field of a received EBCS UL frame.

NOTE 3—An EBCS relaying STA that is affiliated with an EBCS proxy can ignore an EBCS UL frame whose Address 3 field does not match the one or more EBCS content MAC addresses that can be based on the relationship between the EBCS proxy and one or more destinations. Furthermore, an EBCS relaying STA can be configured to ignore EBCS UL frames based on the value carried in the Address 1 field.

### 34.4.3 EBCS UL procedure at an EBCS non-AP STA

An EBCS non-AP STA may transmit an EBCS UL frame without receiving a Beacon frame, S1G Beacon frame, PV1 Probe Response frame, or a Probe Response frame with the EBCS Relaying Supported field of the Extended Capabilities element set to 1. The address fields are defined in 9.3.3.1 (Format of (PV0) Management frames) where the Address 1 field of the frame shall be set to a group address. The EBCS content MAC address is formatted as described in 34.2 (EBCS addressing).

NOTE—The group address value of the Address 1 field can be either set to a broadcast address or a multicast address to differentiate different types of EBCS UL traffic belonging to the same UL traffic stream. For example, an EBCS non-AP STA could transmit different EBCS UL frames, each carrying a different EBCS UL traffic and having the Address 1

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

field set to a different group address value. The Address 3 field is set to the EBCS content MAC address, which is unique to the UL traffic stream (see 34.2 (EBCS addressing)).

An EBCS non-AP STA should include its certificate in an EBCS UL frame to allow the EBCS proxy to authenticate the EBCS non-AP STA (see 12.15.2.6 (Authentication of an EBCS UL frame)).

When an EBCS non-AP STA has time information, the Frame Tx Time field shall indicate the time when the EBCS UL frame is queued for transmission.

NOTE—How an EBCS non-AP STA, that transmits an EBCS UL frame while in an unassociated state, obtains time information is out of scope of this standard.

An EBCS non-AP STA should include the Frame Count field in an EBCS UL frame that it transmits to reduce the possibility of a successful replay attack. When the STA provides a frame count, the Frame Count field shall carry a value that is equal to 1 in the first EBCS UL frame that the STA transmits and shall be incremented for each subsequent transmission of an EBCS UL frame.

The Frame Signature field, if present in the EBCS UL frame, shall be computed as defined in 12.15.2.5 (Signature of the EBCS UL frame).

### 34.4.4 EBCS UL procedure at an EBCS proxy

An EBCS proxy evaluates various criteria such as the ones described in 12.15.2.6 (Authentication of an EBCS UL frame) to decide whether to relay the HLP payload to the specified destination. An EBCS proxy may limit the amount or frequency of payloads that are relayed to the specified destination. An EBCS proxy may embed additional information before relaying the HLP payload to the specified destination. The evaluation of criteria, the decision to limit the amount or frequency of relaying, and the decision to embed additional information can be based on local policies or based on a relationship established with the specified destination.

NOTE 1—The establishment of such a relationship is out of scope of this standard.

NOTE 2—An EBCS proxy can decide to not relay the HLP payload for any reason such as not having a relationship with the specified destination or the implemented criteria for relaying not being satisfied.

An EBCS proxy that decides to relay an HLP payload shall generate and transmit one or more IP packets carrying the HLP payload addressed to the specified destination.

# Annex B

(normative)

# Protocol Implementation Conformance Statement (PICS) proforma

***Editor's Note: Any <year> below will be replaced by the year of publication by the IEEE SA publication.***

## B.1 Introduction

The supplier of a protocol implementation that is claimed to comply with IEEE Std 802.11-<year>(#1147) shall complete the following protocol implementation conformance statement (PICS) proforma.

A completed PICS proforma is the PICS for the implementation in question. The PICS is a statement of which capabilities and options of the protocol have been implemented. This annex might not be compatible with operation in any Regulatory Domain or describe combinations of usable features in any Regulatory Domain. The PICS has a number of uses, including use:

a) By the protocol implementer, as a checklist to reduce the risk of failure to comply with the standard through oversight;

b) By the supplier and acquirer, or potential acquirer, of the implementation, as a detailed indication of the capabilities of the implementation, stated relative to the common basis for understanding provided by the standard PICS proforma;

c) By the user, or potential user, of the implementation, as a basis for initially checking the possibility of interworking with another implementation (note that, while interworking is not guaranteed, failure to interwork can often be predicted from incompatible PICS proformas);

d) By a protocol tester, as the basis for selecting appropriate tests against which to assess the claim for compliance of the implementation.

## B.2 Abbreviations and special symbols

### B.2.1 Symbols for Status column

M mandatory
O optional
O.<n> optional — Support of at least one of the group of options labeled by the same numeral <n> is required. The scope of the group of options is limited to a single table (i.e., subclause) within the PICS.
pred: predicate identification

### B.2.2 General abbreviations for Item and Support columns

N/A not applicable
AD address function
AVT audio video transport
CDMG-M China directional multi-gigabit (CDMG) medium access control (MAC) features
CDMG-P China directional multi-gigabit (CDMG) physical layer (PHY) features

## B.3 Instructions for completing the PICS proforma

### B.3.1 General structure of the PICS proforma

The first parts of the PICS proforma, Implementation identification and Protocol summary, are to be completed as indicated with the information necessary to identify fully both the supplier and the implementation.

The main part of the PICS proforma is a fixed questionnaire, divided into subclauses, each containing a number of individual items. Answers to the questionnaire items are to be provided in the rightmost column, either by simply marking an answer to indicate a restricted choice (usually Yes or No) or by entering a value or a set or a range of values. (Note that there are some items where two or more choices from a set of possible answers may apply. All relevant choices are to be marked in these cases.)

Each item is identified by an item reference in the first column. The second column contains the question to be answered. The third column contains the reference or references to the material that specifies the item in the main body of this standard. The remaining columns record the status of each item, i.e., whether support is mandatory, optional, or conditional, and provide the space for the answers (see also B.3.4 (Conditional status)). Marking an item as supported is to be interpreted as a statement that all relevant requirements of the subclauses and normative annexes, cited in the References column for the item, are met by the implementation.

A supplier may also provide, or be required to provide, further information, categorized as either Additional Information or Exception Information. When present, each kind of further information is to be provided in a further subclause of items labeled A<*I*> or X<*I*>, respectively, for cross-referencing purposes, where <*I*> is any unambiguous identification for the item (e.g., simply a numeral). There are no other restrictions on its format or presentation.

A completed PICS proforma, including any Additional Information and Exception Information, is the PICS for the implementation in question.

NOTE—Where an implementation is capable of being configured in more than one way, a single PICS might be able to describe all such configurations. However, the supplier has the choice of providing more than one PICS, each covering some subset of the implementation's capabilities, if this makes for easier and clearer presentation of the information.

### B.3.2 Additional information

Items of Additional Information allow a supplier to provide further information intended to assist in the interpretation of the PICS. It is not intended or expected that a large quantity of information will be supplied, and a PICS can be considered complete without any such information. Examples of such Additional Information might be an outline of the ways in which an (single) implementation can be set up to operate in a variety of environments and configurations, or information about aspects of the implementation that are outside the scope of this standard but have a bearing upon the answers to some items.

References to items of Additional Information may be entered next to any answer in the questionnaire, and may be included in items of Exception Information.

### B.3.3 Exception information

It may happen occasionally that a supplier wishes to answer an item with mandatory status (after any conditions have been applied) in a way that conflicts with the indicated requirement. No preprinted answer is found in the Support column for this. Instead, the supplier shall write the missing answer into the Support

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

column, together with an X<*I*> reference to an item of Exception Information, and shall provide the appropriate rationale in the Exception Information item itself.

An implementation for which an Exception Information item is required in this way does not comply with this standard.

NOTE—A possible reason for the situation described above is that a defect in this standard has been reported, a correction for which is expected to change the requirement not met by the implementation.

### B.3.4 Conditional status

The PICS proforma contains a number of conditional items. These are items for which both the applicability of the item itself, and its status if it does apply, mandatory or optional, are dependent upon whether certain other items are supported.

Where a group of items is subject to the same condition for applicability, a separate preliminary question about the condition appears at the head of the group, with an instruction to skip to a later point in the questionnaire if the N/A answer is selected. Otherwise, individual conditional items are indicated by a conditional symbol in the Status column.

A conditional symbol is of the form "<pred>:<S>" or "O" (or "O.<n>"), where "<pred>" is a predicate as described below, and "<S>" is one of the status symbols "M" or "O" (or "O.<n>").

If the value of a predicate is true, the conditional symbol is applicable, and yields the status given by S. If any applicable conditional symbol yields mandatory status, the conditional item has mandatory status. Otherwise, if any applicable conditional symbol [including one of the form "O" (or "O.<n>")] yields optional status, the conditional item has optional status. In either case, the support column is to be completed in the usual way. If no conditional symbol is applicable, the conditional item is not relevant and the N/A answer is to be marked.

A predicate is one of the following:

a) An item-reference for an item in the PICS proforma: the value of the predicate is true if the item is marked as supported and is false otherwise.

b) An expression constructed by combining item-references using the boolean operators (in decreasing order of precedence) "NOT", "AND", and "OR", with or without the use of parenthetical groupings: the value of the predicate is true if the expression evaluates to true and is false otherwise.

NOTE—If optional feature F1 requires features F2 and F3, this can be represented in the PICS in one of two ways:
— The status for conditional items F2 and F3 is "F1:M" and the status for conditional item F1 is "O", or
— The status for conditional item F1 is "F2 AND F3:O".

If feature F1 is required if feature F2 or F3 is supported, and is optional otherwise, this can be represented in the PICS in one way:
— The status for conditional item F1 is "F2 OR F3:M" and "O".

If feature F1 is required if feature F2 or F3 is supported, and is not relevant otherwise, this can be represented in the PICS in one way:
— The status for conditional item F1 is "F2 OR F3:M".

If feature F1 is required if feature F2 is supported, is optional if feature F3 is supported, and is not relevant otherwise, this can be represented in the PICS in one way:
— The status for conditional item F1 is "F2:M" and "F3:O".

Conditional symbols can be given in any order.

Each item referenced in a predicate, or in a preliminary question for grouped conditional items, is indicated by an asterisk in the Item column.

## B.4 PICS proforma—IEEE Std 802.11-2020[58]

### B.4.1 Implementation identification

| | |
|---|---|
| Supplier | |
| Contact point for queries about the PICS | |
| Implementation Name(s) and Version(s) | |
| Other information necessary for full identification, e.g., name(s) and version(s) of the machines and/or operating system(s), system names | |

NOTE 1—Only the first three items are required for all implementations. Other information might be completed as appropriate in meeting the requirement for full identification.

NOTE 2—The terms Name and Version need to be interpreted appropriately to correspond with a supplier's terminology (e.g., Type, Series, Model).

### B.4.2 Protocol summary

| | | | | |
|---|---|---|---|---|
| Identification of protocol standard | IEEE Std 802.11-2020 | | | |
| Identification of amendments and corrigenda to this PICS proforma that have been completed as part of this PICS | Amd. | : | Corr. | : |
| | Amd. | : | Corr. | : |
| Have any exception items been required? (See B.3.3 (Exception information); the answer Yes means that the implementation does not comply with IEEE Std 802.11-2020.) | Yes ☐ No ☐ | | | |

[58] *Copyright release for PICS proforma:* Users of this standard may freely reproduce the PICS proforma in this annex so that it can be used for its intended purpose and may further publish the completed PICS.

### B.4.4.2 MAC frames *(continued)*

| Item | MAC frame | References | Status | Support |
|---|---|---|---|---|
| (11az)FR73 | Reception of TF subvariant Passive Sounding | 9.3.1.23.5 (Passive sounding subvariant) | (CFISTA AND CFPTB):M CFPLPSTA:M | Yes ☐ No ☐ N/A ☐ |
| (11az)FR74 | Reception of Ranging NDP Announcement frame | 9.3.1.19 (VHT/HE/ Ranging NDP Announcement frame format(11ax )(11az)) | (CFISTA AND CFPTB):M CFPLPSTA:M | Yes ☐ No ☐ N/A ☐ |

### B.4.4.3 Frame exchange sequences

| Item | Frame exchange sequence | References | Status | Support |
|---|---|---|---|---|
| | Are the following frame exchange sequences supported? | | | |
| FS1 | Basic frame exchange sequences | 10.3.2.6 (RTS/CTS with fragmentation), 10.3.2.9 (CTS and DMG CTS procedure), 10.3.2.11 (Acknowledgment procedure), 10.3.5 (Individually addressed MPDU transfer procedure), 10.3.6 (Group addressed MPDU transfer procedure) | M | Yes ☐ No ☐ |

### B.4.4.4 MAC addressing functions

| Item | MAC Address function | References | Status | Support |
|---|---|---|---|---|
| | Are the following MAC Addressing functions supported? | | | |
| AD1 | STA universal individual IEEE 802 address | 9.2.4.3 (Address fields) | M | Yes ☐ No ☐ |
| AD2 | BSS identification (BSSID) generation | 9.2.4.3 (Address fields), 11.1.4 (Acquiring synchronization , scanning) | M | Yes ☐ No ☐ |

### B.4.8 Regulatory domain extensions *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| MD15.1 | Multiple classes in Country element | 10.22.3 (Operation with operating classes) | MD15:M | Yes ☐ No ☐ N/A ☐ |
| MD15.2 | Multiple classes in (Re)Association Request and Response frames | 10.22.3 (Operation with operating classes) | MD15:M | Yes ☐ No ☐ N/A ☐ |

### B.4.9 ERP functions

| Item | PHY features | References | Status | Support |
|---|---|---|---|---|
| *ERP1 | Transmit and Receive ERP-DSSS data rates 1 and 2 Mb/s and ERP-CCK data rates 5.5 and 11 Mb/s | 18.3.2 (PPDU format) | CFERP:M | Yes ☐ No ☐ N/A ☐ |
| ERP1.1 | Transmit and receive ERP-OFDM data rates of 6, 12, and 24 Mb/s | 18.3.2 (PPDU format) | CFERP:M | Yes ☐ No ☐ N/A ☐ |
| ERP1.2 | Transmit and receive ERP-OFDM data rate of 9 Mb/s | 18.3.2 (PPDU format) | ERP1:O | Yes ☐ No ☐ N/A ☐ |
| ERP1.3 | Transmit and receive ERP-OFDM data rate of 18 Mb/s | 18.3.2 (PPDU format) | ERP1:O | Yes ☐ No ☐ N/A ☐ |
| ERP1.4 | Transmit and receive ERP-OFDM data rate of 36 Mb/s | 18.3.2 (PPDU format) | ERP1:O | Yes ☐ No ☐ N/A ☐ |
| ERP1.5 | Transmit and receive ERP-OFDM data rate of 48 Mb/s | 18.3.2 (PPDU format) | ERP1:O | Yes ☐ No ☐ N/A ☐ |
| ERP1.6 | Transmit and receive ERP-OFDM data rate of 54 Mb/s | 18.3.2 (PPDU format) | ERP1:O | Yes ☐ No ☐ N/A ☐ |
| ERP2 | *Reserved* | | | |
| ERP3 | *Reserved* | | | |
| ERP4 (#6009) | *Reserved* | | | |
| ERP5 | Able to transmit and receive long and short DSSS as well as OFDM preambles | 18.3.2 (PPDU format) | CFERP:M | Yes ☐ No ☐ N/A ☐ |

## B.4.9 ERP functions *(continued)*

| Item | PHY features | References | Status | Support |
|---|---|---|---|---|
| ERP6 | Set SERVICE field bits for locked clocks, and length extension | 18.3.2.2 (Long preamble PPDU format) | CFERP:M | Yes ☐ No ☐ N/A ☐ |
| ERP7 | Set B1 and B4 of long and short preamble PPDU SERVICE field to 0 | 18.3.2.2 (Long preamble PPDU format) | CFERP:M | Yes ☐ No ☐ N/A ☐ |
| ERP8 | Set B2 to 1 in all long and short preamble PPDU SERVICE fields | 18.3.2.2 (Long preamble PPDU format) | CFERP:M | Yes ☐ No ☐ N/A ☐ |
| ERP9 | Set B7 of the long and short preamble PPDU SERVICE fields as described in the reference | 18.3.2.2 (Long preamble PPDU format), 18.3.2.3 (Short preamble PPDU format) | CFERP:M | Yes ☐ No ☐ N/A ☐ |
| ERP10 | Use Clause 15 (DSSS PHY specification for the 2.4 GHz band designated for ISM applications) (DSSS for 2.4 GHz band for ISM applications) or Clause 16 (High rate direct sequence spread spectrum (HR/DSSS) PHY specification) (HR/DSSS) rates when using protection mechanisms | 10.27 (Protection mechanisms) | CFERP:M | Yes ☐ No ☐ N/A ☐ |
| ERP11 | *Reserved* | | | |
| ERP12 | *Reserved* | | | |
| ERP13 | *Reserved* | | | |
| ERP14 | *Reserved* | | | |
| ERP15 | *Reserved* | | | |
| ERP16 | Add signal extension of 6 μs | 18.3.2.4 (ERP-OFDM PPDU format) | CFERP:M | Yes ☐ No ☐ N/A ☐ |
| ERP17 | Simultaneous CCA on long preamble Barker, short preamble Barker, and OFDM | 18.3.4 (CCA) | CFERP:M | Yes ☐ No ☐ N/A ☐ |

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

## B.4.9 ERP functions *(continued)*

| Item | PHY features | References | Status | Support |
|---|---|---|---|---|
| ERP18 | CCA with energy detect above threshold and CS | 18.3.4 (CCA) | CFERP:M | Yes ☐ No ☐ N/A ☐ |
| ERP19 | *Reserved* | | | |
| ERP20 | Able to automatically detect format of long preamble Barker, short preamble Barker, and OFDM and receive appropriately | 18.3.6 (PHY receive procedure) | CFERP:M | Yes ☐ No ☐ N/A ☐ |
| ERP21 | Comply with local regulatory frequency allocation requirements | 18.4.2 (Regulatory requirements) | CFERP:M | Yes ☐ No ☐ N/A ☐ |
| ERP22 | Use frequency plan for 2.4 GHz | 18.4.3 (Operating channel frequencies) | CFERP:M | Yes ☐ No ☐ N/A ☐ |
| ERP23 | Comply with regulatory spurious emissions regulations | 18.4.4 (Transmit and receive in-band and out-of-band spurious emissions) | CFERP:M | Yes ☐ No ☐ N/A ☐ |
| ERP24 | Slot time requirements | 18.5.4 (ERP) | CFERP:M | Yes ☐ No ☐ N/A ☐ |
| ERP25 | Support short slot time | 18.5.4 (ERP) | CFERP:O | Yes ☐ No ☐ N/A ☐ |
| ERP26 | Use 10 μs short interframe space (SIFS) time | 18.4.6 (CCA performance) | CFERP:M | Yes ☐ No ☐ N/A ☐ |
| ERP27 | Comply with regulatory transmit power requirements | 18.4.7.2 (Transmit power levels) | CFERP:M | Yes ☐ No ☐ N/A ☐ |
| ERP28 | ± 25 ppm frequency tolerance | 18.4.7.4 (Transmit center frequency tolerance) | CFERP:M | Yes ☐ No ☐ N/A ☐ |
| ERP29 | Use locked clocks | 18.4.7.4 (Transmit center frequency tolerance), 18.4.7.5 (Symbol clock frequency tolerance) | CFERP:M | Yes ☐ No ☐ N/A ☐ |

## B.4.12 QoS base functionality *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| (11ay)QB4.3.3 | EDMG Compressed BlockAck | 9.3.1.8.7 (EDMG Compressed BlockAck variant(11ay)) | CFEDMG:M | Yes ☐ No ☐ N/A ☐ |
| QB4.4 | Reserved(#6599) | | | Yes ☐ No ☐ N/A ☐ |
| (11ay)QB4.4.1 | Reserved(#4251) | | | |
| (11ay)QB4.4.2 | EDMG Multi-TID BlockAck | 9.3.1.8.8 (EDMG Multi-TID BlockAck variant(11ay)) | CFEDMG:O | Yes ☐ No ☐ N/A ☐ |
| (11ax)QB4.5 | Multi-STA BlockAck | 9.3.1.8.6 (Multi-STA BlockAck variant(11ax)) | CFHE:M | Yes ☐ No ☐ N/A ☐ |
| (M118)* QB5 | Automatic power save delivery (APSD) | 9.6.3 (QoS Action frame details), 11.2.3 (Power management in a non-DMG infrastructure network) | (CFAP (#4138)AND CFQoS):O (CFIndepSTA (#4138)AND CFQoS):O | Yes ☐ No ☐ N/A ☐ |

## B.4.13 QoS enhanced distributed channel access (EDCA)

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| QD1 | Support for four transmit queues with a separate channel access entity associated with each | 10.2.3.2 (HCF contention based channel access (EDCA)), 10.23.2.1 (Reference model) | (#4138)NOT CFDMG AND CFQoS:M CFS1G AND S1GM20.5: M CFS1G AND S1GM20.4:O | Yes ☐ No ☐ N/A ☐ |
| QD2 | Per-channel access function differentiated channel access | 10.23.2.2 (EDCA backoff procedure), 10.23.2.4 (Obtaining an EDCA TXOP), 10.23.2.12 (Retransmit procedures) | (#4138)NOT CFDMG AND CFQoS:M | Yes ☐ No ☐ N/A ☐ |
| QD3 | Multiple frame exchange sequences in an ECDA TXOP support(#109) | 10.23.2.8 (Multiple frame exchange sequences in an EDCA TXOP(#109)) | CFQoS OR CFDMG OR CFS1G:O | Yes ☐ No ☐ N/A ☐ |
| QD4 | Maintenance of within-queue ordering, exhaustive retransmission when sending non-QoS Data frames | 10.23.2.12 (Retransmit procedures) | (CFQoS AND NOT CFS1G) OR CFDMG:M | Yes ☐ No ☐ N/A ☐ |

## B.4.15 Radio management extensions

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| | Are the following Radio Measurement capabilities supported? | | | |
| RM1 | (M118)Radio measurement capability | 9.4.1.4 (Capability Information field) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM2 | Action frame protocol for measurements | 9.5.7 (EDMG BRP field(11ay)) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM2.1 | Radio Measurement Request frame | 9.6.6.2 (Radio Measurement Request frame format) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM2.2 | Radio Measurement Report frame | 9.6.6.3 (Radio Measurement Report frame format) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM2.3 | Link Measurement Request frame | 9.6.6.4 (Link Measurement Request frame format) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM2.4 | Link Measurement Report frame | 9.6.6.5 (Link Measurement Report frame format) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM2.4.1 | Link Measurement Report frame | 9.6.6.5 (Link Measurement Report frame format) | (#4138)NOT CF DMG AND CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM2.4.2 | Link Measurement Report frame | 9.6.6.5 (Link Measurement Report frame format), 9.4.2.147 (Relay Transfer Parameter Set element), 9.4.2.148 (Quiet Period Request element), 10.41.9 (CDMG enhanced beam tracking) | CFDMG AND CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM2.5 | Neighbor Report Request | | | |
| RM2.5.1 | Generate and transmit Neighbor Report Request | 9.6.6.6 (Neighbor Report Request frame format) | (CFRM AND CFSTAofAP):M | Yes ☐ No ☐ N/A ☐ |
| RM2.5.2 | Receive and process Neighbor Report Request | 9.6.6.6 (Neighbor Report Request frame format) | (CFRM AND CFAP):M | Yes ☐ No ☐ N/A ☐ |
| RM2.6 | Neighbor Report Response | | | |

## B.4.15 Radio management extensions *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| RM2.6.1 | Generate and transmit Neighbor Report Response | 9.4.2.35 (Neighbor Report element), 9.6.6.7 (Neighbor Report Response frame format) | (CFRM AND CFAP):M | Yes ☐ No ☐ N/A ☐ |
| RM2.6.2 | Receive and process Neighbor Report Response | 9.4.2.35 (Neighbor Report element), 9.6.6.7 (Neighbor Report Response frame format) | (CFRM AND CFSTAofAP):M | Yes ☐ No ☐ N/A ☐ |
| RM3 | General protocol for requesting and reporting of measurements | 9.4.2.19 (Measurement Request element), 9.4.2.20 (Measurement Report element), 11.10 (Radio measurement procedures), 11.10.6 (Requesting and reporting of measurements) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM3.1 | Parallel Measurements | 9.4.2.19 (Measurement Request element), 9.4.2.20 (Measurement Report element), 11.10.6 (Requesting and reporting of measurements) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM3.2 | Use of Enable, Request and Report subfields(#291) to enable/disable measurement requests and triggered autonomous reports Measurement Requests | 9.4.2.19 (Measurement Request element), 11.10.6 (Requesting and reporting of measurements), 11.10.8 (Triggered autonomous reporting) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM3.3 | Enable Autonomous Report | 9.4.2.19 (Measurement Request element), 11.10.8 (Triggered autonomous reporting) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM3.4 | Duration Mandatory | 9.4.2.19 (Measurement Request element), 11.10.4 (Measurement duration) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM3.5 | Incapable Indication | 9.4.2.20 (Measurement Report element) | CFRM:M | Yes ☐ No ☐ N/A ☐ |

## B.4.15 Radio management extensions *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| RM3.6 | Refused Indication | 9.4.2.20 (Measurement Report element), 11.10.5 (Station responsibility for conducting measurements) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM3.7 | Repeated Measurement | 9.6.6.2 (Radio Measurement Request frame format), 11.10.7 (Repeated Measurement Request frames) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM3.8 | Measurement Pause | 9.4.2.19.12 (Measurement Pause request), 11.10.9.7 (Measurement pause) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM4 | Beacon Measurement Type | 11.10 (Radio measurement procedures), 11.10.9.1 (Beacon report) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM4.1 | Beacon request | 9.4.2.19.7 (Beacon request) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM4.2 | Passive Measurement mode | 9.4.2.19.7 (Beacon request), 11.10.9.1 (Beacon report) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM4.3 | Active Measurement mode | 9.4.2.19.7 (Beacon request), 11.10.9.1 (Beacon report) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM4.4 | Beacon table mode | 9.4.2.19.7 (Beacon request), 11.10.9.1 (Beacon report) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM4.5 | Reporting Conditions | 9.4.2.19.7 (Beacon request) | CFRM:O | Yes ☐ No ☐ N/A ☐ |
| RM4.6 | Beacon report | 9.4.2.19.7 (Beacon request) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM4.7 | Reporting Detail | 9.4.2.19.7 (Beacon request), 9.4.2.20.7 (Beacon report), 9.4.2.34 (AP Channel Report element) | CFRM:O | Yes ☐ No ☐ N/A ☐ |
| * RM5 | Frame Measurement Type | 11.10 (Radio measurement procedures), 11.10.9.2 (Frame report) | CFRM:O | Yes ☐ No ☐ N/A ☐ |
| RM5.1 | Frame request | 9.4.2.19.8 (Frame request) | (CFRM AND RM5):M | Yes ☐ No ☐ N/A ☐ |

## B.4.15 Radio management extensions *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| RM5.2 | Frame report | 9.4.2.20.8 (Frame report) | (CFRM AND RM5):M | Yes ☐ No ☐ N/A ☐ |
| RM6 | Channel Load Measurement Type | 11.10 (Radio measurement procedures), 11.10.9.3 (Channel load report) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM6.1 | Channel Load request | 9.4.2.19.5 (Channel Load request) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM6.2 | Channel Load report | 9.4.2.20.5 (Channel Load report) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM7 | Noise Histogram Measurement Type | 11.10 (Radio measurement procedures), 11.10.9.4 (Noise Histogram report) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM7.1 | Noise Histogram request | 9.4.2.19.6 (Noise Histogram request) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM7.2 | Noise Histogram report | 9.4.2.20.6 (Noise Histogram report) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM8 | STA Statistics Measurement Type | 11.10 (Radio measurement procedures), 11.10.9.5 (STA Statistics report) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM8.1 | STA Statistics request | 9.4.2.19.9 (STA Statistics request) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM8.2 | STA Statistics report | 9.4.2.20.9 (STA Statistics report) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM9 | LCI Measurement Type | 11.10 (Radio measurement procedures), 11.10.9.6 (LCI report (Location configuration information report)) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM9.1 | LCI request | 9.4.2.19.10 (LCI request (Location configuration information request)) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM9.1.1 | Location Subject | 9.4.2.19.10 (LCI request (Location configuration information request)) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM9.1.1.1 | Location Subject third party | 9.4.2.19.10 (LCI request (Location configuration information request)) | CFRM:O | Yes ☐ No ☐ N/A ☐ |

## B.4.15 Radio management extensions *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| RM11.2 | Receive and process AP Channel report | 9.3.3.2 (Beacon frame format), 9.3.3.10 (Probe Response frame format), 9.4.2.34 (AP Channel Report element) | (CFRM AND CFSTAofAP):M | Yes ☐ No ☐ N/A ☐ |
| RM12 | Neighbor report procedure | 11.10 (Radio measurement procedures), 11.10.10 (Usage of the neighbor report) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM12.1 | Neighbor report procedure | 11.10.10.2 (Requesting a neighbor report), 11.10.10.3 (Responding to a neighbor report request) | CFRM:M | Yes ☐ No ☐ N/A ☐ |
| RM12.2 | TSF Offset in neighbor report | 9.4.2.35 (Neighbor Report element), 11.10.10.3 (Responding to a neighbor report request) | CFRM:O | Yes ☐ No ☐ N/A ☐ |
| RM13 | RCPI Measurement | | | |
| RM13.1 | RCPI Measurement for DSSS PHY at 2.4 GHz | 15.4.6.6 (Received channel power indicator (RCPI) measurement) | (CFRM AND CFDSSS):M | Yes ☐ No ☐ N/A ☐ |
| RM13.2 | RCPI Measurement for OFDM PHY at 5 GHz | (#1369)17.2.3 (RXVECTOR parameters(#1369)), 17.3.10.7 (Received channel power indicator (RCPI) measurement) | (CFRM AND CFOFDM): M | Yes ☐ No ☐ N/A ☐ |
| RM13.3 | RCPI Measurement for HR DSSS PHY at 2.4 GHz | 16.3.8.6 (Received channel power indicator (RCPI) measurement) | (CFRM AND CFHRDSSS):M | Yes ☐ No ☐ N/A ☐ |
| RM13.4 | RCPI Measurement for Extended Rate PHY at 2.4 GHz | 8.3.5.15 (PHY-RXEND.indication) | (CFRM AND CFERP):M | Yes ☐ No ☐ N/A ☐ |
| RM14 | RCPI Measurement during Active Scanning | | | |
| RM14.1 | Respond with RCPI element when requested | 11.1.4.3.2 (Active scanning procedure for a non-DMG STA) | (CFRM AND (CFQoS OR CFDMG) AND CFAP):M | Yes ☐ No ☐ N/A ☐ |

## B.4.16 DSE functions *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| DSE9.12 | Reception of New Country element in Extended Channel Announcement frame and reception of New Country subelement in Channel Switch Wrapper element in Beacon/Probe Response frames, and associated extended channel switching procedure by a STA. | 11.38.4 (Channel switching methods for a VHT BSS) | CFESM:M | Yes ☐ No ☐ N/A ☐ |
| DSE10 | DSE power constraint procedure Transmission of DSE power constraint announcement by an enabling STA<br><br>Reception of DSE power constraint announcement by a dependent STA | 11.11.5 (Dependent STA operation with DSE)<br><br>11.11.5 (Dependent STA operation with DSE) | (CF3G6 AND CFAP):M<br><br>CF3G6:M | Yes ☐ No ☐ N/A ☐<br><br>Yes ☐ No ☐ N/A ☐ |

## B.4.17 High Throughput (HT) features(#2297)

### B.4.17.1 HT MAC features

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| | Are the following MAC protocol features supported? | | | |
| HTM1 | HT capabilities signaling | | | |
| HTM1.1 | HT Capabilities element | 9.4.2.54.1 (HT Capabilities element structure) | CFHT:M CFTVHT:M | Yes ☐ No ☐ N/A ☐ |
| HTM1.2 | Signaling of STA capabilities in Probe Request, (Re)Association Request frames | 9.3.3.5 (Association Request frame format), 9.3.3.7 (Reassociation Request frame format), 9.3.3.9 (Probe Request frame format), 9.4.2.54 (HT Capabilities element) | (CFHT AND CFIndepSTA): M (CFTVHT AND CFIndepSTA): M | Yes ☐ No ☐ N/A ☐ |

### B.4.17.1 HT MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| HTM1.3 | Signaling of STA and BSS capabilities in Beacon, Probe Response, (Re)Association Response frames | 9.3.3.2 (Beacon frame format), 9.3.3.6 (Association Response frame format), 9.3.3.8 (Reassociation Response frame format), 9.3.3.10 (Probe Response frame format), 9.4.2.54 (HT Capabilities element) | (CFHT AND CFAP):M (CFTVHT AND CFAP):M | Yes ☐ No ☐ N/A ☐ |
| HTM2 | Signaling of HT operation | 9.4.2.55 (HT Operation element) | (CFHT AND CFAP):M (CFTVHT AND CFAP):M | Yes ☐ No ☐ N/A ☐ |
| HTM3 | MPDU aggregation | | | |
| HTM3.1 | Reception of A-MPDU | 9.4.2.54.3 (A-MPDU Parameters field), 10.12.2 (A-MPDU length limit rules), 12.5 (RSNA confidentiality and integrity protocols) | (CFHT AND NOT CFS1G):M CFS1G: O | Yes ☐ No ☐ N/A ☐ |
| HTM3.2 | A-MPDU format | 9.7.1 (A-MPDU format) | (CFHT OR CFS1G):M | Yes ☐ No ☐ N/A ☐ |
| HTM3.3 | A-MPDU contents | 9.7.3 (A-MPDU contents) | (CFHT OR CFS1G):M | Yes ☐ No ☐ N/A ☐ |
| HTM3.4 | A-MPDU frame exchange sequences | 10.23.2.8 (Multiple frame exchange sequences in an EDCA TXOP(#109)) | (CFHT AND NOT CFS1G):M CFS1G: O | Yes ☐ No ☐ N/A ☐ |
| HTM3.5 | Transmission of A-MPDU | 9.4.2.54.3 (A-MPDU Parameters field), 12.5 (RSNA confidentiality and integrity protocols) | CFHT:O CFVHT:M CFS1G: O | Yes ☐ No ☐ N/A ☐ |
| HTM4 | MSDU aggregation | | | |

### B.4.17.1 HT MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| (M118)*HTM 4.4 | Transmission of A-MSDUs | 9.2.4.5 (QoS Control field), 9.3.2.2 (Aggregate MSDU (A-MSDU) format) | CFHT:O CFS1G:O | Yes ☐ No ☐ N/A ☐ |
| HTM5 | Block Ack | | | |
| HTM5.1 | Block ack mechanism | 9.3.1.7 (BlockAckReq frame format), 9.3.1.8 (BlockAck frame format), 9.4.1.13 (Block Ack Parameter Set field), 10.25 (Block acknowledgment (block ack)), 11.15 (20/40 MHz BSS operation) | CFHT:M CFTVHT:M | Yes ☐ No ☐ N/A ☐ |
| HTM5.2 | Use of compressed bitmap between HT STAs | 9.3.1.8.2 (Compressed BlockAck variant), 10.25.5 (Selection of BlockAck and BlockAckReq variants) | CFHT:M CFTVHT:M | Yes ☐ No ☐ N/A ☐ |
| HTM5.3 | HT-immediate block ack extensions | 10.25.6 (HT-immediate block ack extensions) | (CFHT AND NOT CFS1G):M CFVHT:M CFS1G:O (CFS1G AND (S1GM20.2 OR S1GM20.3 OR S1GM20.5)): M | Yes ☐ No ☐ N/A ☐ |
| HTM5.4 | *Reserved* | | | |
| HTM5.5 | *Reserved(#3263)* | | | Yes ☐ No ☐ N/A ☐ |
| HTM6 | Protection mechanisms for different HT PHY options | | | |
| HTM6.1 | Protection of RIFS PPDUs in the presence of non-HT STAs | 10.27.3.3 (RIFS protection) | CFHT:M | Yes ☐ No ☐ N/A ☐ |
| HTM6.2 | Protection of RIFS PPDUs in an IBSS | 10.27.3.3 (RIFS protection) | CFHT:M | Yes ☐ No ☐ N/A ☐ |
| HTM6.3 | Protection of (#1367)(#2095)HT-greenfield format PPDUs in the presence of non-HT STAs | 10.27.3.1 (General) | HTP1.3:M | Yes ☐ No ☐ N/A ☐ |
| HTM6.4 | Protection of (#1367)(#2095)HT-greenfield format PPDUs in an IBSS | 10.27.3.1 (General) | CFHT:M | Yes ☐ No ☐ N/A ☐ |

### B.4.17.1 HT MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| HTM7 | Duration/ID rules for A-MPDU | 9.7.3 (A-MPDU contents) | CFHT:M | Yes ☐ No ☐ N/A ☐ |
| HTM8 | Truncation of TXOP as TXOP holder | 10.23.2.10 (Truncation of TXOP) | CFHT:O CFTVHT:O | Yes ☐ No ☐ N/A ☐ |
| HTM9 | Reception of +HTC frames | 9.2.4.1.10 (+HTC subfield), 9.4.2.54.5 (HT Extended Capabilities field), 10.8 (HT Control field operation) | CFHT:O CFTVHT:O | Yes ☐ No ☐ N/A ☐ |
| (M118)HTM10 | Reverse direction (RD) aggregation exchanges | 10.29 (Reverse direction protocol) | CFHT:O CFTVHT:O | Yes ☐ No ☐ N/A ☐ |
| HTM10.1 | Constraints regarding responses | 10.29.4 (Rules for RD responder) | HTM11:M | Yes ☐ No ☐ N/A ☐ |
| (M118)*HTM11 | Link adaptation | | | |
| HTM11.1 | Use of the HT Control field for link adaptation in immediate response exchange | 9.2.4.6 (HT Control field), 9.3.3.14 (Action No Ack frame format), 10.31.2 (Link adaptation using the HT variant HT Control field) | CFHT:O CFTVHT:O | Yes ☐ No ☐ N/A ☐ |
| HTM11.2 | Link adaptation using explicit feedback mechanism | 9.3.3.14 (Action No Ack frame format), 10.33.3 (Explicit feedback beamforming) | CFHT:O CFTVHT:O | Yes ☐ No ☐ N/A ☐ |
| HTM12 | Transmit beamforming | | | |
| *HTM12.1 | Transmission of beamformed PPDUs | 10.33 (Transmit beamforming) | CFHT:O | Yes ☐ No ☐ N/A ☐ |
| *HTM12.2 | Reception of beamformed PPDUs | 10.33 (Transmit beamforming) | CFHT:O | Yes ☐ No ☐ N/A ☐ |
| *HTM12.3 | Initiate transmit beamforming frame exchange sequence(#109) with implicit feedback | 10.33.2 (HT transmit beamforming with implicit feedback) | (M118)HTM12.1:O | Yes ☐ No ☐ N/A ☐ |
| HTM12.3.1 | Reception of sounding PPDUs | 10.33.2 (HT transmit beamforming with implicit feedback) | (M118)HTM12.3:M | Yes ☐ No ☐ N/A ☐ |

### B.4.17.1 HT MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| *HTM12.4 | Response to transmit beamforming frame exchange sequence(#109) with implicit feedback | 10.33.2 (HT transmit beamforming with implicit feedback) | (M118)HTM12.2:O | Yes ☐ No ☐ N/A ☐ |
| HTM12.4.1 | Transmission of sounding PPDUs | 10.33.2 (HT transmit beamforming with implicit feedback) | (M118)HTM12.4:M | Yes ☐ No ☐ N/A ☐ |
| *HTM12.5 | Initiate transmit beamforming frame exchange sequence(#109) with explicit feedback | 9.6.11.4 (CSI frame format), 10.33.3 (Explicit feedback beamforming) | (M118)HTM12.1:O | Yes ☐ No ☐ N/A ☐ |
| HTM12.5.1 | Transmission of sounding PPDUs | 10.33.3 (Explicit feedback beamforming) | (M118)HTM12.5:M | Yes ☐ No ☐ N/A ☐ |
| *HTM12.6 | Respond to transmit beamforming frame exchange sequence(#109) with explicit feedback | 10.33.3 (Explicit feedback beamforming) | (M118)HTM12.2:O | Yes ☐ No ☐ N/A ☐ |
| HTM12.6.1 | Transmission of Action No Ack +HTC frame including Action payload of type CSI | 9.6.11.4 (CSI frame format), 10.33.3 (Explicit feedback beamforming) | (M118)HTM12.6:O.1 | Yes ☐ No ☐ N/A ☐ |
| HTM12.6.2 | Transmission of Action No Ack +HTC frame including Action payload of type “Noncompressed beamforming” | 9.6.11.5 (Noncompressed Beamforming frame format), 10.33.3 (Explicit feedback beamforming) | (M118)HTM12.6:O.1 | Yes ☐ No ☐ N/A ☐ |
| HTM12.6.3 | Transmission of Action No Ack +HTC frame including Action payload of type “Compressed beamforming” | 9.6.11.6 (Compressed Beamforming frame format), 10.33.3 (Explicit feedback beamforming) | (M118)HTM12.6:O.1 | Yes ☐ No ☐ N/A ☐ |
| *HTM12.7 | Calibration procedure | 9.3.3.14 (Action No Ack frame format), 10.33.2.4 (Calibration) | (M118)HTM12:O | Yes ☐ No ☐ N/A ☐ |

### B.4.17.1 HT MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| HTM13 | Antenna selection (ASEL) | 9.2.4.6 (HT Control field), 9.4.2.54.7 (ASEL Capability field), 9.6.11.7 (Antenna Selection Indices Feedback frame format), 10.34 (Antenna selection (ASEL)) | CFHT:O | Yes ☐ No ☐ N/A ☐ |
| *HTM14 | Null data PPDU (NDP) | 10.35 (Null data PPDU (NDP) sounding) | CFHT:O | Yes ☐ No ☐ N/A ☐ |
| (M118)*HTM15 | Space-time block coding (STBC) support | | | |
| HTM15.1 | STBC beacon transmission<br><br>The use of the STBC beacon transmission mechanism is deprecated. | 11.1.3.2 (Beacon generation in non-DMG infrastructure networks) | HTP2.11:O | Yes ☐ No ☐ N/A ☐ |
| HTM15.2 | Dual CTS protection<br><br>The use of the dual CTS mechanism is obsolete. | 10.3.2.10 (Dual CTS protection) | HTP2.11 AND NOT CFS1G: O | Yes ☐ No ☐ N/A ☐ |
| HTM16 | SM power save support | | | |
| *HTM16.1 | AP support for non-AP STA dynamic and static SM power save mode | 11.2.6 (SM power save) | (CFHT AND CFAP):M (CFTVHT AND CFAP):M | Yes ☐ No ☐ N/A ☐ |
| *HTM16.2 | STA support for local dynamic and static SM power save mode | 11.2.6 (SM power save) | (CFHT AND CFIndepSTA):O (CFTVHT AND CFIndepSTA):O | Yes ☐ No ☐ N/A ☐ |
| HTM16.3 | Transmit SM power save state information using HT Capabilities element, or SM Power Save frame | 9.6.11.3 (SM Power Save frame format), 11.2.6 (SM power save) | (M118)HTM16.2:M | Yes ☐ No ☐ N/A ☐ |
| HTM16.4 | Receive SM power save state information and support frame exchanges with STAs in SM power save mode | 11.2.6 (SM power save) | (M118)HTM16.1:M | Yes ☐ No ☐ N/A ☐ |
| HTM17 | Mechanisms for coexistence of 20 MHz and 40 MHz channels | 11.15 (20/40 MHz BSS operation) | CFHT:M | Yes ☐ No ☐ N/A ☐ |

### B.4.17.1 HT MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| HTM18 | Channel selection methods for 20/40 MHz operation | 11.15.3 (Channel scanning and selection methods for 20/ 40 MHz operation) | (HTP2.3.4 AND CFAP):M | Yes ☐ No ☐ N/A ☐ |
| HTM19 | 20/40 MHz operation | 11.15 (20/40 MHz BSS operation) | HTP2.3.4:M | Yes ☐ No ☐ N/A ☐ |
| HTM20 | Management information base (MIB) | | | |
| HTM20.1 | dot11PhyHTComplianceGroup | Annex C | CFHT:M | Yes ☐ No ☐ N/A ☐ |
| HTM20.2 | dot11PhyMCSGroup | Annex C | CFHT:M | Yes ☐ No ☐ N/A ☐ |

### B.4.17.2 HT PHY features

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| | Are the following PHY protocol features supported? | | | |
| HTP1 | PHY operating modes | | | |
| HTP1.1 | Operation according to Clause 17 (Orthogonal frequency division multiplexing (OFDM) PHY specification) (OFDM) and/or Clause 18 (Extended Rate PHY (ERP) specification) (ERP) | 19.1.4 (PPDU formats) | CFHT:M | Yes ☐ No ☐ N/A ☐ |
| HTP1.2 | HT-mixed format | 19.1.4 (PPDU formats) | CFHT:M | Yes ☐ No ☐ N/A ☐ |
| *HTP1.3 | (#1367)HT-greenfield format | 19.1.4 (PPDU formats) | CFHT:O | Yes ☐ No ☐ N/A ☐ |
| HTP2 | PHY frame format | | | |
| HTP2.1 | (#2095)HT-mixed format PPDU | 19.3.2 (PPDU format) | CFHT:M | Yes ☐ No ☐ N/A ☐ |
| HTP2.2 | (#2095)HT-greenfield format PPDU | 19.3.2 (PPDU format) | HTP1.3:M | Yes ☐ No ☐ N/A ☐ |

### B.4.17.2 HT PHY features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| HTP2.3 | Modulation and coding schemes (MCS) | | | |
| HTP2.3.1 | MCS 0 to MCS 7 in 20 MHz with 800 ns guard interval (GI) | | | |
| HTP2.3.1.1 | Support for 20 MHz with 800 ns GI MCS index 0 | 19.3.5 (Modulation and coding scheme (MCS)), 19.5 (Parameters for HT-MCSs) | CFHT:M | Yes ☐ No ☐ N/A ☐ |
| HTP2.3.1.2 | Support for 20 MHz with 800 ns GI MCS index 1 | 19.3.5 (Modulation and coding scheme (MCS)), 19.5 (Parameters for HT-MCSs) | CFHT:M | Yes ☐ No ☐ N/A ☐ |
| HTP2.3.1.3 | Support for 20 MHz with 800 ns GI MCS index 2 | 19.3.5 (Modulation and coding scheme (MCS)), 19.5 (Parameters for HT-MCSs) | CFHT:M | Yes ☐ No ☐ N/A ☐ |
| HTP2.3.1.4 | Support for 20 MHz with 800 ns GI MCS index 3 | 19.3.5 (Modulation and coding scheme (MCS)), 19.5 (Parameters for HT-MCSs) | CFHT:M | Yes ☐ No ☐ N/A ☐ |
| HTP2.3.1.5 | Support for 20 MHz with 800 ns GI MCS index 4 | 19.3.5 (Modulation and coding scheme (MCS)), 19.5 (Parameters for HT-MCSs) | CFHT:M | Yes ☐ No ☐ N/A ☐ |
| HTP2.3.1.6 | Support for 20 MHz with 800 ns GI MCS index 5 | 19.3.5 (Modulation and coding scheme (MCS)), 19.5 (Parameters for HT-MCSs) | CFHT:M | Yes ☐ No ☐ N/A ☐ |
| HTP2.3.1.7 | Support for 20 MHz with 800 ns GI MCS index 6 | 19.3.5 (Modulation and coding scheme (MCS)), 19.5 (Parameters for HT-MCSs) | CFHT:M | Yes ☐ No ☐ N/A ☐ |

### B.4.17.2 HT PHY features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| HTP2.3.1.8 | Support for 20 MHz with 800 ns GI MCS index 7 | 19.3.5 (Modulation and coding scheme (MCS)), 19.5 (Parameters for HT-MCSs) | CFHT:M | Yes ☐ No ☐ N/A ☐ |
| HTP2.3.2 | MCS 8 to MCS 15 in 20 MHz with 800 ns GI | | | |
| HTP2.3.2.1 | Support for 20 MHz with 800 ns GI MCS index 8 | 19.3.5 (Modulation and coding scheme (MCS)), 19.5 (Parameters for HT-MCSs) | (CFHT AND CFAP AND NOT CFVHT):M (CFVHT AND CFAP):O (CFHT AND NOT CFAP):O | Yes ☐ No ☐ N/A ☐ |
| HTP2.3.2.2 | Support for 20 MHz with 800 ns GI MCS index 9 | 19.3.5 (Modulation and coding scheme (MCS)), 19.5 (Parameters for HT-MCSs) | (CFHT AND CFAP AND NOT CFVHT):M (CFVHT AND CFAP):O (CFHT AND NOT CFAP):O | Yes ☐ No ☐ N/A ☐ |
| HTP2.3.2.3 | Support for 20 MHz with 800 ns GI MCS index 10 | 19.3.5 (Modulation and coding scheme (MCS)), 19.5 (Parameters for HT-MCSs) | (CFHT AND CFAP AND NOT CFVHT):M (CFVHT AND CFAP):O (CFHT AND NOT CFAP):O | Yes ☐ No ☐ N/A ☐ |
| HTP2.3.2.4 | Support for 20 MHz with 800 ns GI MCS index 11 | 19.3.5 (Modulation and coding scheme (MCS)), 19.5 (Parameters for HT-MCSs) | (CFHT AND CFAP AND NOT CFVHT):M (CFVHT AND CFAP):O (CFHT AND NOT CFAP):O | Yes ☐ No ☐ N/A ☐ |
| HTP2.3.2.5 | Support for 20 MHz with 800 ns GI MCS index 12 | 19.3.5 (Modulation and coding scheme (MCS)), 19.5 (Parameters for HT-MCSs) | (CFHT AND CFAP AND NOT CFVHT):M (CFVHT AND CFAP):O (CFHT AND NOT CFAP):O | Yes ☐ No ☐ N/A ☐ |

### B.4.17.2 HT PHY features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| HTP2.3.2.6 | Support for 20 MHz with 800 ns GI MCS index 13 | 19.3.5 (Modulation and coding scheme (MCS)), 19.5 (Parameters for HT-MCSs) | (CFHT AND CFAP AND NOT CFVHT):M (CFVHT AND CFAP):O (CFHT AND NOT CFAP):O | Yes ☐ No ☐ N/A ☐ |
| HTP2.3.2.7 | Support for 20 MHz with 800 ns GI MCS index 14 | 19.3.5 (Modulation and coding scheme (MCS)), 19.5 (Parameters for HT-MCSs) | (CFHT AND CFAP AND NOT CFVHT):M (CFVHT AND CFAP):O (CFHT AND NOT CFAP):O | Yes ☐ No ☐ N/A ☐ |
| HTP2.3.2.8 | Support for 20 MHz with 800 ns GI MCS index 15 | 19.3.5 (Modulation and coding scheme (MCS)), 19.5 (Parameters for HT-MCSs) | (CFHT AND CFAP AND NOT CFVHT):M (CFVHT AND CFAP):O (CFHT AND NOT CFAP):O | Yes ☐ No ☐ N/A ☐ |
| HTP2.3.3 | Transmit and receive support for 400 ns GI | 19.3.5 (Modulation and coding scheme (MCS)), 19.5 (Parameters for HT-MCSs) | CFHT:O | Yes ☐ No ☐ N/A ☐ |
| *HTP2.3.4 | Operation at 40 MHz | 19.3.5 (Modulation and coding scheme (MCS)), 19.5 (Parameters for HT-MCSs) | CFHT:O | Yes ☐ No ☐ N/A ☐ |
| HTP2.3.5 | Support for MCS with indices 16 to 76 | | | |
| HTP2.3.5.1 | Support for MCS with index 16 | 19.3.5 (Modulation and coding scheme (MCS)), 19.5 (Parameters for HT-MCSs) | CFHT:O | Yes ☐ No ☐ N/A ☐ |
| HTP2.3.5.2 | Support for MCS with index 17 | 19.3.5 (Modulation and coding scheme (MCS)), 19.5 (Parameters for HT-MCSs) | CFHT:O | Yes ☐ No ☐ N/A ☐ |

## B.4.18 Tunneled direct link setup extensions(#1356)

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| TDLS 1.6 | TDLS Channel Switching | 9.4.2.60 (Link Identifier element), 9.4.2.62 (Channel Switch Timing element), 9.6.12.7 (TDLS Channel Switch Request Action field format), 9.6.12.8 (TDLS Channel Switch Response Action field format), 11.20.6 (TDLS channel switching) | CFIndepSTA AND CFMD AND CFOC AND CFTDLS:O | Yes ☐ No ☐ N/A ☐ |
| TDLS1.7 | TDLS Discovery | 9.4.2.60 (Link Identifier element), 9.6.7.17 (TDLS Discovery Response frame format), 9.6.12.12 (TDLS Discovery Request Action field format), 11.20.3 (TDLS discovery(#197)) | CFIndepSTA AND CFMD AND CFOC AND CFTDLS:O | Yes ☐ No ☐ N/A ☐ |

## B.4.19 WNM extensions

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| WNM1 | Extended Capabilities element | 9.4.2.25 (Extended Capabilities element) | CFWNM:M | Yes ☐ No ☐ N/A ☐ |
| WNM2 | STA Statistics (Triggered) and Multicast Diagnostics | 11.10.8 (Triggered autonomous reporting) | CFWNM:M | Yes ☐ No ☐ N/A ☐ |
| WNM2.1 | Protocol for Triggered Measurements | 11.10.8 (Triggered autonomous reporting) | CFWNM:M | Yes ☐ No ☐ N/A ☐ |

Copyright © 2024 IEEE. All rights reserved.

## B.4.20 Interworking (IW) with external networks extensions

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| | Are the following Interworking with External Networks capabilities supported? | | | |
| (M118)*IW1 | Interworking capabilities and information(#2164) | 9.4.2.90 (Interworking element), 11.22.2 (Interworking capabilities and information) | CFIW:M | Yes ☐ No ☐ N/A ☐ |
| IW1.1 | Interworking element | 9.4.2.90 (Interworking element) | IW1:M | Yes ☐ No ☐ N/A ☐ |
| IW1.2 | Access network type | 9.4.2.90 (Interworking element) | IW1:M | Yes ☐ No ☐ N/A ☐ |
| IW1.3 | Venue type | 9.4.2.90 (Interworking element) | IW1:M | Yes ☐ No ☐ N/A ☐ |
| IW1.4 | HESSID | 9.4.2.90 (Interworking element) | IW1:M | Yes ☐ No ☐ N/A ☐ |
| (M118)*IW2 | Generic Advertisement Service | 11.22.3 (Interworking procedures: generic advertisement service (GAS)) | CFIW:M | Yes ☐ No ☐ N/A ☐ |
| IW2.1 | Advertisement Protocol element | 9.4.2.91 (Advertisement Protocol element) | IW2:M | Yes ☐ No ☐ N/A ☐ |
| *IW2.2 | GAS Protocol | 11.22.3.2 (GAS Protocol) | IW2:M | Yes ☐ No ☐ N/A ☐ |
| *IW2.2.1 | GAS frames | 9.6.7 (Public Action frame details(#3729)) | IW2:M | Yes ☐ No ☐ N/A ☐ |
| (M118)*IW2.2.2 | Access network query protocol | 9.4.5 (Access network query protocol (ANQP)-elements(M118)) | IW2.2:M | Yes ☐ No ☐ N/A ☐ |
| IW2.2.3 | Query List | 9.4.5.2 (Query List ANQP-element) | IW2.2.1:M | Yes ☐ No ☐ N/A ☐ |
| IW2.2.4 | Capability List | 9.4.5.3 (Capability List ANQP-element) | IW2.2.1:M | Yes ☐ No ☐ N/A ☐ |

## B.4.20 Interworking (IW) with external networks extensions *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| IW2.2.5 | Venue Name | 9.4.5.4 (Venue Name ANQP-element) | IW2.2.1:O | Yes ☐ No ☐ N/A ☐ |
| IW2.2.6 | Emergency Call Number | 9.4.5.5 (Emergency Call Number ANQP-element) | IW2.2.1:O | Yes ☐ No ☐ N/A ☐ |
| IW2.2.7 | Network Authentication Type | 9.4.5.6 (Network Authentication Type ANQP-element) | IW2.2.1:O | Yes ☐ No ☐ N/A ☐ |
| IW2.2.8 | Roaming Consortium | 9.4.5.7 (Roaming Consortium ANQP-element) | IW2.2.1:O | Yes ☐ No ☐ N/A ☐ |
| IW2.2.9 | IP Address Type Availability | 9.4.5.9 (IP Address Type Availability ANQP-element) | IW2.2.1:O | Yes ☐ No ☐ N/A ☐ |
| IW2.2.10 | NAI Realm | 9.4.5.10 (NAI Realm ANQP-element) | IW2.2.1:O | Yes ☐ No ☐ N/A ☐ |
| IW2.2.11 | 3GPP Cellular Network | 9.4.5.11 (3GPP Cellular Network ANQP-element) | IW2.2.1:O | Yes ☐ No ☐ N/A ☐ |
| IW2.2.12 | AP Geospatial Location | 9.4.5.12 (AP Geospatial Location ANQP-element) | IW2.2.1:O | Yes ☐ No ☐ N/A ☐ |
| IW2.2.13 | AP Civic Location | 9.4.5.13 (AP Civic Location ANQP-element) | IW2.2.1:O | Yes ☐ No ☐ N/A ☐ |
| IW2.2.14 | AP Location Public Identifier URI/ FQDN | 9.4.5.14 (AP Location Public Identifier URI/ FQDN ANQP-element) | IW2.2.1:O | Yes ☐ No ☐ N/A ☐ |
| IW2.2.15 | Domain Name | 9.4.5.15 (Domain Name ANQP-element) | IW2.2.1:O | Yes ☐ No ☐ N/A ☐ |
| IW2.2.16 | Emergency Alert URI | 9.4.5.16 (Emergency Alert URI ANQP-element) | IW2.2.1:O | Yes ☐ No ☐ N/A ☐ |

## B.4.21 Mesh protocol capabilities

### B.4.21.1 General mesh support

| Item | Protocol capability | Reference | Status | Support |
|---|---|---|---|---|
| *MP1 | Support of mesh capability | 4.3.24 (Mesh BSS), 14.1 (General) | CFMBSS: M | Yes ☐ No ☐ N/A ☐ |
| MP1.1 | Mesh BSS scanning | 14.3.2 (Mesh identifier), 14.3.6 (Scanning mesh BSSs) | MP1:M | Yes ☐ No ☐ N/A ☐ |
| MP1.2 | Candidate peer mesh STA determination | 14.3.7 (Candidate peer mesh STA) | MP1:M | Yes ☐ No ☐ N/A ☐ |
| MP1.3 | Active mesh profile determination | 14.3.3 (Mesh profile), 14.3.4 (Mesh STA configuration) | MP1:M | Yes ☐ No ☐ N/A ☐ |
| MP1.4 | Establishing a mesh BSS | 14.3.8 (Establishing or becoming a member of a mesh BSS) | MP1:M | Yes ☐ No ☐ N/A ☐ |
| MP1.5 | Becoming a member of a mesh BSS | 14.3.8 (Establishing or becoming a member of a mesh BSS) | MP1:M | Yes ☐ No ☐ N/A ☐ |
| MP1.6 | Announcement of mesh profile and supplemental information for the mesh discovery | 14.3.3 (Mesh profile), 14.3.5 (Supplemental information for the mesh discovery) | MP1:M | Yes ☐ No ☐ N/A ☐ |
| *MP2 | Mesh peering management (MPM) framework | 14.4 (Mesh peering management (MPM)) | CFMBSS: M | Yes ☐ No ☐ N/A ☐ |
| *MP2.1 | Mesh peering management (MPM) protocol | 14.4 (Mesh peering management (MPM)) | MP2:M | Yes ☐ No ☐ N/A ☐ |
| MP2.1.1 | Processing of Mesh Peering Open frame | 14.4.6 (Mesh peering open) | MP2.1:M | Yes ☐ No ☐ N/A ☐ |
| MP2.1.2 | Processing of Mesh Peering Confirm frame | 14.4.7 (Mesh peering confirm) | MP2.1:M | Yes ☐ No ☐ N/A ☐ |
| MP2.1.3 | Processing of Mesh Peering Close frame | 14.4.8 (Mesh peering close) | MP2.1:M | Yes ☐ No ☐ N/A ☐ |
| MP2.1.4 | MPM finite state machine | 14.5 (Mesh peering management finite state machine (MPM FSM)) | MP2.1:M | Yes ☐ No ☐ N/A ☐ |
| *MP2.2 | Authenticated mesh peering exchange (AMPE) | 14.6 (Authenticated mesh peering exchange (AMPE)) | MP2:O | Yes ☐ No ☐ N/A ☐ |
| MP2.2.1 | Mesh authentication using SAE | 12.4 (Authentication using a password), 14.4.3 (Mesh authentication) | MP2.2:M | Yes ☐ No ☐ N/A ☐ |
| MP2.2.2 | Mesh authentication using IEEE Std 802.1X | 4.10 (IEEE Std 802.11 and IEEE Std 802.1X-2020(#3469)), 14.4.3 (Mesh authentication) | MP2.2:O | Yes ☐ No ☐ N/A ☐ |

### B.4.21.1 General mesh support *(continued)*

| Item | Protocol capability | Reference | Status | Support |
|---|---|---|---|---|
| MP2.2.3 | Protected mesh peering management frame processing(M118) | 14.6.3 (Construction and processing AES-SIV-protected mesh peering Management frames), 14.6.3 (Construction and processing AES-SIV-protected mesh peering Management frames) | MP2.2:M | Yes ☐ No ☐ N/A ☐ |
| MP2.2.4 | Mesh pairwise master key security association (PMKSA) caching | 12.6.10 (RSNA authentication in an MBSS) | MP2.2:M | Yes ☐ No ☐ N/A ☐ |
| MP2.2.5 | AMPE finite state machine | 14.6.6 (AMPE finite state machine) | MP2.2:M | Yes ☐ No ☐ N/A ☐ |
| MP2.2.6 | MGTK distribution | 14.6.4 (Distribution of group keys in an MBSS(#1521)) | MP2.2:M | Yes ☐ No ☐ N/A ☐ |
| MP2.2.7 | MGTK update | 14.7 (Mesh group key handshake) | MP2.2:O | Yes ☐ No ☐ N/A ☐ |
| MP3 | Mesh STA beaconing | 14.14.3 (Beaconing) | CFMBSS:M | Yes ☐ No ☐ N/A ☐ |
| *MP4 | Mesh STA synchronization | 14.14.2 (Extensible synchronization framework) | CFMBSS:M | Yes ☐ No ☐ N/A ☐ |
| *MP4.1 | Neighbor offset synchronization method | 14.14.2 (Extensible synchronization framework) | MP4:M | Yes ☐ No ☐ N/A ☐ |
| MP4.1.1 | Calculation of TSF offset | 14.14.2.2.2 (Timing offset calculation) | MP4.1:M | Yes ☐ No ☐ N/A ☐ |
| MP4.1.2 | Clock drift adjustment | 14.14.2.2.3 (Clock drift adjustment) | MP4.1:M | Yes ☐ No ☐ N/A ☐ |
| *MP4.2 | Mesh beacon collision avoidance (MBCA) | 14.14.4 (Mesh beacon collision avoidance (MBCA)) | MP4:O | Yes ☐ No ☐ N/A ☐ |
| MP4.2.1 | Beacon timing advertisement | 14.14.4.2 (Beacon timing advertisement) | MP4.2:M | Yes ☐ No ☐ N/A ☐ |
| MP4.2.2 | TBTT selection | 14.14.4.3 (TBTT selection) | MP4.2:M | Yes ☐ No ☐ N/A ☐ |
| MP4.2.3 | TBTT adjustment | 14.14.4.4 (TBTT adjustment) | MP4.2:M | Yes ☐ No ☐ N/A ☐ |
| MP4.2.4 | Frame transmission across reported TBTT | 14.14.4.5 (Frame transmission across reported TBTT) | MP4.2:O | Yes ☐ No ☐ N/A ☐ |
| MP4.2.5 | Delayed beacon transmission | 14.14.4.6 (Delayed beacon transmissions) | MP4.2:O | Yes ☐ No ☐ N/A ☐ |
| *MP5 | MCCA | 10.24.3 (MCF controlled channel access (MCCA)) | CFMBSS:O | Yes ☐ No ☐ N/A ☐ |
| MP5.1 | (M118)MCCAOP advertisement | 10.24.3.7 (MCCAOP advertisement) | MP5:M | Yes ☐ No ☐ N/A ☐ |

| Item | Protocol capability | Reference | Status | Support |
|---|---|---|---|---|
| MP5.2 | (M118)Neighbor MCCAOP recognition | 10.24.3.4 (Neighborhood MCCAOP periods at a mesh STA), 10.24.3.5 (MCCA access fraction (MAF)) | MP5:M | Yes ☐ No ☐ N/A ☐ |
| MP5.3 | (M118)MCCAOP setup | 10.24.3.6 (MCCAOP setup procedure) | MP5:M | Yes ☐ No ☐ N/A ☐ |
| MP5.4 | Access during MCCAOPs | 10.24.3.9 (Access during MCCAOPs) | MP5:M | Yes ☐ No ☐ N/A ☐ |
| MP5.5 | MCCAOP teardown | 10.24.3.8 (MCCAOP teardown) | MP5:M | Yes ☐ No ☐ N/A ☐ |
| *MP6 | Intra mesh congestion control | 14.13 (Intra-mesh congestion control) | CFMBSS: O | Yes ☐ No ☐ N/A ☐ |
| MP6.1 | Local congestion monitoring and detection | 14.13 (Intra-mesh congestion control) | MP6:M | Yes ☐ No ☐ N/A ☐ |
| MP6.2 | Congestion control signaling | 14.13 (Intra-mesh congestion control) | MP6:M | Yes ☐ No ☐ N/A ☐ |
| MP6.3 | Local rate control | 14.13 (Intra-mesh congestion control) | MP6:M | Yes ☐ No ☐ N/A ☐ |
| *MP7 | MBSS channel switching procedure | 11.8.8 (Selecting and advertising a new channel), 11.9.3 (Selecting and advertising a new channel and/or operating class) | CFMBSS: M | Yes ☐ No ☐ N/A ☐ |
| MP7.1 | Transmission of channel switch advertisement | 11.8.8 (Selecting and advertising a new channel), 11.9.3 (Selecting and advertising a new channel and/or operating class) | MP7:M | Yes ☐ No ☐ N/A ☐ |
| MP7.2 | Propagation of channel switch advertisement | 11.8.8 (Selecting and advertising a new channel), 11.9.3 (Selecting and advertising a new channel and/or operating class) | MP7:M | Yes ☐ No ☐ N/A ☐ |
| *MP8 | Mesh power save operation (operation in light or deep sleep mode) | 14.15 (Power save in a mesh BSS) | CFMBSS: O | Yes ☐ No ☐ N/A ☐ |
| MP8.1 | Link-specific mesh power management mode setting | 14.15.2.2 (Peer-specific mesh power management modes), 14.15.8 (Operation in peer-specific and nonpeer mesh power management modes) | MP8:M | Yes ☐ No ☐ N/A ☐ |

### B.4.21.1 General mesh support *(continued)*

| Item | Protocol capability | Reference | Status | Support |
|---|---|---|---|---|
| MP8.2 | Nonpeer mesh power management mode setting | 14.15.2.3 (Nonpeer mesh power management modes) | MP8:M | Yes ☐ No ☐ N/A ☐ |
| MP8.3 | Light sleep mode operation | 14.15.8.4 (Operation in light sleep mode for a mesh peering) | MP8:M | Yes ☐ No ☐ N/A ☐ |
| MP8.4 | Deep sleep mode operation | 14.15.8.5 (Operation in deep sleep mode for a mesh peering) | MP8:M | Yes ☐ No ☐ N/A ☐ |
| MP8.5 | STA power state transitions | 14.15.3 (Mesh power management mode indications and transitions) | MP8:M | Yes ☐ No ☐ N/A ☐ |
| MP8.6 | Mesh awake window operation | 14.15.6 (Mesh awake window) | MP8:M | Yes ☐ No ☐ N/A ☐ |
| *MP9 | Mesh power save support | 14.15 (Power save in a mesh BSS) | CFMBSS: M | Yes ☐ No ☐ N/A ☐ |
| MP9.1 | TIM transmission | 14.15.4 (TIM transmissions in an MBSS) | MP9:M | Yes ☐ No ☐ N/A ☐ |
| MP9.2 | Link-specific mesh power management modes determination | 14.15.2 (Mesh power management modes) | MP9:M | Yes ☐ No ☐ N/A ☐ |
| MP9.3 | Group addressed frame transmission | 14.15.7 (Power save support) | MP9:M | Yes ☐ No ☐ N/A ☐ |
| MP9.4 | Frame transmission to a mesh STA in light sleep mode | 14.15.7 (Power save support), 14.15.9 (Mesh peer service periods) | MP9:M | Yes ☐ No ☐ N/A ☐ |
| MP9.5 | Frame transmission to a mesh STA in deep sleep mode | 14.15.7 (Power save support), 14.15.9 (Mesh peer service periods) | MP9:M | Yes ☐ No ☐ N/A ☐ |
| *MP10 | Link metric computation | 14.10 (Path selection link metric) | CFMBSS: M | Yes ☐ No ☐ N/A ☐ |
| MP10.1 | Airtime link metric computation | (The extensibility framework allows the default link metric to be overridden by another path selection metric as specified in the mesh profile.) | MP10:M | Yes ☐ No ☐ N/A ☐ |
| MP10.2 | High PHY rate airtime link metric computation | 14.10.2 (Airtime link metric and high PHY rate airtime link metric) | MP10:O | Yes ☐ No ☐ N/A ☐ |
| *MP11 | Link metric reporting | 14.9.3 (Link metric reporting) | CFMBSS: M | Yes ☐ No ☐ N/A ☐ |
| MP11.1 | Autonomous link metric reporting | 14.9.3 (Link metric reporting) | MP11:O | Yes ☐ No ☐ N/A ☐ |

### B.4.21.1 General mesh support *(continued)*

| Item | Protocol capability | Reference | Status | Support |
|---|---|---|---|---|
| MP11.2 | Link metric reporting upon request | 14.9.3 (Link metric reporting) | MP11:M | Yes ☐ No ☐ N/A ☐ |
| *MP12 | Proxy operation | 14.12.4 (Proxy information and proxy update) | CFMBSS: O | Yes ☐ No ☐ N/A ☐ |
| MP12.1 | Data forwarding at proxy mesh gate | 14.12.3 (Data forwarding at proxy mesh gates) | MP12:M | Yes ☐ No ☐ N/A ☐ |
| MP12.2 | Maintenance of proxy information | 14.12.4.2 (Proxy information) | CFMBSS: M | Yes ☐ No ☐ N/A ☐ |
| MP12.3 | Proxy update using Proxy Update and Proxy Update Confirmation frames | 14.12.4 (Proxy information and proxy update) | CFMBSS: M | Yes ☐ No ☐ N/A ☐ |
| MP12.4 | Proxy update using HWMP Mesh Path Selection frames | 14.11.9 (Path request (PREQ) mechanism), 14.11.10 (Path reply (PREP) mechanism), 14.11.11 (Path error (PERR) mechanism) | HWM1:M | Yes ☐ No ☐ N/A ☐ |
| *MP13 | Gate announcement | 14.12.2 (Gate announcement (GANN)) | CFMBSS: O | Yes ☐ No ☐ N/A ☐ |
| MP13.1 | GANN transmission | 14.12.2 (Gate announcement (GANN)) | MP13:O | Yes ☐ No ☐ N/A ☐ |
| MP13.2 | GANN reception and propagation | 14.12.2 (Gate announcement (GANN)) | CFMBSS: M | Yes ☐ No ☐ N/A ☐ |
| *MP14 | Mesh Control field handling | 9.2.4.8.3 (Mesh Control field) | CFMBSS: M | Yes ☐ No ☐ N/A ☐ |
| MP14.1 | Address Extension recognition | 9.2.4.8.3 (Mesh Control field), 9.3.5 (Frame addressing in an MBSS) | MP14:M | Yes ☐ No ☐ N/A ☐ |
| MP14.2 | Mesh TTL handling | 9.2.4.8.3 (Mesh Control field), 10.37.3 (Addressing and forwarding of individually addressed mesh Data frames), 10.37.4 (Addressing and forwarding of group addressed mesh Data frames), 10.37.5 (Addressing of Management frames and MMPDU forwarding) | MP14:M | Yes ☐ No ☐ N/A ☐ |

### B.4.21.1 General mesh support *(continued)*

| Item | Protocol capability | Reference | Status | Support |
|---|---|---|---|---|
| MP14.3 | Mesh Sequence Number handling | 9.2.4.8.3 (Mesh Control field), 10.37.3 (Addressing and forwarding of individually addressed mesh Data frames), 10.37.4 (Addressing and forwarding of group addressed mesh Data frames), 10.37.5 (Addressing of Management frames and MMPDU forwarding), 10.37.6 (Detection of duplicate MSDUs/MMPDUs) | MP14:M | Yes ☐ No ☐ N/A ☐ |
| *MP15 | MSDU/MMPDU forwarding | 10.37 (Mesh forwarding framework) | CFMBSS: O | Yes ☐ No ☐ N/A ☐ |
| MP15.1 | Individually addressed MSDU forwarding | 10.37.3 (Addressing and forwarding of individually addressed mesh Data frames) | MP15:M | Yes ☐ No ☐ N/A ☐ |
| MP15.2 | Group addressed MSDU forwarding | 10.37.4 (Addressing and forwarding of group addressed mesh Data frames) | MP15:M | Yes ☐ No ☐ N/A ☐ |
| MP15.3 | MMPDU forwarding | 10.37.5 (Addressing of Management frames and MMPDU forwarding) | MP15:M | Yes ☐ No ☐ N/A ☐ |
| MP15.4 | Detection of duplicate MSDUs/ MMPDUs | 10.37.6 (Detection of duplicate MSDUs/ MMPDUs) | CFMBSS: M | Yes ☐ No ☐ N/A ☐ |
| MP15.5 | Treatment of unknown destination | 10.37.8 (MSDU forwarding and unknown destination) | CFMBSS: M | Yes ☐ No ☐ N/A ☐ |

### B.4.21.2 HWMP path selection protocol capabilities

| Item | Protocol capability | Reference | Status | Support |
|---|---|---|---|---|
| *HWM1 | Hybrid wireless mesh protocol (HWMP) | 14.11 (Hybrid wireless mesh protocol (HWMP)) | CFMBSS:M | Yes ☐ No ☐ N/A ☐ |
| *HWM1.1 | On-demand path selection | 14.11.3 (On-demand path selection mode) | HWM1:M | Yes ☐ No ☐ N/A ☐ |
| HWM1.1.1 | PREQ processing for on-demand path selection | 14.11.9 (Path request (PREQ) mechanism) | HWM1.1:M | Yes ☐ No ☐ N/A ☐ |

This is an unapproved IEEE Standards Draft, subject to change.

### B.4.21.2 HWMP path selection protocol capabilities *(continued)*

| Item | Protocol capability | Reference | Status | Support |
|---|---|---|---|---|
| HWM1.1.2 | PREP processing for on-demand path selection | 14.11.10 (Path reply (PREP) mechanism) | HWM1.1:M | Yes ☐ No ☐ N/A ☐ |
| HWM1.1.3 | PERR processing for on-demand path selection | 14.11.11 (Path error (PERR) mechanism) | HWM1.1:M | Yes ☐ No ☐ N/A ☐ |
| *HWM1.2 | Proactive tree building | 14.11.4 (Proactive tree building mode) | HWM1:M | Yes ☐ No ☐ N/A ☐ |
| HWM1.2.1 | PREQ processing for proactive tree building | 14.11.9 (Path request (PREQ) mechanism) | HWM1.2:M | Yes ☐ No ☐ N/A ☐ |
| HWM1.2.2 | PREP processing for proactive tree building | 14.11.10 (Path reply (PREP) mechanism) | HWM1.2:M | Yes ☐ No ☐ N/A ☐ |
| HWM1.2.3 | PERR processing for proactive tree building | 14.11.11 (Path error (PERR) mechanism) | HWM1.2:M | Yes ☐ No ☐ N/A ☐ |
| HWM1.2.4 | RANN processing | 14.11.12 (Root announcement (RANN) mechanism) | HWM1.2:M | Yes ☐ No ☐ N/A ☐ |
| HWM2 | Maintenance of forwarding information | 10.37.2 (Forwarding information), 14.11.8.4 (Forwarding information) | MP15:M | Yes ☐ No ☐ N/A ☐ |

## B.4.22 QMF extensions

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| QMF1 | Extended Capabilities element | 9.4.2.25 (Extended Capabilities element) | CFQMF:M | Yes ☐ No ☐ N/A ☐ |
| QMF2 | Channel access procedures for QMFs | 10.2.3.2 (HCF contention based channel access (EDCA)) | CFQMF:M | Yes ☐ No ☐ N/A ☐ |
| QMF3 | Duplicate detection and recovery for QMFs | 10.3.2.14 (Duplicate detection and recovery) | CFQMF:M | Yes ☐ No ☐ N/A ☐ |
| QMF4 | QMF policy Configuration | 11.24.2 (QMF policy advertisement and configuration procedures) | CFQMF:M | Yes ☐ No ☐ N/A ☐ |

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

## B.4.22 QMF extensions *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| QMF5 | Interpreting QMF priority | 11.24.3 (Interpreting QMF access categories) | CFQMF:M | Yes ☐ No ☐ N/A ☐ |
| QMF6 | CCMP cryptographic encapsulation for QMFs | 12.5.2.3 (CCMP cryptographic encapsulation) | (CFQMF AND PC34.1.10):M | Yes ☐ No ☐ N/A ☐ |

## B.4.23 RobustAVT extensions

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| AVT1 | Extended Capabilities element | 9.4.2.25 (Extended Capabilities element) | CFAVT:M | Yes ☐ No ☐ N/A ☐ |
| AVT2 | Groupcast with Retries (GCR) | 11.21.16.3.2 (GCR group membership procedures), 11.21.16.3.3 (GCR setup procedures), 11.21.16.3.4 (GCR operation), 11.21.16.3.5 (Concealment of GCR transmissions), 11.21.16.3.6 (GCR unsolicited retry) | (CFHT AND CFAVT AND WNM19):M (CFTVHT AND CFAVT AND WNM19):M | Yes ☐ No ☐ N/A ☐ |
| | | | (CFAP AND CFAVT AND WNM19 AND HTM4.4):M | Yes ☐ No ☐ N/A ☐ |
| AVT2.1 | Advanced GCR | 9.4.2.25 (Extended Capabilities element), 10.25.8 (GCR and GLK-GCR block ack), 11.21.16.3.7 (GCR block ack), 11.21.16.3.8 (GCR-SP) | (CFAVT AND QB5):O | Yes ☐ No ☐ N/A ☐ |
| AVT3 | Alternate EDCA transmit queues | 10.2.3.2 (HCF contention based channel access (EDCA)) | CFAVT AND CFHT:O | Yes ☐ No ☐ N/A ☐ |

## B.4.23 RobustAVT extensions *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| AVT6 | GCR for Mesh | 9.4.2.25 (Extended Capabilities element), 10.25.8 (GCR and GLK-GCR block ack), 11.21.16.3.6 (GCR unsolicited retry), 11.21.16.3.7 (GCR block ack) | (WNM19 AND HTM4.4 AND CFHT AND CFAVT AND CFMBSS):O<br><br>(WNM19 AND HTM4.4 AND CFTVHT AND CFAVT (#4138)AND CFMBSS):O | Yes ☐ No ☐ N/A ☐ |

## B.4.24 DMG features

### B.4.24.1 DMG MAC features

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| | Are the following MAC protocol features supported? | | | |
| DMG-M1 | DMG capabilities signaling | | | |
| DMG-M1.1 | DMG Capabilities element | 9.4.2.126 (DMG Capabilities element) | CFDMG:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M1.2 | Signaling of STA capabilities in Probe Request, (Re)Association Request frames | 9.3.3.5 (Association Request frame format), 9.3.3.7 (Reassociation Request frame format), 9.3.3.9 (Probe Request frame format), 9.4.2.126 (DMG Capabilities element) | (CFDMG AND (CFSTAofAP OR CFIBSS OR CFPBSSnotPCP)):M | Yes ☐ No ☐ N/A ☐ |

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

### B.4.24.1 DMG MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| DMG-M1.3 | Signaling of STA and BSS capabilities in DMG Beacon, Probe Response, (Re)Association Response frames | 9.3.3.6 (Association Response frame format), 9.3.3.8 (Reassociation Response frame format), 9.3.3.10 (Probe Response frame format), 9.3.4.2 (DMG Beacon), 9.4.2.126 (DMG Capabilities element) | (CFDMG AND (CFAP OR CFPCP)):M | Yes ☐ No ☐ N/A ☐ |
| DMG-M2 | Signaling of DMG operation | 9.4.2.127 (DMG Operation element) (#3062) | (CFDMG AND (CFAP OR CFPCP)):M | Yes ☐ No ☐ N/A ☐ |
| DMG-M3 | MSDU aggregation | | | |
| DMG-M3.1 | Reception of Basic A-MSDUs | 9.2.4.5 (QoS Control field), 9.3.2.2.2 (Basic A-MSDU subframe format) | CFDMG:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M3.2 | Basic A-MSDU format | 9.3.2.2.2 (Basic A-MSDU subframe format) | CFDMG:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M3.3 | Basic A-MSDU content | 9.3.2.2.2 (Basic A-MSDU subframe format) | CFDMG:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M3.4 | Transmission of Basic A-MSDUs | 9.2.4.5 (QoS Control field), 9.3.2.2.2 (Basic A-MSDU subframe format) | CFDMG:O | Yes ☐ No ☐ N/A ☐ |

Copyright © 2024 IEEE. All rights reserved.

### B.4.24.1 DMG MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| *DMG-M3.5 | Reception of Short A-MSDU | 9.2.4.5 (QoS Control field), 9.3.2.2.2 (Basic A-MSDU subframe format) | CFDMG:O | Yes ☐ No ☐ N/A ☐ |
| DMG-M3.6 | Short A-MSDU format | 9.3.2.2.4 (Short A-MSDU subframe format) | (DMG-M3.5 OR DMG-M3.8):M | Yes ☐ No ☐ N/A ☐ |
| DMG-M3.7 | Short A-MSDU content | 9.3.2.2.4 (Short A-MSDU subframe format) | (DMG-M3.5 OR DMG-M3.8):M | Yes ☐ No ☐ N/A ☐ |
| *DMG-M3.8 | Transmission of Short A-MSDU | 9.2.4.5 (QoS Control field), 9.3.2.2.4 (Short A-MSDU subframe format) | CFDMG:O | Yes ☐ No ☐ N/A ☐ |
| DMG-M3.9 | Negotiation of Short A-MSDU usage | 9.4.2.28 (TSPEC element) | CFDMG:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M4 | MPDU aggregation | | | |
| DMG-M4.1 | Reception of A-MPDU | 9.4.2.126.2 (DMG STA Capability Information field), 10.12.2 (A-MPDU length limit rules), 11.3 (STA authentication and association) | CFDMG:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M4.2 | A-MPDU format | 9.7.1 (A-MPDU format) | CFDMG:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M4.3 | A-MPDU content | 9.7.3 (A-MPDU contents) | CFDMG:M | Yes ☐ No ☐ N/A ☐ |

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

### B.4.24.1 DMG MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| DMG-M4.4 | Transmission of A-MPDU | 9.4.2.126.2 (DMG STA Capability Information field), 10.12.2 (A-MPDU length limit rules) | CFDMG:O | Yes ☐ No ☐ N/A ☐ |
| DMG-M5 | A-PPDU aggregation | 10.12 (A-MPDU operation)-10.14 (DMG A-PPDU and EDMG A-PPDU(11ay) operation) | | |
| *DMG-M5.1 | Reception of A-PPDU | 9.4.2.126.2 (DMG STA Capability Information field) | CFDMG:O | Yes ☐ No ☐ N/A ☐ |
| DMG-M5.2 | A-PPDU format | 20.5.2 (PPDU format), 20.5.2 (PPDU format) | (DMG-M5.1 OR DMG-M5.3):M | Yes ☐ No ☐ N/A ☐ |
| *DMG-M5.3 | Transmission of A-PPDU | 9.4.2.126.2 (DMG STA Capability Information field) | CFDMG:O | Yes ☐ No ☐ N/A ☐ |
| *DMG-M6 | Reverse direction aggregation exchanges | 9.4.2.126.2 (DMG STA Capability Information field), 10.29 (Reverse direction protocol) | CFDMG:O | Yes ☐ No ☐ N/A ☐ |
| DMG-M6.1 | Constraints regarding responses | 10.29.3 (Rules for RD initiator) | DMG-M6:M | Yes ☐ No ☐ N/A ☐ |
| (11ay)*DMG-M7 | DMG channel access | | | |
| DMG-M7.1 | ATI transmission | | | |
| DMG-M7.1.1 | (M118)Transmission of request | 10.38.3 (ATI transmission rules) | CFDMG AND (CFAP OR CFPCP):O | Yes ☐ No ☐ N/A ☐ |

### B.4.24.1 DMG MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| DMG-M7.4.1.3 | (M118)Random backoff function | 10.3.3 (Random backoff procedure) | DMG-M7.4:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M7.4.1.4 | (M118)DCF access procedure | 10.3 (DCF), 10.3.4.2 (Basic access), 10.3.4.5 (Control of the channel) | DMG-M7.4:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M7.4.1.5 | (M118)Random backoff procedure | 10.3 (DCF), 10.3.4.3 (Backoff procedure for DCF) | DMG-M7.4:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M7.4.1.6 | Recovery procedures and retransmit limits | 10.3.4.4 (Recovery procedures and retransmit limits) | DMG-M7.4:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M7.4.1.7 | Request to send (RTS)/DMG clear to send (DMG CTS) procedure | 10.3.2.6 (RTS/CTS with fragmentation), 10.3.2.9 (CTS and DMG CTS procedure), 10.3.2.10 (Dual CTS protection), 10.38.10 (Updating multiple NAVs) | DMG-M7.4:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M7.4.1.8 | Individually addressed MAC protocol data unit (MPDU) transfer | 10.3.5 (Individually addressed MPDU transfer procedure) | DMG-M7.4:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M7.4.1.9 | Group addressed MPDU transfer | 10.3.6 (Group addressed MPDU transfer procedure) | DMG-M7.4:M | Yes ☐ No ☐ N/A ☐ |

### B.4.24.1 DMG MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| DMG-M7.4.1.10 | MAC-level acknowledgment | 10.3.2.3 (IFS), 10.3.2.11 (Acknowledgment procedure) | DMG-M7.4:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M7.4.1.11 | Duplicate detection and recovery | 10.3.2.14 (Duplicate detection and recovery) | DMG-M7.4:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M7.4.2 | Enhanced DCF (EDCA) | | | |
| *DMG-M7.4.2.1 | Support for one transmit queue with AC_BE access category | 10.2.3.2 (HCF contention based channel access (EDCA)), 10.23.2.1 (Reference model) | DMG-M7.4:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M7.4.2.2 | Support for four transmit queues with a separate channel access entity associated with each | 10.2.3.2 (HCF contention based channel access (EDCA)), 10.23.2.1 (Reference model) | DMG-M7.4.2.1:O | Yes ☐ No ☐ N/A ☐ |
| DMG-M7.4.2.3 | AC_BE access category and differentiated channel access | 10.23.2.2 (EDCA backoff procedure), 10.23.2.4 (Obtaining an EDCA TXOP), 10.23.2.12 (Retransmit procedures) | DMG-M7.4.2.1:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M7.5 | Pseudo-static allocation | | | |

### B.4.24.1 DMG MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| DMG-M7.5.1 | Scheduling of pseudo-static allocation | 9.4.2.111 (PREQ element), 9.4.2.140 (PCP Handover element), 10.38.6.2 (Service period (SP) allocation), 10.38.6.5 (Guard time), 11.4.12.2 (Isochronous allocations) | DMG-M7.3.1:O | Yes ☐ No ☐ N/A ☐ |
| DMG-M7.5.2 | Operation within pseudo-static allocation | 9.4.2.138 (ADDBA Extension element), 9.4.2.140 (PCP Handover element), 10.38.6.2 (Service period (SP) allocation), 10.38.6.4 (Pseudo-static allocations) | CFDMG AND (CFAP OR CFSTAofAP OR CFPCP OR CFPBSSnotPCP):M | Yes ☐ No ☐ N/A ☐ |
| DMG-M7.6 | Guard time | 10.38.6.5 (Guard time) | DMG-M7.3.1:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M7.7 | DMG protected period | | | |
| *DMG-M7.7.1 | Establishment of DMG protected period with RTS at source DMG STA | 10.38.6.6 (DMG and CMMG protected period) | DMG-M7.3.1:O | Yes ☐ No ☐ N/A ☐ |
| *DMG-M7.7.2 | Establishment of DMG protected period using a DMG CTS frame at destination DMG STA | 10.38.6.6 (DMG and CMMG protected period) | DMG-M7.3.1:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M7.7.3 | Transmission of DMG DTS frame at destination DMG STA | 10.38.6.6 (DMG and CMMG protected period) | DMG-M7.7.2:O | Yes ☐ No ☐ N/A ☐ |

### B.4.24.1 DMG MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| DMG-M7.7.4 | Reception of DMG DTS frame at source DMG STA | 10.38.6.6 (DMG and CMMG protected period) | DMG-M7.7.1:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M7.8 | Service period recovery | 10.38.6.7 (Service period recovery) | DMG-M7.3.1 AND (CFAP OR CFPCP):O | Yes ☐ No ☐ N/A ☐ |
| DMG-M7.9 | Dynamic allocation of service period | 10.38.7 (Dynamic allocation of service period) | | |
| DMG-M7.9.1 | Polling period (PP) | 9.4.2.141.3 (Rate Adaptation Control/ Extended TPC field(11ay)), 10.38.7.2 (Polling period (PP)) | | |
| DMG-M7.9.1.1 | Transmission of Poll | 9.3.1.10 (Poll frame format) | CFDMG AND (CFAP OR CFPCP):O | Yes ☐ No ☐ N/A ☐ |
| DMG-M7.9.1.2 | Reception of Poll | 9.3.1.10 (Poll frame format) | CFDMG AND (CFSTAofAP OR CFPBSSnotPCP):M | Yes ☐ No ☐ N/A ☐ |
| DMG-M7.9.1.3 | Transmission of SPR | 9.3.1.11 (SPR frame format(#4303)) | CFDMG AND (CFSTAofAP OR CFPBSSnotPCP):M | Yes ☐ No ☐ N/A ☐ |
| DMG-M7.9.1.4 | Reception of SPR | 9.3.1.11 (SPR frame format(#4303)) | CFDMG AND (CFAP OR CFPCP):M | Yes ☐ No ☐ N/A ☐ |
| DMG-M7.9.2 | Grant period (GP) | 10.38.7.3 (Grant period (GP)) | | |
| DMG-M7.9.2.1 | Transmission of Grant | 9.3.1.12 (Grant frame format) | CFDMG AND (CFAP OR CFPCP):O | Yes ☐ No ☐ N/A ☐ |

### B.4.24.1 DMG MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| DMG-M7.9.2.2 | Reception of Grant | 9.3.1.12 (Grant frame format) | CFDMG AND (CFSTAofAP OR CFPBSSnotPCP):M | Yes ☐ No ☐ N/A ☐ |
| DMG-M7.10 | Dynamic truncation of service period | 10.38.8 (Dynamic truncation of service period) | | |
| DMG-M7.10.1 | Transmission of CF-End | 9.3.1.15 (SSW frame format(#4303)) | CFDMG:O | Yes ☐ No ☐ N/A ☐ |
| DMG-M7.10.2 | Reception of CF-End | 9.3.1.15 (SSW frame format(#4303)) | CFDMG:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M7.11 | Dynamic extension of service period | 10.38.9 (Dynamic extension of service period) | | |
| DMG-M7.11.1 | Transmission of SPR | 9.3.1.11 (SPR frame format(#4303)) | CFDMG AND (CFSTAofAP OR CFPBSSnotPCP):O | Yes ☐ No ☐ N/A ☐ |
| DMG-M7.11.2 | Reception of SPR | 9.3.1.11 (SPR frame format(#4303)) | CFDMG AND (CFAP OR CFPCP):M | Yes ☐ No ☐ N/A ☐ |
| DMG-M7.11.3 | Transmission of Grant | 9.3.1.12 (Grant frame format) | CFDMG AND (CFAP OR CFPCP):O | Yes ☐ No ☐ N/A ☐ |
| DMG-M7.11.4 | Reception of Grant | 9.3.1.12 (Grant frame format) | CFDMG AND (CFSTAofAP OR CFPBSSnotPCP):M | Yes ☐ No ☐ N/A ☐ |
| DMG-M7.12 | Isochronous and Asynchronous TS support | | | |

### B.4.24.1 DMG MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| DMG-M7.12.1 | Isochronous operation | 9.4.2.130 (Extended Schedule element), 9.4.2.132 (DMG TSPEC element), 9.4.2.136 (Awake Window element), 11.4.12.2 (Isochronous allocations) | DMG-M7.3.1 AND (CFInfraSTA OR CFPCP OR CFPBSSnotPCP):M | Yes ☐ No ☐ N/A ☐ |
| DMG-M7.12.2 | Asynchronous operation | 9.3.1.11 (SPR frame format(#4303)), 9.4.2.130 (Extended Schedule element), 9.4.2.132 (DMG TSPEC element), 9.4.2.136 (Awake Window element), 11.4.12.2 (Isochronous allocations) | DMG-M7.3.1 AND (CFInfraSTA OR CFPCP OR CFPBSSnotPCP):M | Yes ☐ No ☐ N/A ☐ |
| DMG-M8 | AP or PCP clustering | | | |
| DMG-M8.1 | S-AP in centralized AP or PCP cluster | 10.39 (DMG and CMMG AP or PCP clustering) | CFDMG:O | Yes ☐ No ☐ N/A ☐ |
| DMG-M8.2 | Except when centralized AP or PCP clusters on all channels supported by the AP or PCP in the operating class, join a centralized AP or PCP cluster or cease activity on channel | 10.39.2.2 (Centralized AP or PCP cluster formation) | CFDMG AND (CFAP OR CFPCP) AND NOT DMG-M8.1:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M8.3 | Other AP or PCP clustering | 10.39 (DMG and CMMG AP or PCP clustering) | CFDMG:O | Yes ☐ No ☐ N/A ☐ |
| DMG-M9 | DMG beamforming | | | |

### B.4.24.1 DMG MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| DMG-M9.1 | Sector-level sweep | 10.41.2 (Sector-level sweep (SLS) phase), 10.41.6.2 (SLS phase execution) | CFDMG:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M9.2 | Beamforming in BTI | 10.41.4 (Beamforming in BTI) | CFDMG:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M9.3 | Beamforming in A-BFT | 10.41.5 (Beamforming in A-BFT) | CFDMG:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M9.4 | BRP setup | 10.41.3.2 (BRP setup subphase) | CFDMG:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M9.5 | MID | 10.41.6.3.3 (MIDC subphase with MID subphase only) | CFDMG:O | Yes ☐ No ☐ N/A ☐ |
| DMG-M9.6 | BC | 10.41.6.3.4 (MIDC subphase with BC subphase only) | CFDMG:O | Yes ☐ No ☐ N/A ☐ |
| DMG-M9.7 | BRP | | | |
| *DMG-M9.7.1 | BRP with BS-FBCK | 10.41.3 (Beam Refinement Protocol (BRP) phase), 10.41.6.4 (BRP phase execution) | CFDMG:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M9.7.2 | BRP with channel measurement | 10.41.3 (Beam Refinement Protocol (BRP) phase), 10.41.6.4 (BRP phase execution) | DMG-M9.7.1:O | Yes ☐ No ☐ N/A ☐ |
| DMG-M9.8 | Beam tracking | 10.41.7 (Beam tracking) | CFDMG:M | Yes ☐ No ☐ N/A ☐ |

### B.4.24.1 DMG MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| DMG-M10 | DMG block ack with flow control | 9.4.2.126.2 (DMG STA Capability Information field), 10.41.9 (CDMG enhanced beam tracking) | CFDMG:O | Yes ☐ No ☐ N/A ☐ |
| DMG-M11 | DMG link adaptation | 10.41.9 (CDMG enhanced beam tracking) | CFDMG:O | Yes ☐ No ☐ N/A ☐ |
| DMG-M12 | Timing synchronization function (TSF) in a PBSS | | | |
| DMG-M12.1 | Timing in a PBSS | 11.1.2.1 (TSF for an infrastructure BSS or a PBSS), 11.1.5 (Adjusting STA timers) | CFPCP AND CFDMG:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M12.2 | PBSS initialization | 11.1.4 (Acquiring synchronization, scanning) | CFPCP AND CFDMG:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M13 | Power management | | | |
| DMG-M13.1 | STA power management without wakeup schedule | 11.2.7.2.2 (Non-AP and non-PCP STA operation without a wakeup schedule), 11.2.7.2.4 (Non-AP and non-PCP STA operation with or without a wakeup schedule) | CFDMG:M | Yes ☐ No ☐ N/A ☐ |

### B.4.24.1 DMG MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| DMG-M14.6 | FT authentication | 13 (Fast BSS transition) | (DMG-M14.2 OR DMG-M14.3) AND PC35:O | Yes ☐ No ☐ N/A ☐ |
| DMG-M14.7 | FILS authentication | 12.11 (Authentication for FILS) | (DMG-M14.2 OR DMG-M14.3) AND FILS4:O | Yes ☐ No ☐ N/A ☐ |
| DMG-M15 | DMG beamformed link and BSS maintenance | | | |
| DMG-M15.1 | Beamformed link maintenance | | | |
| *DMG-M15.1.1 | Negotiation of dot11BeamLinkMaintenanceTime timer | 9.5.6 (Beamformed Link Maintenance field) | CFDMG:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M15.1.2 | Beamformed link maintenance procedure | 11.27.1 (Beamformed link maintenance) | DMG-M15.1.1:O (11bd)NGVM1.2:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M15.2 | PCP handover | 11.27.2 (PCP Handover) | CFDMG:O | Yes ☐ No ☐ N/A ☐ |
| DMG-M16 | (M118)DMG BSS peer and service discovery | 11.28 (DMG BSS peer and service discovery) | CFDMG:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M17 | Changing DMG BSS parameters | 11.29 (Changing DMG BSS parameters) | CFDMG:O | Yes ☐ No ☐ N/A ☐ |
| *DMG-M18 | Spatial sharing and interference mitigation | 11.30 (Spatial sharing and interference mitigation for DMG STAs) | CFDMG:O | Yes ☐ No ☐ N/A ☐ |
| DMG-M19 | (M118)DMG coexistence with other DMG systems | 11.33 (DMG coexistence with non-IEEE-802.11 systems) | CFDMG:O | Yes ☐ No ☐ N/A ☐ |
| DMG-M20 | Traffic specification (TSPEC and DMG TSPEC) and associated frame formats | 9.6.3 (QoS Action frame details) | CFDMG:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M21 | DMG frame formats | | | |
| DMG-M21.1 | DMG Action field | 9.6.19.1 (DMG Action field) | CFDMG:M | Yes ☐ No ☐ N/A ☐ |

### B.4.24.1 DMG MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| DMG-M21.2 | Announce frame | 9.6.21.2 (Announce frame format) | CFDMG:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M21.3 | (M118)Power save configuration | 9.6.19.2 (Power Save Configuration Request frame format), 9.6.19.3 (Power Save Configuration Response frame format) | CFDMG:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M21.4 | (M118)Information request/response | 9.6.19.4 (Information Request frame format), 9.6.19.5 (Information Response frame format) | CFDMG:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M21.5 | BRP | 9.6.21.3 (BRP frame format) | CFDMG:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M21.6 | Handover | 9.6.19.6 (Handover Request frame format), 9.6.19.7 (Handover Response frame format) | DMG-M15.2:M | Yes ☐ No ☐ N/A ☐ |
| DMG-M21.7 | DMG relay | 9.6.19.8 (Relay Search Request frame format)– 9.6.19.22 (ROC Response frame format) | DMG-M22:M | Yes ☐ No ☐ N/A ☐ |

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

### B.4.24.1 DMG MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| DMG-M22 | DMG relay | 10.44 (DMG relay operation), 11.34 (DMG relay procedures) | CFDMG:O | Yes ☐ No ☐ N/A ☐ |
| (11ay)DMG-M23 | Segmentation and Reassembly (SAR) | 10.69 (DMG segmentation and reassembly operation(11ay)) | CFDMG:O | Yes ☐ No ☐ N/A ☐ |

### B.4.24.2 DMG PHY features

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| | Are the following PHY protocol features supported? | | | |
| DMG-P1 | PHY operating modes | | | |
| DMG-P1.1 | Operation according to Clause 20 (Directional multi-gigabit (DMG) PHY specification) | 20 (Directional multi-gigabit (DMG) PHY specification) | CFDMG:M | Yes ☐ No ☐ N/A ☐ |
| DMG-P2 | PHY frame format | | | |
| *DMG-P2.1 | DMG control mode format | 20.4 (DMG control mode) | CFDMG:M | Yes ☐ No ☐ N/A ☐ |
| *DMG-P2.2 | DMG SC mode format | 20.5 (DMG SC mode) | CFDMG:M | Yes ☐ No ☐ N/A ☐ |
| *DMG-P2.3 | DMG low-power SC mode format. The DMG low-power SC mode is obsolete. Support for this mechanism might be removed in a later revision of the standard. | 20.6 (DMG low-power SC mode) | CFDMG:O | Yes ☐ No ☐ N/A ☐ |
| DMG-P2.4 | Modulation and coding schemes (MCS) | | | |
| (#2291)DMG-P2.4.1 | MCS 0 of DMG control mode | 20.4 (DMG control mode)(#2292) | DMG-P2.1:M | Yes ☐ No ☐ N/A ☐ |
| (#2291)DMG-P2.4.2 | MCS 1-12 of DMG SC mode | 20.5 (DMG SC mode)(#2292) | | |

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

### B.4.24.2 DMG PHY features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| (#2291)DMG-P2.4.2.1 | MCS 1-4 | 20.5 (DMG SC mode)(#2292) | DMG-P2.2:M | Yes ☐ No ☐ N/A ☐ |
| (#2291)DMG-P2.4.2.2 | MCS 5-12 | 20.5 (DMG SC mode)(#2292) | DMG-P2.2:O | Yes ☐ No ☐ N/A ☐ |
| (#2291)DMG-P2.4.2.3 | π/2-8-PSK for MCS 10 and 11 | 20.5 (DMG SC mode)(#2292) | DMG-P2.2:O | Yes ☐ No ☐ N/A ☐ |
| (#2291)DMG-P2.4.3 | MCS 25-31 of DMG low-power SC mode (M118)The DMG low-power SC mode is obsolete. Support for this mechanism might be removed in a later revision of the standard. | 20.6 (DMG low-power SC mode)(#2292) | DMG-P2.3:M | Yes ☐ No ☐ N/A ☐ |
| (#2291)DMG-P2.5 | Common preamble format | 20.3.6 (Common preamble) | CFDMG:M | Yes ☐ No ☐ N/A ☐ |
| (#2291)DMG-P2.6 | Use of LDPC codes | 20.3.8 (Common LDPC parity matrices) | CFDMG:M | Yes ☐ No ☐ N/A ☐ |

## B.4.25 Very high throughput (VHT) features

### B.4.25.1 VHT MAC features

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| | Are the following MAC protocol features supported? | | | |
| VHTM1 | VHT capabilities signaling | | | |
| VHTM1.1 | VHT Capabilities element | 9.4.2.156.1 (VHT Capabilities element structure) | CFVHT:M | Yes ☐ No ☐ N/A ☐ |

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

### B.4.25.1 VHT MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| VHTM1.2 | Signaling of STA capabilities in Probe Request, (Re)Association Request frames | 9.3.3.5 (Association Request frame format), 9.3.3.7 (Reassociation Request frame format), 9.3.3.9 (Probe Request frame format), 9.4.2.156.1 (VHT Capabilities element structure) | (CFVHT AND CFIndepSTA): M (CFVHT AND CFMBSS):M | Yes ☐ No ☐ N/A ☐ |
| VHTM1.3 | Signaling of STA and BSS capabilities in Beacon, Probe Response, (Re)Association Response frames | 9.3.3.2 (Beacon frame format), 9.3.3.6 (Association Response frame format), 9.3.3.8 (Reassociation Response frame format), 9.3.3.10 (Probe Response frame format), 9.4.2.156 (VHT Capabilities element) | (CFVHT AND CFAP):M (CFVHT AND CFMBSS):M | Yes ☐ No ☐ N/A ☐ |
| VHTM2 | Signaling of VHT operation | 9.4.2.157 (VHT Operation element) | (CFVHT AND CFAP):M (CFVHT AND CFMBSS):M (CFVHT AND CFIBSS):M | Yes ☐ No ☐ N/A ☐ |
| VHTM3 | Link adaptation | | | |
| *VHTM3.1 | Use of the VHT variant HT Control field for link adaptation in immediate response exchange. | 9.2.4.6 (HT Control field), 9.3.3.14 (Action No Ack frame format), 10.31.3 (Link adaptation using the VHT variant HT Control field), 10.8 (HT Control field operation) | CFVHT:O, CFS1G:O | Yes ☐ No ☐ N/A ☐ |
| VHTM4 | Transmit beamforming | | | |

This is an unapproved IEEE Standards Draft, subject to change.

### B.4.25.1 VHT MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| *VHTM4.1 | SU Beamformer Capable | 9.4.2.156 (VHT Capabilities element) | CFVHT:O | Yes ☐ No ☐ N/A ☐ |
| *VHTM4.2 | SU Beamformee Capable | 9.4.2.156 (VHT Capabilities element) | CFVHT:O | Yes ☐ No ☐ N/A ☐ |
| *VHTM4.3 | MU Beamformer Capable | 9.4.2.156 (VHT Capabilities element) | CFAP AND VHTM4.1:O | Yes ☐ No ☐ N/A ☐ |
| *VHTM4.4 | MU Beamformee Capable | 9.4.2.156 (VHT Capabilities element) | CFIndepSTA AND VHTM4.2:O | Yes ☐ No ☐ N/A ☐ |
| VHTM4.5 | Transmission of null data PPDU | 10.35 (Null data PPDU (NDP) sounding) | VHTM4.1:M | Yes ☐ No ☐ N/A ☐ |
| VHTM4.6 | Reception of null data PPDU | 10.35 (Null data PPDU (NDP) sounding) | VHTM4.2:M | |
| VHTM5 | VHT Sounding Protocol | | | |
| VHTM5.1 | VHT sounding protocol as SU beamformer | 10.35.5 (VHT sounding protocol) | VHTM4.1:M | Yes ☐ No ☐ N/A ☐ |
| VHTM5.2 | VHT sounding protocol as SU beamformee | 10.35.5 (VHT sounding protocol) | VHTM4.2:M | Yes ☐ No ☐ N/A ☐ |
| VHTM5.3 | VHT sounding protocol as MU beamformer | 10.35.5 (VHT sounding protocol) | VHTM4.3:M | Yes ☐ No ☐ N/A ☐ |
| VHTM5.4 | VHT sounding protocol as MU beamformee | 10.35.5 (VHT sounding protocol) | VHTM4.4:M | Yes ☐ No ☐ N/A ☐ |
| VHTM6 | TXOP Sharing | | | |
| VHTM6.1 | Sharing of EDCA TXOP | 10.23.2.7 (Sharing an EDCA TXOP) | CFVHT:O | Yes ☐ No ☐ N/A ☐ |
| VHTM6.2 | Use of Primary and Secondary AC | 10.23.2.7 (Sharing an EDCA TXOP) | VHTM6.1:M | Yes ☐ No ☐ N/A ☐ |
| VHTM7 | VHT TXOP power saving | 11.2.3.16 (VHT TXOP power save) | CFVHT:O | Yes ☐ No ☐ N/A ☐ |
| VHTM8 | (M118)BSS operation | | | |

### B.4.25.1 VHT MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| VHTM8.1 | Use of primary 20 MHz, secondary 20 MHz, and secondary 40 MHz channels | 10.3.2.7 (VHT and S1G RTS procedure), 10.3.2.9 (CTS and DMG CTS procedure) | CFVHT:M | Yes ☐ No ☐ N/A ☐ |
| VHTM8.2 | Use of secondary 80 MHz channels for 160 MHz and 80+80 MHz | 11.38.1 (Basic VHT BSS functionality) | (VHTP3.4 OR VHTP3.5):M | Yes ☐ No ☐ N/A ☐ |
| VHTM8.3 | CCA on primary 20 MHz, secondary 20 MHz, and secondary 40 MHz channels | 11.38.5 (NAV assertion in a VHT BSS) | CFVHT:M | Yes ☐ No ☐ N/A ☐ |
| VHTM8.4 | CCA on secondary 80 MHz channels for 160 MHz and 80+80 MHz | 11.38.5 (NAV assertion in a VHT BSS) | (VHTP3.4 OR VHTP3.5):M | Yes ☐ No ☐ N/A ☐ |
| VHTM9 | Group ID | | | |
| VHTM9.1 | Transmission of Group ID Management frame | 9.6.22.3 (Group ID Management frame format) | VHTM4.3:M | Yes ☐ No ☐ N/A ☐ |
| VHTM9.2 | Reception of Group ID Management frame | 9.6.22.3 (Group ID Management frame format) | VHTM4.4:M | |
| VHTM10 | Bandwidth signaling | | | |
| VHTM10.1 | Support for non-HT bandwidth signaling and static operation | 10.3.2.7 (VHT and S1G RTS procedure) | CFVHT:M | Yes ☐ No ☐ N/A ☐ |
| VHTM10.2 | Support for non-HT bandwidth signaling and dynamic operation | 10.3.2.7 (VHT and S1G RTS procedure) | CFVHT:O | Yes ☐ No ☐ N/A ☐ |
| VHTM11 | S-MPDU format | 10.12.7 (Setting the EOF/Tag(11ax) field of the MPDU delimiter) | CFVHT:M CGS1G:M | Yes ☐ No ☐ N/A ☐ |
| VHTM12 | Partial AID in VHT PPDU | 10.19 (Group ID and partial AID in VHT and CMMG PPDUs) | CFVHT:M | Yes ☐ No ☐ N/A ☐ |
| VHTM13 | Extended BSS Load element | 9.4.2.158 (Extended BSS Load element) | CFVHT:O | Yes ☐ No ☐ N/A ☐ |
| VHTM13.1 | Transmission of the Extended BSS Load element | 9.4.2.158 (Extended BSS Load element) | CFAP AND CFVHT:O | Yes ☐ No ☐ N/A ☐ |
| VHTM14 | Quiet Channel element | | | |

### B.4.25.1 VHT MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| VHTM14.1 | Transmission of Quiet Channel element by an AP or mesh station in Beacon and Probe Response frames | 9.3.3.2 (Beacon frame format), 9.3.3.10 (Probe Response frame format), 9.4.2.163 (Quiet Channel element), 11.8.3 (Quieting channels for testing) | (CFAP OR CFMBSS) AND CFSM AND CFVHT AND VHTP3.4:O | Yes ☐ No ☐ N/A ☐ |
| VHTM14.2 | Transmission of Quiet Channel element by an independent station or mesh station in Beacon and Probe Response frames | 9.3.3.2 (Beacon frame format), 9.3.3.10 (Probe Response frame format), 9.4.2.163 (Quiet Channel element), 11.8.3 (Quieting channels for testing) | (CFIndepSTA OR CFMBSS) AND CFSM AND CFVHT AND VHTP3.4:O | Yes ☐ No ☐ N/A ☐ |
| VHTM14.3 | Reception of Quiet Channel element by an independent station or mesh station in Beacon and Probe Response frames | 9.3.3.2 (Beacon frame format), 9.3.3.10 (Probe Response frame format), 9.4.2.163 (Quiet Channel element), 11.8.3 (Quieting channels for testing) | (CFIndepSTA OR CFMBSS) AND CFSM AND CFVHT:M | Yes ☐ No ☐ N/A ☐ |
| VHTM15 | Space-time block coding (STBC) | | | |
| VHTM15.1 | STBC operation | 9.4.2.156 (VHT Capabilities element), 10.16 (STBC operation) | VHTP9:M | Yes ☐ No ☐ N/A ☐ |
| VHTM15.2 | Transmission of at least 2×1 STBC | 9.4.2.156.2 (VHT Capabilities Information field) | VHTP9:O.1 | Yes ☐ No ☐ N/A ☐ |
| VHTM15.3 | Reception of 1 STBC spatial stream | 9.4.2.156.2 (VHT Capabilities Information field) | VHTP9:O.1 | Yes ☐ No ☐ N/A ☐ |

### B.4.25.1 VHT MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| VHTM15.4 | Reception of 2 STBC spatial streams | 9.4.2.156.2 (VHT Capabilities Information field) | VHTM15.3:O | Yes ☐ No ☐ N/A ☐ |
| VHTM15.5 | Reception of 3 STBC spatial streams | 9.4.2.156.2 (VHT Capabilities Information field) | VHTM15.4:O | Yes ☐ No ☐ N/A ☐ |
| VHTM15.6 | Reception of 4 STBC spatial streams | 9.4.2.156.2 (VHT Capabilities Information field) | VHTM15.5:O | Yes ☐ No ☐ N/A ☐ |
| VHTM16 | Highest Supported Long GI Data Rate | | | |
| VHTM16.1 | Tx Highest Supported Long GI Data Rate | 9.4.2.156.3 (Supported VHT-MCS and NSS Set field) | CFVHT:M | Yes ☐ No ☐ N/A ☐ |
| VHTM16.2 | Rx Highest Supported Long GI Data Rate | 9.4.2.156.3 (Supported VHT-MCS and NSS Set field) | CFVHT:M | Yes ☐ No ☐ N/A ☐ |
| NOTE—Required support for MCS might be limited by the declaration of Tx and Rx Highest Supported Long GI Data Rates. | | | | |

### B.4.25.2 VHT PHY features

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| | Are the following PHY protocol features supported? | | | |
| VHTP1 | PHY operating modes | | | |
| VHTP1.1 | Operation according to Clause 17 (Orthogonal frequency division multiplexing (OFDM) PHY specification) (OFDM) and/or Clause 19 (High Throughput (HT) PHY specification(#2297)) (high throughput) | 21.1.4 (PPDU formats) | CFVHT:M | Yes ☐ No ☐ N/A ☐ |
| VHTP2 | VHT format | 21.3.2 (VHT PPDU format) | CFVHT:M | Yes ☐ No ☐ N/A ☐ |
| VHTP3 | BSS bandwidth | | | |
| VHTP3.1 | 20 MHz operation | 11.38.1 (Basic VHT BSS functionality) | CFVHT:M | Yes ☐ No ☐ N/A ☐ |

### B.4.25.2 VHT PHY features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| VHTP3.2 | 40 MHz operation | 11.38.1 (Basic VHT BSS functionality) | CFVHT:M | Yes ☐ No ☐ N/A ☐ |
| VHTP3.3 | 80 MHz operation | 11.38.1 (Basic VHT BSS functionality) | CFVHT:M | Yes ☐ No ☐ N/A ☐ |
| VHTP3.4 | 160 MHz operation | 11.38.1 (Basic VHT BSS functionality) | CFVHT:O VHTP3.5:M | Yes ☐ No ☐ N/A ☐ |
| VHTP3.5 | 80+80 MHz operation | 11.38.1 (Basic VHT BSS functionality) | CFVHT:O | Yes ☐ No ☐ N/A ☐ |
| VHTP4 | Bandwidth indication | 17.3.5.5 (PHY DATA scrambler and descrambler) | CFVHT:M | Yes ☐ No ☐ N/A ☐ |
| VHTP5 | PHY timing parameters | | | |
| VHTP5.1 | Values in 20 MHz channel | 21.3.6 (Timing-related parameters) | CFVHT:M | Yes ☐ No ☐ N/A ☐ |
| VHTP5.2 | Values in 40 MHz channel | 21.3.6 (Timing-related parameters) | CFVHT:M | Yes ☐ No ☐ N/A ☐ |
| VHTP5.3 | Values in 80 MHz channel | 21.3.6 (Timing-related parameters) | CFVHT:M | Yes ☐ No ☐ N/A ☐ |
| VHTP5.4 | Values in 160 MHz channel | 21.3.6 (Timing-related parameters) | VHTP3.4:M | Yes ☐ No ☐ N/A ☐ |
| VHTP5.5 | Values in 80+80 MHz channel | 21.3.6 (Timing-related parameters) | VHTP3.5:M | Yes ☐ No ☐ N/A ☐ |
| VHTP6 | VHT preamble | 21.3.8 (VHT preamble) | CFVHT:M | Yes ☐ No ☐ N/A ☐ |
| VHTP7 | Use of LDPC Code | 21.3.10.5.4 (LDPC coding) | CFVHT:O | Yes ☐ No ☐ N/A ☐ |
| VHTP8 | Modulation and coding schemes (MCS) | | | |
| VHTP8.1 | CBW20, CBW40, and CBW80 | 21.5 (Parameters for VHT-MCSs) | | |
| VHTP8.1.1 | VHT-MCS with Index 0-7 and $N_{SS} = 1$ | 21.5 (Parameters for VHT-MCSs) | CFVHT:M | Yes ☐ No ☐ N/A ☐ |
| VHTP8.1.2 | VHT-MCS with Index 0-8 and $N_{SS} = 1$ | 21.5 (Parameters for VHT-MCSs) | VHTP8.1.1:O | Yes ☐ No ☐ N/A ☐ |
| VHTP8.1.3 | VHT-MCS with Index 0-9 and $N_{SS} = 1$ | 21.5 (Parameters for VHT-MCSs) | VHTP8.1.2:O | Yes ☐ No ☐ N/A ☐ |

### B.4.25.2 VHT PHY features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| VHTP8.1.4 | VHT-MCS with Index 0-7 and $N_{SS} = 2$ | 21.5 (Parameters for VHT-MCSs) | CFVHT:O | Yes ☐ No ☐ N/A ☐ |
| VHTP8.1.5 | VHT-MCS with Index 0-8 and $N_{SS} = 2$ | 21.5 (Parameters for VHT-MCSs) | VHTP8.1.4:O | Yes ☐ No ☐ N/A ☐ |
| VHTP8.1.6 | VHT-MCS with Index 0-9 and $N_{SS} = 2$ | 21.5 (Parameters for VHT-MCSs) | VHTP8.1.5:O | Yes ☐ No ☐ N/A ☐ |
| VHTP8.1.7 | VHT-MCS with Index 0-7 and $N_{SS} = 3$ | 21.5 (Parameters for VHT-MCSs) | CFVHT:O | Yes ☐ No ☐ N/A ☐ |
| VHTP8.1.8 | VHT-MCS with Index 0-8 and $N_{SS} = 3$ | 21.5 (Parameters for VHT-MCSs) | VHTP8.1.7:O | Yes ☐ No ☐ N/A ☐ |
| VHTP8.1.9 | VHT-MCS with Index 0-9 and $N_{SS} = 3$ | 21.5 (Parameters for VHT-MCSs) | VHTP8.1.7:O | Yes ☐ No ☐ N/A ☐ |
| VHTP8.1.10 | VHT-MCS with Index 0-7 and $N_{SS} = 4$ | 21.5 (Parameters for VHT-MCSs) | CFVHT:O | Yes ☐ No ☐ N/A ☐ |
| VHTP8.1.11 | VHT-MCS with Index 0-8 and $N_{SS} = 4$ | 21.5 (Parameters for VHT-MCSs) | VHTP8.1.10:O | Yes ☐ No ☐ N/A ☐ |
| VHTP8.1.12 | VHT-MCS with Index 0-9 and $N_{SS} = 4$ | 21.5 (Parameters for VHT-MCSs) | VHTP8.1.11:O | Yes ☐ No ☐ N/A ☐ |
| VHTP8.1.13 | VHT-MCS with Index 0-7 and $N_{SS} = 5$ | 21.5 (Parameters for VHT-MCSs) | CFVHT:O | Yes ☐ No ☐ N/A ☐ |
| VHTP8.1.14 | VHT-MCS with Index 0-8 and $N_{SS} = 5$ | 21.5 (Parameters for VHT-MCSs) | VHTP8.1.13:O | Yes ☐ No ☐ N/A ☐ |
| VHTP8.1.15 | VHT-MCS with Index 0-9 and $N_{SS} = 5$ | 21.5 (Parameters for VHT-MCSs) | VHTP8.1.14:O | Yes ☐ No ☐ N/A ☐ |
| VHTP8.1.16 | VHT-MCS with Index 0-7 and $N_{SS} = 6$ | 21.5 (Parameters for VHT-MCSs) | CFVHT:O | Yes ☐ No ☐ N/A ☐ |
| VHTP8.1.17 | VHT-MCS with Index 0-8 and $N_{SS} = 6$ | 21.5 (Parameters for VHT-MCSs) | VHTP8.1.16:O | Yes ☐ No ☐ N/A ☐ |
| VHTP8.1.18 | VHT-MCS with Index 0-9 and $N_{SS} = 6$ | 21.5 (Parameters for VHT-MCSs) | VHTP8.1.17:O | Yes ☐ No ☐ N/A ☐ |
| VHTP8.1.19 | VHT-MCS with Index 0-7 and $N_{SS} = 7$ | 21.5 (Parameters for VHT-MCSs) | CFVHT:O | Yes ☐ No ☐ N/A ☐ |
| VHTP8.1.20 | VHT-MCS with Index 0-8 and $N_{SS} = 7$ | 21.5 (Parameters for VHT-MCSs) | VHTP8.1.19:O | Yes ☐ No ☐ N/A ☐ |

### B.4.25.2 VHT PHY features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| VHTP8.3.22 | VHT-MCS with Index 0-7 and $N_{SS} = 8$ | 21.5 (Parameters for VHT-MCSs) | CFVHT:O | Yes ☐ No ☐ N/A ☐ |
| VHTP8.3.23 | VHT-MCS with Index 0-8 and $N_{SS} = 8$ | 21.5 (Parameters for VHT-MCSs) | VHTP8.3.22:O | Yes ☐ No ☐ N/A ☐ |
| VHTP8.3.24 | VHT-MCS with Index 0-9 and $N_{SS} = 8$ | 21.5 (Parameters for VHT-MCSs) | VHTP8.3.23:O | Yes ☐ No ☐ N/A ☐ |
| VHTP8.4 | Transmit and receive support for 400 ns GI | 21.5 (Parameters for VHT-MCSs) | CFVHT:O | Yes ☐ No ☐ N/A ☐ |
| VHTP9 | Space-time block coding (STBC) | 21.3.10.9.4 (Space-time block coding) | CFVHT:O | Yes ☐ No ☐ N/A ☐ |
| VHTP10 | Non-HT duplicate format | 21.3.10.12 (Non-HT duplicate transmission) | CFVHT:M | Yes ☐ No ☐ N/A ☐ |

## B.4.26 TVWS functions

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| TVWS 1 | Fixed STA TVWS operation | 11.42 (Operation under the control of a GDB), Annex D, E.2.5 (TVWS band in the United States and its territories and Canada (54–698 MHz)(#296)) | CFTVHT:O | Yes ☐ No ☐ N/A ☐ |
| TVWS 2 | Master STA TVWS operation | 11.42 (Operation under the control of a GDB), 11.42.2 (GDD enabling STA operation), Annex D, E.2.5 (TVWS band in the United States and its territories and Canada (54–698 MHz)(#296)) | CFTVHT:O | Yes ☐ No ☐ N/A ☐ |
| *TVWS3 | Client STA TVWS operation | 11.42.3 (GDD dependent STA operation), Annex D, E.2.5 (TVWS band in the United States and its territories and Canada (54–698 MHz)(#296)) | CFTVHT:O | Yes ☐ No ☐ N/A ☐ |

## B.4.26 TVWS functions

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| TVWS 3.1 | GDD dependent STA TVWS behavior | 11.42.3 (GDD dependent STA operation), Annex D, E.2.5 (TVWS band in the United States and its territories and Canada (54–698 MHz)(#296)) | WS3:M | Yes ☐ No ☐ N/A ☐ |
| TVWS 4 | Channel Availability Query | 9.4.5.2 (Query List ANQP-element), 9.6.7.25 (Channel Availability Query frame format), 11.42.4 (Channel availability query (CAQ) procedure) | CFTVHT:M | Yes ☐ No ☐ N/A ☐ |
| TVWS 5 | Channel Schedule Management | 9.4.5.3 (Capability List ANQP-element), 9.6.7.26 (Channel Schedule Management frame format), 11.42.5 (Channel schedule management (CSM) procedures) | CFTVHT:M | Yes ☐ No ☐ N/A ☐ |
| TVWS 6 | Contact Verification Signal | 9.6.7.27 (Contact Verification Signal frame format), 11.42.6 (Contact verification signal (CVS)) | CFTVHT:M | Yes ☐ No ☐ N/A ☐ |
| *TVWS 7 | Network Channel Control | 9.4.5.4 (Venue Name ANQP-element), 9.6.7.30 (Network Channel Control frame format), 11.42.7 (Network channel control (NCC) procedures) | CFTVHT:M | |
| TVWS 7.1 | NCC Requesting STA | 11.42.7.2 (NCC requesting STA) | CFTVHT:M | Yes ☐ No ☐ N/A ☐ |
| TVWS 7.2 | NCC Responding STA | 11.42.7.3 (NCC responding STA) | CFTVHT:O | Yes ☐ No ☐ N/A ☐ |
| TVWS 8 | White Space Map Announcement | 9.4.2.168 (White Space Map element), 9.6.7.31 (White Space Map Announcement frame format), 11.42.8 (White space map (WSM)) | CFTVHT:M | Yes ☐ No ☐ N/A ☐ |

### B.4.26.1 TVHT MAC features

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| | Are the following MAC protocol features supported? | | | |
| TVHTM1 | TVHT Capabilities element | | | |
| TVHTM1.1 | VHT Capabilities element | 9.4.2.156.1 (VHT Capabilities element structure) | CFTVHT:O | Yes ☐ No ☐ N/A ☐ |
| TVHTM1.2 | Signaling of STA capabilities in Probe Request, (Re)Association Request frames | 9.3.3.5 (Association Request frame format), 9.3.3.7 (Reassociation Request frame format), 9.3.3.9 (Probe Request frame format), 9.4.2.156.1 (VHT Capabilities element structure) | (CFTVHT AND CFIndepSTA): O (CFTVHT AND CFMBSS):O | Yes ☐ No ☐ N/A ☐ |
| TVHTM1.3 | Signaling of STA and BSS capabilities in Beacon, Probe Response, (Re)Association Response frames | 9.3.3.2 (Beacon frame format), 9.3.3.6 (Association Response frame format), 9.3.3.8 (Reassociation Response frame format), 9.3.3.10 (Probe Response frame format), 9.4.2.156 (VHT Capabilities element) | (CFTVHT AND CFAP):O (CFTVHT AND CFMBSS):O | Yes ☐ No ☐ N/A ☐ |
| TVHTM2 | Signaling of VHT operation | 9.4.2.157 (VHT Operation element) | (CFTVHT AND CFAP):O (CFTVHT AND CFMBSS):O (CFTVHT AND CFIBSS):O | Yes ☐ No ☐ N/A ☐ |
| TVHTM3 | Link adaptation | | | |

### B.4.26.1 TVHT MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| TVHTM3.1 | Use of the VHT variant HT Control field for link adaptation in immediate response exchange | 9.2.4.6 (HT Control field), 9.3.3.14 (Action No Ack frame format), 10.29.3 (Rules for RD initiator) | CFTVHT:O | Yes ☐ No ☐ N/A ☐ |
| TVHTM4 | Transmit beamforming | | | |
| *TVHTM4.1 | SU Beamformer Capable | 9.4.2.156 (VHT Capabilities element) | CFTVHT:O | Yes ☐ No ☐ N/A ☐ |
| *TVHTM4.2 | SU Beamformee Capable | 9.4.2.156 (VHT Capabilities element) | CFTVHT:O | Yes ☐ No ☐ N/A ☐ |
| *TVHTM4.3 | MU Beamformer Capable | 9.4.2.156 (VHT Capabilities element) | CFAP AND TVHTM4.1:O | Yes ☐ No ☐ N/A ☐ |
| *TVHTM4.4 | MU Beamformee Capable | 9.4.2.156 (VHT Capabilities element) | CFIndepSTA AND TVHTM4.2:O | Yes ☐ No ☐ N/A ☐ |
| TVHTM4.5 | Transmission of null data PPDU | 10.31 (Link adaptation) | TVHTM4.1:M | Yes ☐ No ☐ N/A ☐ |
| TVHTM4.6 | Reception of null data PPDU | 10.31 (Link adaptation) | TVHTM4.2:M | Yes ☐ No ☐ N/A ☐ |
| TVHTM5 | VHT sounding protocol | | | |
| TVHTM5.1 | VHT sounding protocol as SU beamformer | 10.35.5 (VHT sounding protocol) | TVHTM4.1:M | Yes ☐ No ☐ N/A ☐ |
| TVHTM5.2 | VHT sounding protocol as SU beamformee | 10.35.5 (VHT sounding protocol) | TVHTM4.2:M | Yes ☐ No ☐ N/A ☐ |
| TVHTM5.3 | VHT sounding protocol as MU beamformer | 10.35.5 (VHT sounding protocol) | TVHTM4.3:M | Yes ☐ No ☐ N/A ☐ |
| TVHTM5.4 | VHT sounding protocol as MU beamformee | 10.35.5 (VHT sounding protocol) | TVHTM4.4:M | Yes ☐ No ☐ N/A ☐ |
| TVHTM6 | TXOP Sharing | | | |

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

### B.4.26.1 TVHT MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| TVHTM6.1 | Sharing of EDCA TXOP | 10.23.2.5 (EDCA channel access in a VHT or TVHT BSS)(#6585) | CFTVHT:O | Yes ☐ No ☐ N/A ☐ |
| TVHTM6.2 | Use of Primary and Secondary AC | 10.23.2.5 (EDCA channel access in a VHT or TVHT BSS)(#6585) | TVHTM6.1:M | Yes ☐ No ☐ N/A ☐ |
| TVHTM7 | VHT TXOP power saving | 11.2.3.16(VHT TXOP power save)(#6585) | CFTVHT:O | Yes ☐ No ☐ N/A ☐ |
| TVHTM8 | BSS Operation | | | |
| TVHTM8.1 | Use of primary TVHT_W, secondary TVHT_W, and secondary TVHT_2W channels | 11.41 (Basic TVHT BSS functionality) | CFTVHT:O | Yes ☐ No ☐ N/A ☐ |
| TVHTM8.2 | CCA on primary TVHT_W, secondary TVHT_W, and secondary TVHT_2W channels | 11.41 (Basic TVHT BSS functionality) | CFTVHT:O | Yes ☐ No ☐ N/A ☐ |
| TVHTM9 | Group ID | | | |
| TVHTM9.1 | Transmission of Group ID Management frame | 9.6.22.3 (Group ID Management frame format) | TVHTM4.3:M | Yes ☐ No ☐ N/A ☐ |
| TVHTM9.2 | Reception of Group ID Management frame | 9.6.22.3 (Group ID Management frame format) | TVHTM4.4:M | Yes ☐ No ☐ N/A ☐ |
| TVHTM10 | Bandwidth signaling | | | |
| TVHTM10.1 | Support for non-HT bandwidth signaling and static operation | 10.3.2.9 (CTS and DMG CTS procedure)(#6585) | CFTVHT:M | Yes ☐ No ☐ N/A ☐ |
| TVHTM10.2 | Support for non-HT bandwidth signaling and dynamic operation | 10.3.2.9 (CTS and DMG CTS procedure)(#6585) | CFTVHT:O | Yes ☐ No ☐ N/A ☐ |
| TVHTM11 | S-MPDU | 10.12.8 (Transport of S-MPDUs) | CFTVHT:M | Yes ☐ No ☐ N/A ☐ |
| TVHTM12 | Partial AID in VHT PPDU | 10.19 (Group ID and partial AID in VHT and CMMG PPDUs) | CFTVHT:M | Yes ☐ No ☐ N/A ☐ |

### B.4.26.1 TVHT MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| TVHTM13 | Extended BSS Load element | 9.4.2.158 (Extended BSS Load element) | CFTVHT:O | Yes ☐ No ☐ N/A ☐ |
| TVHTM13.1 | Transmission of the Extended BSS Load element | 9.4.2.158 (Extended BSS Load element) | CFAP AND CFTVHT:O | Yes ☐ No ☐ N/A ☐ |
| TVHTM14 | Quiet Channel element | | | |
| TVHTM14.1 | Transmission of Quiet Channel element by an AP or mesh STA in Beacon and Probe Response frames | 9.3.3.2 (Beacon frame format), 9.3.3.10 (Probe Response frame format), 9.4.2.163 (Quiet Channel element), 11.8.3 (Quieting channels for testing) | (CFAP OR CFMBSS) AND CFSM AND CFTVHT AND TVHTP3.4:O | Yes ☐ No ☐ N/A ☐ |
| TVHTM14.2 | Transmission of Quiet Channel element by an independent STA or mesh STA in Beacon and Probe Response frames | 9.3.3.2 (Beacon frame format), 9.3.3.10 (Probe Response frame format), 9.4.2.163 (Quiet Channel element), 11.8.3 (Quieting channels for testing) | (CFIndepSTA OR CFMBSS) AND CFSM AND CFTVHT AND TVHTP3.4:O | Yes ☐ No ☐ N/A ☐ |
| TVHTM14.3 | Reception of Quiet Channel element by an independent STA or mesh STA in Beacon and Probe Response frames | 9.3.3.2 (Beacon frame format), 9.3.3.10 (Probe Response frame format), 9.4.2.163 (Quiet Channel element), 11.8.3 (Quieting channels for testing) | (CFIndepSTA OR CFMBSS) AND CFSM AND CFTVHT:O | Yes ☐ No ☐ N/A ☐ |
| TVHTM15 | Space-time block coding (STBC) | | | |
| TVHTM15.1 | STBC operation | 9.4.2.156 (VHT Capabilities element), 10.14 (DMG A-PPDU and EDMG A-PPDU(11ay) operation) | TVHTP9:M | Yes ☐ No ☐ N/A ☐ |

This is an unapproved IEEE Standards Draft, subject to change.

### B.4.26.1 TVHT MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| TVHTM15.2 | Transmission of at least 2×1 STBC | 9.4.2.156 (VHT Capabilities element) | TVHTP9:O.1 | Yes ☐ No ☐ N/A ☐ |
| TVHTM15.3 | Reception of 1 STBC spatial stream | 9.4.2.156 (VHT Capabilities element) | TVHTP9:O.1 | Yes ☐ No ☐ N/A ☐ |
| TVHTM15.4 | Reception of 2 STBC spatial stream | 9.4.2.156 (VHT Capabilities element) | TVHTM15.3:O | Yes ☐ No ☐ N/A ☐ |
| TVHTM15.5 | Reception of 3 STBC spatial stream | 9.4.2.156 (VHT Capabilities element) | TVHTM15.4:O | Yes ☐ No ☐ N/A ☐ |
| TVHTM15.6 | Reception of 4 STBC spatial stream | 9.4.2.156 (VHT Capabilities element) | TVHTM15.5:O | Yes ☐ No ☐ N/A ☐ |
| TVHTM16 | Highest Supported Long GI Data Rate | | | |
| TVHTM16.1 | Tx Highest Supported Long GI Data Rate | 9.4.2.156.3 (Supported VHT-MCS and NSS Set field) | CFTVHT:O | Yes ☐ No ☐ N/A ☐ |
| TVHTM16.2 | Rx Highest Supported Long GI Data Rate | 9.4.2.156.3 (Supported VHT-MCS and NSS Set field) | CFTVHT:O | Yes ☐ No ☐ N/A ☐ |
| NOTE—Required support for MCS might be limited by the declaration of Tx and Rx Highest Supported Long GI Data Rates. | | | | |

### B.4.26.2 TVHT PHY features

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| | Are the following PHY protocol features supported? | | | |
| TVHTP1 | PHY operating modes | | | Yes ☐ No ☐ N/A ☐ |
| TVHTP2 | VHT format | 21.3.2 (VHT PPDU format) | CFTVHT:M | Yes ☐ No ☐ N/A ☐ |
| TVHTP3 | BSS bandwidth | | | |

Copyright © 2024 IEEE. All rights reserved.

### B.4.26.2 TVHT PHY features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| TVHTP3.1 | TVHT_W operation | 11.41 (Basic TVHT BSS functionality) | CFTVHT:M | Yes ☐ No ☐ N/A ☐ |
| TVHTP3.2 | TVHT_2W operation | 11.41 (Basic TVHT BSS functionality) | CFTVHT:O | Yes ☐ No ☐ N/A ☐ |
| TVHTP3.3 | TVHT_W+W operation | 11.41 (Basic TVHT BSS functionality) | CFTVHT:O | Yes ☐ No ☐ N/A ☐ |
| TVHTP3.4 | TVHT_4W operation | 11.41 (Basic TVHT BSS functionality) | CFTVHT:O | Yes ☐ No ☐ N/A ☐ |
| TVHTP3.5 | TVHT_2W+2W operation | 11.41 (Basic TVHT BSS functionality) | CFTVHT:O | Yes ☐ No ☐ N/A ☐ |
| TVHTP4 | Bandwidth indication | 17.3.5.5 (PHY DATA scrambler and descrambler) | CFVHT:M | Yes ☐ No ☐ N/A ☐ |
| TVHTP5 | PHY timing parameters | | | |
| TVHTP5.1 | Values in 6 MHz channel | 22.3.6 (Timing-related parameters) | CFTVHT:M | Yes ☐ No ☐ N/A ☐ |
| TVHTP5.2 | Values in 7 MHz channel | 22.3.6 (Timing-related parameters) | CFTVHT:M | Yes ☐ No ☐ N/A ☐ |
| TVHTP5.3 | Values in 8 MHz channel | 22.3.6 (Timing-related parameters) | CFTVHT:M | Yes ☐ No ☐ N/A ☐ |
| TVHTP5.4 | Values in non-HT 6 MHz, 7 MHz, and 8 MHz channels | 22.2.4 (Support for NON_HT and HT formats) | CFTVHT:M | Yes ☐ No ☐ N/A ☐ |

### B.4.26.2 TVHT PHY features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| TVHTP6 | TVHT preamble | 22.3.8 (TVHT preamble) | CFTVHT:M | Yes ☐ No ☐ N/A ☐ |
| TVHTP7 | Use of LDPC Code | 11.5.4 (Error recovery upon a peer failure), 21.3 (VHT PHY) | CFTVHT:O | Yes ☐ No ☐ N/A ☐ |
| TVHTP8 | Modulation and coding schemes (MCS) | | | |
| TVHTP8.1 | TVHT_MODE_1 | 22.5 (Parameters for TVHT-MCSs) | | |
| TVHTP8.1.1 | TVHT-MCS with Index 0-7 and $N_{SS} = 1$ | 22.5 (Parameters for TVHT-MCSs) | CFTVHT:M | Yes ☐ No ☐ N/A ☐ |
| TVHTP8.1.2 | TVHT-MCS with Index 0-8 and $N_{SS} = 1$ | 22.5 (Parameters for TVHT-MCSs) | TVHTP8.1.1:O | Yes ☐ No ☐ N/A ☐ |
| TVHTP8.1.3 | TVHT-MCS with Index 0-9 and $N_{SS} = 1$ | 22.5 (Parameters for TVHT-MCSs) | TVHTP8.1.2:O | Yes ☐ No ☐ N/A ☐ |
| TVHTP8.1.4 | TVHT-MCS with Index 0-7 and $N_{SS} = 2$ | 22.5 (Parameters for TVHT-MCSs) | CFTVHT:O | Yes ☐ No ☐ N/A ☐ |
| TVHTP8.1.5 | TVHT-MCS with Index 0-8 and $N_{SS} = 2$ | 22.5 (Parameters for TVHT-MCSs) | TVHTP8.1.4:O | Yes ☐ No ☐ N/A ☐ |
| TVHTP8.1.6 | TVHT-MCS with Index 0-9 and $N_{SS} = 2$ | 22.5 (Parameters for TVHT-MCSs) | TVHTP8.1.5:O | Yes ☐ No ☐ N/A ☐ |
| TVHTP8.1.7 | TVHT-MCS with Index 0-7 and $N_{SS} = 3$ | 22.5 (Parameters for TVHT-MCSs) | CFTVHT:O | Yes ☐ No ☐ N/A ☐ |
| TVHTP8.1.8 | TVHT-MCS with Index 0-8 and $N_{SS} = 3$ | 22.5 (Parameters for TVHT-MCSs) | TVHTP8.1.7:O | Yes ☐ No ☐ N/A ☐ |

### B.4.26.2 TVHT PHY features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| TVHTP8.3.7 | TVHT-MCS with Index 0-7 and $N_{SS} = 3$ | 22.5 (Parameters for TVHT-MCSs) | (TVHTP3.4 AND TVHTP3.5):O | Yes ☐ No ☐ N/A ☐ |
| TVHTP8.3.8 | TVHT-MCS with Index 0-8 and $N_{SS} = 3$ | 22.5 (Parameters for TVHT-MCSs) | TVHTP8.3.7:O | Yes ☐ No ☐ N/A ☐ |
| TVHTP8.3.9 | TVHT-MCS with Index 0-9 and $N_{SS} = 3$ | 22.5 (Parameters for TVHT-MCSs) | TVHTP8.3.8:O | Yes ☐ No ☐ N/A ☐ |
| TVHTP8.3.10 | TVHT-MCS with Index 0-7 and $N_{SS} = 4$ | 22.5 (Parameters for TVHT-MCSs) | (TVHTP3.4 AND TVHTP3.5):O | Yes ☐ No ☐ N/A ☐ |
| TVHTP8.3.11 | TVHT-MCS with Index 0-8 and $N_{SS} = 4$ | 22.5 (Parameters for TVHT-MCSs) | TVHTP8.3.10: O | Yes ☐ No ☐ N/A ☐ |
| TVHTP8.3.12 | TVHT-MCS with Index 0-9 and $N_{SS} = 4$ | 22.5 (Parameters for TVHT-MCSs) | TVHTP8.3.11: O | Yes ☐ No ☐ N/A ☐ |
| TVHTP9 | Space-time block coding (STBC) | 22.3.10.9.4 (Space-time block coding) | CFTVHT:O | Yes ☐ No ☐ N/A ☐ |

## B.4.27 FILS features

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| FILS1.1 | FILS Discovery frame | 11.45.2 (FILS Discovery frame generation and usage) | (CFAP OR CFSTAofAP) AND CFFILS: M | Yes ☐ No ☐ N/A ☐ |
| FILS1.2 | FILS Discovery frame | 9.6.7.36 (FILS Discovery frame format) | (CFAP OR CFSTAofAP) AND CFFILS: M | Yes ☐ No ☐ N/A ☐ |
| FILS2.1 | DILS | 11.45.5 (DILS), 9.4.2.185 (DILS element) | CFFILS: O | Yes ☐ No ☐ N/A ☐ |
| * FILS3 | ANQP procedure for FILS | 9.4.5.24 (Query AP List ANQP-element) | (CFAP OR CFSTAofAP) AND CFIW AND CFFILS: M | Yes ☐ No ☐ N/A ☐ |
| FILS3.1 | Query AP List | 9.4.5.25 (AP List Response ANQP-element) | FILS3: M | Yes ☐ No ☐ N/A ☐ |

## B.4.27 FILS features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| FILS3.2 (M118) | *Reserved* | | | |
| FILS3.3 | Common ANQP Group | 9.4.5.26 (CAG ANQP-element), 9.4.2.175 (CAG Number element) | FILS3: M | Yes ☐ No ☐ N/A ☐ |
| * FILS4 | FILS authentication | 12.11 (Authentication for FILS), 9.4 (Management and Extension frame body components), 9.4.2.177 (FILS Key Confirmation element), 9.4.2.178 (FILS Session element), 9.4.2.181 (FILS Indication element), 9.4.2.188 (FILS Nonce element) | (CFAP OR CFSTAofAP) AND CFFILS: M | Yes ☐ No ☐ N/A ☐ |
| FILS4.1 | FILS Shared Key authentication without PFS | 9.4.2.186 ((11az)Wrapped Data element), 12.11.2.3 (Key establishment with FILS Shared Key authentication) | FILS4: O.1 | Yes ☐ No ☐ N/A ☐ |
| FILS4.2 | FILS Shared Key authentication with PFS | 9.4.2.186 ((11az)Wrapped Data element), 12.11.2.3 (Key establishment with FILS Shared Key authentication) | FILS4: O | Yes ☐ No ☐ N/A ☐ |
| FILS4.3 | FILS Public Key authentication | 9.4.2.179 (FILS Public Key element), 9.4.2.187 (Fragment element), 12.11.2.4 (Key establishment with FILS Public Key authentication) | FILS4: O.1 | Yes ☐ No ☐ N/A ☐ |
| * FILS5 | Higher Layer Setup during (re)association procedure | 11.45.3 (Higher layer setup during (re)association procedure) | (CFAP OR CFSTAofAP) AND CFFILS: M | Yes ☐ No ☐ N/A ☐ |
| FILS5.1 | HLP Packet Encapsulation | 11.45.3.2 (Higher layer protocol encapsulation), 9.4.2.182 (FILS HLP Container element) | FILS5: M | Yes ☐ No ☐ N/A ☐ |
| FILS5.2 | FILS IP Address Configuration | 11.45.3.3 (FILS IP address configuration), 9.4.2.183 (FILS IP Address Assignment element) | FILS5: O | Yes ☐ No ☐ N/A ☐ |

This is an unapproved IEEE Standards Draft, subject to change.

## B.4.27 FILS features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| * FILS6 | Scanning Enhancement | 11.1.4 (Acquiring synchronization, scanning) | (CFAP OR CFSTAofAP) AND CFFILS: M | Yes ☐ No ☐ N/A ☐ |
| FILS6.1 | Probe Request Reduction | 11.1.4.3.2 (Active scanning procedure for a non-DMG STA) | FILS6: M | Yes ☐ No ☐ N/A ☐ |
| FILS6.2 | Probe Response Reduction | 11.1.4.3.4 (Criteria for sending a response), 9.4.2.176 (FILS Request Parameters element(#2193)) | FILS6: M | Yes ☐ No ☐ N/A ☐ |
| FILS6.3 | OmitReplicateProbeResponses | 11.1.4.3.9 (Contents of a probe response) | FILS6: M | Yes ☐ No ☐ N/A ☐ |
| FILS6.4 | AP Configuration Sequence Number | 9.4.2.180 (AP Configuration Sequence Number (AP-CSN) element) | FILS6: O | Yes ☐ No ☐ N/A ☐ |
| FILS6.5 | Reduced Neighbor Report | 11.49 (Reduced neighbor report), 9.4.2.169 (Reduced Neighbor Report element) | FILS6: M | Yes ☐ No ☐ N/A ☐ |

## B.4.28 Sub 1 GHz (S1G) features

### B.4.28.1 S1G MAC features

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| | Are the following MAC protocol features supported? | | | |
| S1GM1 | S1G capabilities signaling | | CFS1G:M | Yes ☐ No ☐ N/A ☐ |
| S1GM1.1 | S1G Capabilities element | 9.4.2.199 (S1G Capabilities element) | CFS1G:M | Yes ☐ No ☐ N/A ☐ |
| S1GM1.2 | Signaling of S1G capabilities in Probe Request, (Re)Association Request frames | 9.4.2.199 (S1G Capabilities element), 9.3.3.5 (Association Request frame format), 9.3.3.7 (Reassociation Request frame format), 9.3.3.9 (Probe Request frame format) | (CFIndepSTA AND CFS1G):M | Yes ☐ No ☐ N/A ☐ |

This is an unapproved IEEE Standards Draft, subject to change.

### B.4.28.1 S1G MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| S1GM1.3 | Signaling of S1G capabilities in S1G Beacon, Probe Response, (Re)Association Response frames | 9.4.2.199 (S1G Capabilities element), 9.3.4.3 (S1G Beacon frame format), 9.3.3.6 (Association Response frame format), 9.3.3.8 (Reassociation Response frame format), 9.3.3.10 (Probe Response frame format) | (CFAP AND CFS1G):M | Yes ☐ No ☐ N/A ☐ |
| S1GM2 | S1G operation | | CFS1G:M | Yes ☐ No ☐ N/A ☐ |
| S1GM2.1 | S1G Operation element | 9.4.2.211 (S1G Operation element) | CFS1G:M | Yes ☐ No ☐ N/A ☐ |
| S1GM2.2 | Signaling of S1G operation in S1G Beacon, Probe Response | 9.4.2.211 (S1G Operation element), 9.3.4.3 (S1G Beacon frame format), 9.3.3.10 (Probe Response frame format) | ((CFAP OR CFIndepSTA.2) AND CFS1G):M | Yes ☐ No ☐ N/A ☐ |
| S1GM3 | MSDU aggregation | 10.11 (A-MSDU operation), 9.2.4.5 (QoS Control field), 9.8.3.2 (Address fields), 9.3.2.2.5 (Dynamic A-MSDU format) | CFS1G:O | Yes ☐ No ☐ N/A ☐ |
| S1GM3.1 | Transmission of Dynamic A-MSDU | | CFS1G:O (CFS1G AND HTM4.4):M | Yes ☐ No ☐ N/A ☐ |
| S1GM3.2 | Reception of Dynamic A-MSDU | | CFS1G:O (CFS1G AND HTM4.1):M | Yes ☐ No ☐ N/A ☐ |
| S1GM3.3 | Transmission of Dynamic A-MSDU in PV1 frame | | (CFS1G AND HTM4.4 AND FT45):M | Yes ☐ No ☐ N/A ☐ |
| S1GM3.4 | Reception of Dynamic A-MSDU in PV1 frame | | (CFS1G AND HTM4.1 AND FT46):M | Yes ☐ No ☐ N/A ☐ |
| S1GM3.5 | Reception of Dynamic A-MSDU | | (CFS1G AND (HTM4.1 OR HTM4.4 OR S1GM3.3 OR S1GM3.4)):M | Yes ☐ No ☐ N/A ☐ |
| S1GM4 | Timing synchronization function (TSF) | | CFS1G:M | Yes ☐ No ☐ N/A ☐ |

### B.4.28.1 S1G MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| S1GM4.1 | Generation of S1G Beacon | 11.1.3.10.2 (Generation of S1G Beacon frames) | (CFAP AND CFS1G): M | Yes ☐ No ☐ N/A ☐ |
| S1GM4.1.1 | S1G Beacon generation at TBTT | | (CFAP AND CFS1G): M | |
| S1GM4.1.2 | S1G Beacon generation at TSBTT | | (CFAP AND CFS1G): O | Yes ☐ No ☐ N/A ☐ |
| S1GM4.1.3 | S1G Beacon reception at TBTT | | (CFIndepSTA AND CFS1G): M | Yes ☐ No ☐ N/A ☐ |
| S1GM4.1.4 | S1G Beacon reception at TSBTT | | (CFIndepSTA AND CFS1G): M | Yes ☐ No ☐ N/A ☐ |
| S1GM4.2 | TSF timer accuracy with S1G Beacon | 11.1.3.10.3 (TSF timer accuracy with S1G Beacon frame) | CFS1G: M | Yes ☐ No ☐ N/A ☐ |
| S1GM4.3 | TSF timer accuracy with TACK, STACK, BAT, PV1 Probe Response frames | | CFS1G: O | Yes ☐ No ☐ N/A ☐ |
| S1GM4.4 | Signaling PV1 Probe Response Option element in Probe Request frame | | CFS1G: O | Yes ☐ No ☐ N/A ☐ |
| S1GM4.5 | Active scanning using NDP Probe Request frame | 11.1.4.3.6 (NDP Probing) | CFS1G: O | Yes ☐ No ☐ N/A ☐ |
| S1GM4.6 | Sending PV1 Probe Response frame | 11.1.4.3.7 (Active scanning using PV1 Probe Response), 11.1.4.3.6 (NDP Probing) | (CFAP AND CFS1G): O | Yes ☐ No ☐ N/A ☐ |
| S1GM5 | Reverse direction protocol | 10.29 (Reverse direction protocol) | CFS1G:O | Yes ☐ No ☐ N/A ☐ |
| S1GM5.1 | Initiation of RD protocol | | CFS1G:O | Yes ☐ No ☐ N/A ☐ |
| S1GM5.2 | Response to RD request | | CFS1G:O | Yes ☐ No ☐ N/A ☐ |
| *S1GM6 | Target wake time (TWT) operation | 10.46 (Target wake time (TWT)) | CFS1G:O | Yes ☐ No ☐ N/A ☐ |
| *S1GM6.1 | Assume the role of TWT requesting STA | 10.46.1 (TWT overview) | S1GM6:O.1 | Yes ☐ No ☐ N/A ☐ |
| *S1GM6.2 | Assume the role of TWT responding STA | 10.46.1 (TWT overview) | S1GM6:O.1 | Yes ☐ No ☐ N/A ☐ |
| S1GM6.3 | Request TWT Setup | 10.46.1 (TWT overview) | S1GM6.1:O | Yes ☐ No ☐ N/A ☐ |
| S1GM6.4 | Response to TWT Setup request | 10.46.1 (TWT overview) | S1GM6.2:M | Yes ☐ No ☐ N/A ☐ |

### B.4.28.1 S1G MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| S1GM6.5 | TWT Teardown | 10.46.8 (TWT teardown) | S1GM6:O | Yes ☐ No ☐ N/A ☐ |
| S1GM6.6 | TWT acknowledgment procedure | 10.46.2 (TWT acknowledg-ment proce-dure) | S1GM6:M | Yes ☐ No ☐ N/A ☐ |
| S1GM6.7 | Explicit TWT operation | 10.46.3 (Explicit TWT operation) | S1GM6:O.2 | Yes ☐ No ☐ N/A ☐ |
| S1GM6.8 | Implicit TWT operation | 10.46.4 (Implicit TWT operation) | S1GM6:O.2 | Yes ☐ No ☐ N/A ☐ |
| S1GM6.9 | Request NDP paging setup(#8182) | 10.46.6 (NDP paging setup) | S1GM6.1:O | Yes ☐ No ☐ N/A ☐ |
| S1GM6.10 | Accept the NDP paging setup request(#8182) | 10.46.6 (NDP paging setup) | S1GM6.2:O | Yes ☐ No ☐ N/A ☐ |
| S1GM6.11 | Schedule NDP Paging frame as the first frame in a TWT | | S1GM10:M | Yes ☐ No ☐ N/A ☐ |
| S1GM6.12 | TWT grouping | 10.46.5 (TWT grouping) | S1GM6:O | Yes ☐ No ☐ N/A ☐ |
| S1GM6.13 | Protected TWT Operations | 10.46.1 (TWT overview) | (PC 34.1.10 AND S1GM6):O | Yes ☐ No ☐ N/A ☐ |
| S1GM7 | Non-TIM operation | 10.47 (Non-TIM opera-tion) | (CFIndepSTA AND CFS1G):O (CFAP AND CFS1G AND (S1GM20.1 OR S1GM20.3)): M | Yes ☐ No ☐ N/A ☐ |
| S1GM7.1 | Request non-TIM Mode | 11.2.3.2 (Non-AP STA power man-agement modes) | (CFIndepSTA AND S1GM7):O | Yes ☐ No ☐ N/A ☐ |
| S1GM7.2 | Response to non-TIM Mode request | 11.2.3.2 (Non-AP STA power man-agement modes) | (CFAP AND S1GM7):M | Yes ☐ No ☐ N/A ☐ |
| S1GM7.3 | Request rescheduling of awake/ doze cycle | 10.47.2 (Reschedul-ing of awake/ doze cycle) | (CFIndepSTA AND S1GM7):O | Yes ☐ No ☐ N/A ☐ |
| S1GM7.4 | Reschedule awake/doze cycle of S1G STAs in non-TIM mode | 10.47.2 (Reschedul-ing of awake/ doze cycle) | (CFAP AND S1GM7):O | Yes ☐ No ☐ N/A ☐ |

### B.4.28.1 S1G MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| S1GM7.5 | Temporary PS Mode Switch to TIM mode | 10.47.2 (Rescheduling of awake/doze cycle) | (CFIndepSTA AND S1GM7):O | Yes ☐ No ☐ N/A ☐ |
| S1GM7.6 | Listen interval update procedure for S1G STAs in non-TIM mode | | S1GM7:O | Yes ☐ No ☐ N/A ☐ |
| S1GM7.7 | Resource protection for S1G STAs in non-TIM mode | 10.47.1 (Resource protection for S1G STAs in non-TIM mode) | (CFAP AND S1GM7):O | Yes ☐ No ☐ N/A ☐ |
| S1GM7.8 | Resource protection for S1G STAs in non-TIM mode using periodic RAW (PRAW) operation | 10.47.1.2 (Resource protection for S1G STAs in non-TIM mode using periodic RAW (PRAW) operation) | (CFAP AND S1GM7):O | Yes ☐ No ☐ N/A ☐ |
| S1GM8 | Sync frame operation | 10.48 (Sync frame operation) | CFS1G:O | Yes ☐ No ☐ N/A ☐ |
| S1GM8.1 | Request for a sync frame transmission | 10.48 (Sync frame operation) | (CFIndepSTA AND S1GM8):O | Yes ☐ No ☐ N/A ☐ |
| S1GM8.2 | Schedule a sync frame transmission | 10.48 (Sync frame operation) | (CFAP AND S1GM8):M | Yes ☐ No ☐ N/A ☐ |
| S1GM8.3 | Request for time slot protection | 10.48 (Sync frame operation) | (CFIndepSTA AND S1GM8):O | Yes ☐ No ☐ N/A ☐ |
| S1GM8.4 | Protect the time slot assigned to the STA that requested for time slot protection. | 10.48 (Sync frame operation) | (CFAP AND S1GM8):M | Yes ☐ No ☐ N/A ☐ |
| S1GM8.5 | Respond to sync frame | 10.48 (Sync frame operation) | (CFIndepSTA AND S1GM8):M | Yes ☐ No ☐ N/A ☐ |
| S1GM9 | Bidirectional TXOP | 10.49 (Bidirectional TXOP) | CFS1G:O | Yes ☐ No ☐ N/A ☐ |
| S1GM9.1 | Act as BDT Initiator | 10.49.2 (Rules for BDT) | S1GM9:O | Yes ☐ No ☐ N/A ☐ |
| S1GM9.2 | Act as BDT Responder | | S1GM9:M | Yes ☐ No ☐ N/A ☐ |
| S1GM10 | Subchannel Selective Transmission (SST) | 10.49 (Bidirectional TXOP) | CFS1G:O | Yes ☐ No ☐ N/A ☐ |
| S1GM11 | Sectorized beam operation | 10.52 (Sectorized beam operation) | CFS1G:O | Yes ☐ No ☐ N/A ☐ |

### B.4.28.1 S1G MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| S1GM11.1 | Support for Group Sectorization Operation | 10.52.3 (Group sectorization operation) | (CFAP AND S1GM11):O.3 (CFIndepSTA AND S1GM11):M | Yes ☐ No ☐ N/A ☐ |
| S1GM11.2 | Support for TXOP-based Sectorization Operation | 10.52.4 (TXOP-based sectorization operation) | (CFAP AND S1GM11):O.3 (CFIndepSTA AND S1GM11):M | Yes ☐ No ☐ N/A ☐ |
| S1GM11.3 | Transmission of S1G Sector Operation element with Sectorization Type field equal to 0 | 10.52.2 (Sector Capabilities Exchange) | (CFAP AND S1GM11.1):M | Yes ☐ No ☐ N/A ☐ |
| S1GM11.4 | Transmission of S1G Sector Operation element with Sectorization Type field equal to 1 | 10.52.2 (Sector Capabilities Exchange) | (CFAP AND S1GM11.2):M | Yes ☐ No ☐ N/A ☐ |
| S1GM11.5 | Sector training operation | 10.52.2 (Sector Capabilities Exchange) | S1GM11:O | Yes ☐ No ☐ N/A ☐ |
| S1GM11.6 | Send back Sector ID feedback to associated AP | 10.52.2 (Sector Capabilities Exchange) | (CFIndepSTA AND S1GM11):O | Yes ☐ No ☐ N/A ☐ |
| S1GM12 | 1 MHz Control Response Preamble Support | 10.6.6.6 (Channel Width selection for Control frames) | CFS1G: O | Yes ☐ No ☐ N/A ☐ |
| *S1GM13 | Group AID | 10.54 (Group AID) | CFS1G:O | Yes ☐ No ☐ N/A ☐ |
| S1GM14 | Traveling Pilot Operation | 10.55 (Traveling pilot operation) | CFS1G:O | Yes ☐ No ☐ N/A ☐ |
| S1GM15 | Bitmap Protection for NDP BlockAck frames | 10.56 (Bitmap protection for NDP BlockAck frames) | (CFS1G AND (FT47 OR FR 48)): M | Yes ☐ No ☐ N/A ☐ |
| S1GM16 | Header compression procedure | 10.57 (Generation of PV1 MPDUs and header compression procedure) | CFS1G:O | Yes ☐ No ☐ N/A ☐ |
| S1GM16.1 | Signaling Header Compression element in (Re)Association Request frames | 10.57 (Generation of PV1 MPDUs and header compression procedure) | (CFIndepSTA AND S1GM16):O | Yes ☐ No ☐ N/A ☐ |

### B.4.28.1 S1G MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| S1GM16.2 | Signaling Header Compression element in (Re)Association Response frames | 10.57 (Generation of PV1 MPDUs and header compression procedure) | (CFAP AND S1GM16):M | Yes ☐ No ☐ N/A ☐ |
| S1GM16.3 | Request header compression procedure | | S1GM16:O | Yes ☐ No ☐ N/A ☐ |
| S1GM16.4 | Store the optional fields indicated in the Header Compression frame request | | S1GM16:O | Yes ☐ No ☐ N/A ☐ |
| S1GM16.5 | Send back the Header Compression frame response | | CFS1G:M | Yes ☐ No ☐ N/A ☐ |
| S1GM17 | Flow control | 10.60 (S1G flow control) | CFS1G:M | Yes ☐ No ☐ N/A ☐ |
| S1GM17.1 | Request flow suspension/resumption | 10.60 (S1G flow control) | CFS1G:O | Yes ☐ No ☐ N/A ☐ |
| S1GM17.2 | Flow suspension in response to a(#375) Flow Suspension frame or NDP ACK frame | 10.60 (S1G flow control) | (CFIndepSTA AND CFS1G):M | Yes ☐ No ☐ N/A ☐ |
| S1GM17.3 | Flow suspension in response to a(#375) STACK or BAT or TACK frame | | (CFIndepSTA AND S1GM6.6):M | Yes ☐ No ☐ N/A ☐ |
| S1GM17.4 | Flow resumption upon receiving a Flow Resumption frame | | (CFIndepSTA AND CFS1G):O | Yes ☐ No ☐ N/A ☐ |
| *S1GM18 | Dynamic AID assignment operation | 10.20 (S1G dynamic AID assignment operation) | CFS1G:O | Yes ☐ No ☐ N/A ☐ |
| S1GM18.1 | Request AID switch | 10.20 (S1G dynamic AID assignment operation) | (CFIndepSTA AND S1GM18):O | Yes ☐ No ☐ N/A ☐ |
| S1GM18.2 | Respond to request for AID switch | 10.20 (S1G dynamic AID assignment operation) | (CFAP AND S1GM18):M | Yes ☐ No ☐ N/A ☐ |
| S1GM18.3 | Issue unsolicited AID switch instruction | 10.20 (S1G dynamic AID assignment operation) | (CFAP AND S1GM18):O | Yes ☐ No ☐ N/A ☐ |
| S1GM18.4 | Respond to unsolicited AID switch instruction | 10.20 (S1G dynamic AID assignment operation) | (CFIndepSTA AND S1GM18):O | Yes ☐ No ☐ N/A ☐ |

### B.4.28.1 S1G MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| S1GM19 | System information update procedure | 10.45.2 (System information update procedure) | CFS1G:M | Yes ☐ No ☐ N/A ☐ |
| S1GM19.1 | Update the Change Sequence field in S1G Beacon frame | | (CFAP AND CFS1G):M | Yes ☐ No ☐ N/A ☐ |
| S1GM19.2 | Respond to changes in the Change Sequence field in S1G Beacon frame | | (CFIndepSTA AND CFS1G):M | Yes ☐ No ☐ N/A ☐ |
| S1GM19.3 | Respond to probe request frames that contain the Change Sequence field | | (CFAP AND CFS1G):O | Yes ☐ No ☐ N/A ☐ |
| S1GM20 | STA types | 10.62 (S1G BSS type and STA type) | CFS1G:M | Yes ☐ No ☐ N/A ☐ |
| S1GM20.1 | Support for sensor STA | 10.62 (S1G BSS type and STA type) | (CFAP AND CFS1G):O.5 | Yes ☐ No ☐ N/A ☐ |
| S1GM20.2 | Support for non-sensor STA | 10.62 (S1G BSS type and STA type) | (CFAP AND CFS1G):O.5 | Yes ☐ No ☐ N/A ☐ |
| S1GM20.3 | Support for both sensor and non-sensor STA | 10.62 (S1G BSS type and STA type) | (CFAP AND CFS1G):O.5 | Yes ☐ No ☐ N/A ☐ |
| S1GM20.4 | Assume the role of sensor STA | 10.62 (S1G BSS type and STA type) | (CFIndepSTA AND CFS1G):O.6 | Yes ☐ No ☐ N/A ☐ |
| S1GM20.5 | Assume the role of non-sensor STA | 10.62 (S1G BSS type and STA type) | (CFIndepSTA AND CFS1G):O.6 | Yes ☐ No ☐ N/A ☐ |
| S1GM21 | Support for energy limited STAs | 11.46 (Support for energy limited STAs) | (CFAP AND CFS1G AND (S1GM20.1 OR S1GM20.3)):M (CFAP AND S1GM20.2):O (CFIndepSTA AND S1GM20.4):O | Yes ☐ No ☐ N/A ☐ |
| S1GM22 | S1G Channel Access | | CFS1G: M | Yes ☐ No ☐ N/A ☐ |
| S1GM22.1 | Response indication deferral (RID) function | 10.3.2.1 (CS mechanism), 10.3.2.4 (Setting and resetting the NAV), 10.3.2.5 (Setting and resetting the RID), 10.3.2.17 (Response Indication procedure) | CFS1G: M | Yes ☐ No ☐ N/A ☐ |

### B.4.28.1 S1G MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| S1GM22.2 | Dynamic bandwidth operation | 10.3.2.7 (VHT and S1G RTS procedure) | CFS1G: O | Yes ☐ No ☐ N/A ☐ |
| S1GM22.3 | Fragment BA | 10.3.2.12 (Fragment BA procedure) | CFS1G: O | Yes ☐ No ☐ N/A ☐ |
| S1GM22.4 | Support for at least one transmit queue with AC_BE access category | 10.2.3.2 (HCF contention based channel access (EDCA)), 10.23.2.1 (Reference model) | S1GM20.4: M | Yes ☐ No ☐ N/A ☐ |
| S1GM22.5 | Restricted Access Window (RAW) Operation | 10.23.5 (Restricted access window (RAW) operation) | CFS1G:O | Yes ☐ No ☐ N/A ☐ |
| S1GM22.5.1 | EDCA backoff procedure in generic RAW or triggering frame RAW | 10.23.5.5 (EDCA backoff procedure in generic RAW or triggering frame RAW) | (CFAP AND S1GM22.5):O (CFIndepSTA AND S1GM22.5):M | Yes ☐ No ☐ N/A ☐ |

### B.4.28.2 S1G PHY features

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| | Are the following PHY protocol features supported? | | | |
| S1GP1 | BSS bandwidth | | | |
| S1GP1.1 | 1 MHz operation | 10.45.1 (Basic S1G BSS functionality), 23.1.1 (Introduction to the S1G PHY) | CFS1G: M | Yes ☐ No ☐ N/A ☐ |
| S1GP1.2 | 2 MHz operation | 10.45.1 (Basic S1G BSS functionality), 23.1.1 (Introduction to the S1G PHY) | CFS1G: M | Yes ☐ No ☐ N/A ☐ |
| S1GP1.3 | 4 MHz operation | 10.45.1 (Basic S1G BSS functionality), 23.1.1 (Introduction to the S1G PHY) | CFS1G: O | Yes ☐ No ☐ N/A ☐ |
| S1GP1.4 | 8 MHz operation | 10.45.1 (Basic S1G BSS functionality), 23.1.1 (Introduction to the S1G PHY) | CFS1G: O | Yes ☐ No ☐ N/A ☐ |
| S1GP1.5 | 16 MHz operation | 10.45.1 (Basic S1G BSS functionality), 23.1.1 (Introduction to the S1G PHY) | CFS1G: O | Yes ☐ No ☐ N/A ☐ |
| S1GP2 | Coding scheme | | | |
| S1GP2.1 | Use of BCC code | 23.1.1 (Introduction to the S1G PHY), 23.3.4 (Overview of the PPDU encoding process) | CFS1G: M | Yes ☐ No ☐ N/A ☐ |
| S1GP2.2 | Use of STBC code | 23.1.1 (Introduction to the S1G PHY), 23.3.4 (Overview of the PPDU encoding process) | CFS1G: O | Yes ☐ No ☐ N/A ☐ |

### B.4.28.2 S1G PHY features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| S1GP2.3 | Use of LDPC code | 23.1.1 (Introduction to the S1G PHY), 23.3.4 (Overview of the PPDU encoding process) | CFS1G: O | Yes ☐ No ☐ N/A ☐ |
| S1GP3 | Demodulation scheme | | | |
| S1GP3.1 | SIG-A of greater than or equal to 2 MHz long preamble format PPDU | 23.1.1 (Introduction to the S1G PHY), 23.3.4.2.3 (Construction of SIG-A) | CFS1G: M | Yes ☐ No ☐ N/A ☐ |
| S1GP4 | PHY timing parameters | | | |
| S1GP4.1 | Normal (long) guard interval | 23.1.1 (Introduction to the S1G PHY), 23.3.6 (Timing-related parameters) | CFS1G: M | Yes ☐ No ☐ N/A ☐ |
| S1GP4.2 | Short guard interval | 23.1.1 (Introduction to the S1G PHY), 23.3.6 (Timing-related parameters) | CFS1G: O | Yes ☐ No ☐ N/A ☐ |
| S1GP5 | Use of S1G beamforming | 23.1.1 (Introduction to the S1G PHY), 23.3.10 (SU-MIMO and (#3367)DL MU-MIMO Beamforming) | CFS1G: O | Yes ☐ No ☐ N/A ☐ |
| S1GP6 | PPDU format | | | |
| S1GP6.1 | 1 MHz short preamble format PPDU | 23.1.1 (Introduction to the S1G PHY), 23.3.2 (S1G PPDU format) | CFS1G: M | Yes ☐ No ☐ N/A ☐ |
| S1GP6.2 | 2 MHz short preamble format PPDU | 23.1.1 (Introduction to the S1G PHY), 23.3.2 (S1G PPDU format) | CFS1G: M | Yes ☐ No ☐ N/A ☐ |
| S1GP6.3 | Greater than 2 MHz short preamble format PPDU | 23.1.1 (Introduction to the S1G PHY), 23.3.2 (S1G PPDU format) | CFS1G: O | Yes ☐ No ☐ N/A ☐ |

## B.4.29 S1G relay features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| RL6.2 | Implicit Ack procedure | 10.53.3 (Addressing and for-warding of individually addressed relay frames) | RL6:O.4 | Yes ☐ No ☐ N/A ☐ |
| RL7 | S1G relay discovery procedure | 10.53.6 (S1G relay discovery procedure), 11.1.4.3.5 (Active scanning for relay dis-covery) | (CFS1G AND RL1):O CFAP: O CFIndepSTA: O | Yes ☐ No ☐ N/A ☐ |

## B.4.30 CDMG features(#2293)

### B.4.30.1 CDMG MAC features

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| | Are the following MAC protocol features supported? | | | |
| CDMG-M1 | CDMG capabilities signaling | | | |
| CDMG-M1.1 | CDMG Capabilities element | 9.4.2.218 (CDMG Capabilities element) | CFCDMG:M | Yes ☐ No ☐ N/A ☐ |
| CDMG-M1.2 | Signaling of STA capabilities in Probe Request and (Re)Association Request frames | 9.3.3.5 (Association Request frame for-mat), 9.3.3.7 (Reassocia-tion Request frame format), 9.3.3.9 (Probe Request frame for-mat), 9.4.2.218 (CDMG Capabilities element) | (CFCDMG AND (CFSTAofAP OR CFIBSS OR CFPBSSnot PCP)):M | Yes ☐ No ☐ N/A ☐ |

### B.4.30.1 CDMG MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| CDMG-M1.3 | Signaling of STA and BSS capabilities in DMG Beacon, Probe Response, and (Re)Association Response frames | 9.3.3.6 (Association Response frame format), 9.3.3.8 (Reassociation Response frame format), 9.3.3.10 (Probe Response frame format), 9.3.4.2 (DMG Beacon), 9.4.2.218 (CDMG Capabilities element) | (CFCDMG AND (CFAP OR CFPCP)):M | Yes ☐ No ☐ N/A ☐ |
| CDMG-M2 | Dynamic bandwidth control | 9.3.4.2 (DMG Beacon), 10.63 (DBC mechanism for CDMG STAs) | CFCDMG:M | Yes ☐ No ☐ N/A ☐ |
| CDMG-M3 | Dynamic channel selection | 11.47 (DCS procedure for CDMG BSS), 9.6.7.37 (DCS Measurement Request frame format), 9.6.7.38 (DCS Measurement Response frame format), 9.6.7.39 (DCS Request frame format), 9.6.7.40 (DCS Response frame format) | CFCDMG:O | Yes ☐ No ☐ N/A ☐ |
| CDMG-M4 | Opportunistic transmissions | 9.4.1.7 (Reason Code field), 9.4.2.228 (CMMG Capabilities element), 10.38.11 (Opportunistic transmission in alternative channel for CDMG STAs) | CFCDMG:O | Yes ☐ No ☐ N/A ☐ |
| CDMG-M5 | Selection of candidate SPs for spatial sharing | 9.4.2.221 (SSW Report element), 11.30.1 (General), W.1 (Selection of candidate SPs for spatial sharing) | CFCDMG:O | Yes ☐ No ☐ N/A ☐ |
| CDMG-M6 | CDMG AP or PCP clustering | 10.39 (DMG and CMMG AP or PCP clustering) | CFCDMG:M | Yes ☐ No ☐ N/A ☐ |
| CDMG-M7 | CDMG protected period establishment and maintenance | 10.38.6.6.3 (CDMG protected period establishment and maintenance) | CFCDMG:M | Yes ☐ No ☐ N/A ☐ |

This is an unapproved IEEE Standards Draft, subject to change.

### B.4.30.1 CDMG MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| CDMG-M8 | Spatial sharing in a CDMG AP or PCP cluster | 10.40.6 (Spatial sharing in a CDMG AP or PCP cluster) | CFCDMG:M | Yes ☐ No ☐ N/A ☐ |
| CDMG-M9 | CDMG enhanced beam tracking | 10.41.9 (CDMG enhanced beam tracking), W.3 (Beam tracking and switching for enhanced beam tracking mechanism) | CFCDMG:O | Yes ☐ No ☐ N/A ☐ |
| CDMG-M10 | CDMG dynamic truncation of service period | 10.38.8.2 (CDMG dynamic truncation of service period) | CFCDMG:M | Yes ☐ No ☐ N/A ☐ |

### B.4.30.2 CDMG PHY features

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| | Are the following PHY protocol features supported? | | | |
| CDMG-P1 | PHY operating modes | | | |
| CDMG-P1.1 | Operation according to Clause 24 (China directional multi-gigabit (CDMG) PHY specification) | Clause 24 (China directional multi-gigabit (CDMG) PHY specification) | CFCDMG:M | Yes ☐ No ☐ N/A ☐ |
| CDMG-P2 | CDMG PHY frame format | | | |
| (M118)*CDMG-P2.1 | CDMG control mode format | 24.4 (CDMG control mode) | CFCDMG:M | Yes ☐ No ☐ N/A ☐ |
| (M118)*CDMG-P2.2 | CDMG SC mode format | 24.5 (CDMG SC mode) | CFCDMG:M | Yes ☐ No ☐ N/A ☐ |
| (M118)*CDMG-P2.3 | CDMG low-power SC mode format. The CDMG low-power SC mode is obsolete. Support for this mechanism might be removed in a later revision of the standard. | 24.6 (CDMG low-power SC mode) | CFCDMG:O | Yes ☐ No ☐ N/A ☐ |
| CDMG-P2.4 | Modulation and coding schemes (MCSs) | 24.4 (CDMG control mode)(#2294) | | Yes ☐ No ☐ N/A ☐ |
| CDMG-P2.4.1 | MCS 0 of CDMG control mode | 24.4 (CDMG control mode)(#2294) | CDMG-P2.1:M | Yes ☐ No ☐ N/A ☐ |
| CDMG-P2.4.2 | MCSs 1 to 16 of CDMG SC mode | 24.5 (CDMG SC mode)(#2294) | | Yes ☐ No ☐ N/A ☐ |
| CDMG-P2.4.2.1 | MCSs 1 to 9 | 24.5 (CDMG SC mode)(#2294) | CDMG-P2.2:M | Yes ☐ No ☐ N/A ☐ |

This is an unapproved IEEE Standards Draft, subject to change.

### B.4.30.2 CDMG PHY features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| CDMG-P2.4.2.2 | MCSs 10 to 16 | 24.5 (CDMG SC mode)(#2294) | CDMG-P2.2:O | Yes ☐ No ☐ N/A ☐ |
| CDMG-P2.4.3 | MCSs 17 to 23 of CDMG low-power SC mode. The CDMG low-power SC mode is obsolete. Support for this mechanism might be removed in a later revision of the standard. | 24.6 (CDMG low-power SC mode) | CDMG-P2.3:M | Yes ☐ No ☐ N/A ☐ |
| CDMG-P2.5 | Common preamble format | 24.3 (Common parameters) | CFCDMG:M | Yes ☐ No ☐ N/A ☐ |
| CDMG-P2.6 | Enhanced mobile device support mode | 24.5 (CDMG SC mode) | CFCDMG:M | Yes ☐ No ☐ N/A ☐ |

## B.4.31 CMMG features

### B.4.31.1 CMMG PHY features

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| | Are the following PHY protocol features supported? | | | |
| CMMG-P1 | PHY operating modes | | | |
| CMMG-P1.1 | Operation according to Clause 25 (China millimeter-wave multi-gigabit (CMMG) PHY specification) | Clause 25 (China millimeter-wave multi-gigabit (CMMG) PHY specification) | CFCMMG:M | |

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

### B.4.31.1 CMMG PHY features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| CMMG-P2 | PHY frame format | | | |
| (M118)*CMMG-P2.1 | CMMG control mode format | 25.4 (CMMG control mode) | CFCMMG:M | Yes ☐ No ☐ N/A ☐ |
| (M118)*CMMG-P2.2 | CMMG SC mode format | 25.5 (CMMG SC mode) | CFCMMG:M | Yes ☐ No ☐ N/A ☐ |
| (M118)*CMMG-P2.3 | CMMG OFDM mode format | 25.6 (CMMG OFDM mode) | CFCMMG:O | Yes ☐ No ☐ N/A ☐ |
| CMMG-P2.4 | Modulation and coding schemes (MCSs) | | | |
| CMMG-P2.4.1 | MCS 0 of CMMG control mode | 25.4 (CMMG control mode) | CMMG-P2.1:M | Yes ☐ No ☐ N/A ☐ |
| CMMG-P2.4.2 | MCSs 1 to 8 of CMMG SC mode | | | |
| CMMG-P2.4.2.1 | MCSs 1 to 3 | 25.5 (CMMG SC mode) | CMMG-P2.2:M | Yes ☐ No ☐ N/A ☐ |
| CMMG-P2.4.2.2 | MCSs 4 to 8 | 25.5 (CMMG SC mode) | CMMG-P2.2:O | Yes ☐ No ☐ N/A ☐ |
| CMMG-P2.4.3 | MCSs 9 to 16 of CMMG OFDM mode | 25.6 (CMMG OFDM mode) | CMMG-P2.3:M | Yes ☐ No ☐ N/A ☐ |

### B.4.32 Preassociation discovery extensions

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| *PAD1 | Unsolicited PAD procedure | 11.23.2 (Unsolicited PAD procedure) | CFPAD:M | Yes ☐ No ☐ N/A ☐ |
| PAD1.1 | Service Hint element | 9.4.2.236 (Service Hint element) | PAD1:M | Yes ☐ No ☐ N/A ☐ |
| PAD1.2 | Service Hash element | 9.4.2.237 (Service Hash element) | PAD1:M | Yes ☐ No ☐ N/A ☐ |
| *PAD2 | Solicited PAD procedure | 11.23.3 (Solicited PAD procedure) | (CFPAD AND IW2.2.2):M | Yes ☐ No ☐ N/A ☐ |
| PAD2.1 | (M118)Service information request | 9.4.5.27 (Service Information Request ANQP-element) | PAD2:M | Yes ☐ No ☐ N/A ☐ |
| PAD2.2 | (M118)Service information response | 9.4.5.28 (Service Information Response ANQP-element) | PAD2:M | Yes ☐ No ☐ N/A ☐ |

### B.4.33 High-efficiency (HE) features(11ax)

#### B.4.33.1 HE MAC features

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| | Are the following MAC protocol features supported? | | | |
| HEM1 | HE capabilities signaling | | | |
| HEM1.1 | HE Capabilities element | 9.4.2.247 (HE Capabilities element(11ax)) | CFHE:M | Yes ☐ No ☐ N/A ☐ |

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

### B.4.33.1 HE MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| HEM1.2 | Signaling of STA capabilities in Probe Request, (Re)Association Request frames | 9.3.3.5 (Association Request frame format), 9.3.3.7 (Reassociation Request frame format), 9.3.3.9 (Probe Request frame format), 9.4.2.247 (HE Capabilities element(11ax)) | (CFHE AND CFIndepSTA): M | Yes ☐ No ☐ N/A ☐ |
| HEM1.3 | Signaling of HE STA capabilities and HE BSS capabilities in Beacon, Probe Response, (Re)Association Response frames | 9.3.3.2 (Beacon frame format), 9.3.3.6 (Association Response frame format), 9.3.3.8 (Reassociation Response frame format), 9.3.3.10 (Probe Response frame format), 9.4.2.247 (HE Capabilities element(11ax)) | (CFHE AND CFAP):M | Yes ☐ No ☐ N/A ☐ |
| HEM2 | Signaling of HE operation | 9.4.2.248 (HE Operation element(11ax)) | (CFHE AND CFAP):M | Yes ☐ No ☐ N/A ☐ |
| HEM3 | A-MPDU with multiple TIDs | 26.6.3 (Multi-TID A-MPDU and ack-enabled single-TID A-MPDU) | CFHE:O | Yes ☐ No ☐ N/A ☐ |
| HEM4 | HE variant HT Control | | | |
| HEM4.1 | UL MU Response Scheduling | 9.2.4.7.1 (TRS Control) | CFHE:O | Yes ☐ No ☐ N/A ☐ |
| HEM4.2 | Operating Mode | 9.2.4.7.2 (OM Control) | CFHE:O | Yes ☐ No ☐ N/A ☐ |
| HEM4.3 | HE Link Adaptation | 9.2.4.7.3 (HLA Control) | CFHE:O | Yes ☐ No ☐ N/A ☐ |
| HEM4.4 | Buffer Status Report | 9.2.4.7.4 (BSR Control) | CFHE:O | Yes ☐ No ☐ N/A ☐ |
| HEM4.5 | UL Power Headroom | 9.2.4.7.5 (UPH Control) | CFHE:M | Yes ☐ No ☐ N/A ☐ |
| HEM4.6 | BQR Control | 9.2.4.7.6 (BQR Control) | CFHE:O | Yes ☐ No ☐ N/A ☐ |
| HEM4.7 | CAS Control | 9.2.4.7.7 (CAS Control) | CFHE:O | Yes ☐ No ☐ N/A ☐ |
| HEM5 | Trigger frame | | | |

This is an unapproved IEEE Standards Draft, subject to change.

### B.4.33.1 HE MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| HEM5.1 | Basic Trigger frame | 9.3.1.22.2 (Basic Trigger frame format) | CFHE:M | Yes ☐ No ☐ N/A ☐ |
| HEM5.2 | BFRP Trigger frame | 9.3.1.22.3 (BFRP Trigger frame format) | CFHE:M | Yes ☐ No ☐ N/A ☐ |
| HEM5.3 | MU-BAR Trigger frame | 9.3.1.22.4 (MU-BAR Trigger frame format) | CFHE:O | Yes ☐ No ☐ N/A ☐ |
| HEM5.4 | MU-RTS Trigger frame transmission | 9.3.1.22.5 (MU-RTS Trigger frame format) | CFHE:O | Yes ☐ No ☐ N/A ☐ |
| HEM5.5 | MU-RTS Trigger frame reception | 9.3.1.22.5 (MU-RTS Trigger frame format) | CFHE:M | Yes ☐ No ☐ N/A ☐ |
| HEM5.6 | BSRP Trigger frame | 9.3.1.22.6 (BSRP Trigger frame format) | CFHE:O | Yes ☐ No ☐ N/A ☐ |
| HEM5.7 | GCR MU-BAR Trigger frame | 9.3.1.22.7 (GCR MU-BAR Trigger frame format) | CFHE:O | Yes ☐ No ☐ N/A ☐ |
| HEM5.8 | BQRP Trigger frame | 9.3.1.22.8 (BQRP Trigger frame format) | CFHE:O | Yes ☐ No ☐ N/A ☐ |
| HEM5.9 | NFRP Trigger frame | 9.3.1.22.9 (NFRP Trigger frame format) | CFHE:O | Yes ☐ No ☐ N/A ☐ |
| HEM6 | Transmit beamforming | | | |
| *HEM6.1 | SU beamformer capable if the supported maximum number of transmit spatial streams is less than 4 | 9.4.2.247 (HE Capabilities element(11ax)) | CFHE:O | Yes ☐ No ☐ N/A ☐ |
| *HEM6.2 | SU beamformer capable if the supported maximum number of transmit spatial streams is greater than or equal to 4 | 9.4.2.247 (HE Capabilities element(11ax)) | CFHE:M | Yes ☐ No ☐ N/A ☐ |
| *HEM6.3 | SU beamformee capable | 9.4.2.247 (HE Capabilities element(11ax)) | CFHE:O | Yes ☐ No ☐ N/A ☐ |
| *HEM6.4 | MU beamformer capable if the supported maximum number of transmit spatial streams is less than 4 | 9.4.2.247 (HE Capabilities element(11ax)) | CFAP AND (M118)HEM6.1:O | Yes ☐ No ☐ N/A ☐ |
| *HEM6.5 | MU beamformer capable if the supported maximum number of transmit spatial streams is greater than or equal to 4 | 9.4.2.247 (HE Capabilities element(11ax)) | CFAP AND (M118)HEM6.2:M | Yes ☐ No ☐ N/A ☐ |
| *HEM6.6 | MU beamformee capable | 9.4.2.247 (HE Capabilities element(11ax)) | CFIndepSTA AND VHTM7.2: O | Yes ☐ No ☐ N/A ☐ |

### B.4.33.1 HE MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| HEM6.7 | Transmission of an HE sounding NDP | 26.7 (HE sounding operation(#2388)) | HEM6.1:M HEM6.2:M | Yes ☐ No ☐ N/A ☐ |
| HEM6.8 | Reception of an HE sounding NDP | 26.7 (HE sounding operation(#2388)) | HEM6.3:M | Yes ☐ No ☐ N/A ☐ |
| *HEM6.9 | Transmission of Trigger frame | 26.7 (HE sounding operation(#2388)) | HEM6.1:O HEM6.2:O | Yes ☐ No ☐ N/A ☐ |
| HEM6.10 | Reception of Trigger frame | 26.7 (HE sounding operation(#2388)) | HEM6.9:M | Yes ☐ No ☐ N/A ☐ |
| HEM7 | Sounding protocol | | | |
| HEM7.1 | HE Sounding Protocol as SU beamformer | 26.7 (HE sounding operation(#2388)) | HEM6.1:M HEM6.2:M | Yes ☐ No ☐ N/A ☐ |
| HEM7.2 | HE Sounding Protocol as SU beamformee | 26.7 (HE sounding operation(#2388)) | HEM6.3:M | Yes ☐ No ☐ N/A ☐ |
| HEM7.3 | HE Sounding Protocol as MU beamformer | 26.7 (HE sounding operation(#2388)) | HEM6.4:M HEM6.5:M | Yes ☐ No ☐ N/A ☐ |
| HEM7.4 | HE Sounding Protocol as MU beamformee | 26.7 (HE sounding operation(#2388)) | HEM6.6:M | Yes ☐ No ☐ N/A ☐ |
| HEM8 | NAV update | 26.2.4 (Updating two NAVs) | | |
| HEM8.1 | Update basic NAV | 26.2.4 (Updating two NAVs) | CFHE:M | Yes ☐ No ☐ N/A ☐ |
| HEM8.2 | Update IntraBSS NAV | 26.2.4 (Updating two NAVs) | CFAP AND CFHE:O CFIndepSTA AND CFHE:M | Yes ☐ No ☐ N/A ☐ |
| HEM9 | OFDMA-based random access | 26.5.4 (UL OFDMA-based random access (UORA)) | CFHE:O | Yes ☐ No ☐ N/A ☐ |
| HEM10 | TWT operation | 26.8 (TWT operation) | CFHE:O | Yes ☐ No ☐ N/A ☐ |
| HEM11 | Quiet time period | | | |
| (M118)*HEM11.1 | Responding AP procedure | | CFAP AND CFHE:O | |

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

### B.4.33.1 HE MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| HEM11.1.1 | QTP AP capability | 26.17.5.1 (General) | HEM11.1:M | Yes ☐ No ☐ N/A ☐ |
| HEM11.1.2 | QTP responding AP procedure | 26.17.5.3 (Responding AP procedure) | HEM11.1:M | Yes ☐ No ☐ N/A ☐ |
| (M118)*HEM11.2 | Requesting STA procedure | | CFSTAof AP AND CFHE:O | |
| HEM11.2.1 | QTP non-AP STA capability | 26.17.5.1 (General) | HEM11.2:M | Yes ☐ No ☐ N/A ☐ |
| HEM11.2.2 | QTP requesting STA procedure | 26.17.5.2 (QTP Requesting STA procedure) | HEM11.2:M | Yes ☐ No ☐ N/A ☐ |
| HEM12 | HE BSS operation in the 6 GHz band | | | |
| HEM12.1 | Scanning in the 6 GHz band | 26.17.2.3 (Scanning in the 6 GHz band) | CFHE6G:O | Yes ☐ No ☐ N/A ☐ |
| HEM12.2 | Out of band discovery | 11.53 (Out-of-band discovery of a 6 GHz BSS(11ax)) | (CF2G4n6G OR CF5Gn6G):O | Yes ☐ No ☐ N/A ☐ |

### B.4.33.2 HE PHY features

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| | Are the following PHY protocol features supported? | | | |
| HEP1 | PHY operating modes | | | |
| HEP1.1 | Operation according to Clause 17, Clause 19, and/or Clause 21 | 27.1.1 (Introduction to the HE PHY) | CFHE5G AND (CFAP OR CFHE80):M | Yes ☐ No ☐ N/A ☐ |
| HEP1.2 | Operation according (#1187)to Clause 19 in the 5 GHz band | 27.1.1 (Introduction to the HE PHY) | CFHE5G AND CFHE20:M | Yes ☐ No ☐ N/A ☐ |
| HEP1.3 | Operation according (#1187)to Clause 19 in the 2.4 GHz band | 27.1.1 (Introduction to the HE PHY) | CFHE2G4:M | Yes ☐ No ☐ N/A ☐ |
| HEP1.4 | Operation according to Clause 17 in the 6 GHz band | 27.1.1 (Introduction to the HE PHY) | CFHE6G:M | Yes ☐ No ☐ N/A ☐ |
| HEP2 | HE PPDU format | 27.1.4 (PPDU formats) | | |
| *HEP2.1 | HE SU PPDU | 27.1.4 (PPDU formats) | CFHE:M | Yes ☐ No ☐ N/A ☐ |
| *HEP2.2 | HE ER SU PPDU | 27.1.4 (PPDU formats) | CFHE:M | Yes ☐ No ☐ N/A ☐ |

### B.4.33.2 HE PHY features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| HEP2.3 | HE MU PPDU | 27.1.4 (PPDU formats) | | |
| *HEP2.3.1 | DL OFDMA Tx | 27.3.1.1 (MU transmission) | CFAP AND CFHE:M | Yes ☐ No ☐ N/A ☐ |
| *HEP2.3.2 | DL OFDMA Rx | 27.3.1.1 (MU transmission) | CFSTAofAP AND CFHE:M | Yes ☐ No ☐ N/A ☐ |
| *HEP2.3.3 | DL MU-MIMO Tx | 27.3.1.1 (MU transmission) | CFAP AND HEP9.1.10:M | Yes ☐ No ☐ N/A ☐ |
| *HEP2.3.4 | DL MU-MIMO Rx | 27.3.1.1 (MU transmission) | CFSTAofAP AND CFHE:M | Yes ☐ No ☐ N/A ☐ |
| *HEP2.3.5 | DL MU-MIMO within OFDMA Tx | 27.3.1.1 (MU transmission) | CFAP AND CFHE:O | Yes ☐ No ☐ N/A ☐ |
| *HEP2.3.6 | DL MU-MIMO within OFDMA Rx | 27.3.1.1 (MU transmission) | CFSTAofAP AND CFHE:O | Yes ☐ No ☐ N/A ☐ |
| HEP2.3.7 | Rx full BW with a single user using HE MU PPDU with compressed HE-SIG-B field | 26.15.2 (PPDU format selection) | CFHE:O | Yes ☐ No ☐ N/A ☐ |
| HEP2.3.8 | Rx full BW with a single user using HE MU PPDU with noncompressed HE-SIG-B field | 26.15.2 (PPDU format selection) | CFHE:O | Yes ☐ No ☐ N/A ☐ |
| HEP2.4 | HE TB PPDU | 27.1.4 (PPDU formats) | | |
| HEP2.4.1 | UL OFDMA Tx | 27.3.1.1 (MU transmission) | CFSTAofAP AND CFHE:M | Yes ☐ No ☐ N/A ☐ |
| HEP2.4.2 | UL OFDMA Rx | 27.3.1.1 (MU transmission) | CFAP AND CFHE:M | Yes ☐ No ☐ N/A ☐ |
| *HEP2.4.3 | UL MU-MIMO Tx | 27.3.1.1 (MU transmission) | CFSTAofAP AND CFHE:O | Yes ☐ No ☐ N/A ☐ |
| *HEP2.4.4 | UL MU-MIMO Rx | 27.3.1.1 (MU transmission) | CFAP AND CFHE:O | Yes ☐ No ☐ N/A ☐ |
| HEP2.4.5 | UL MU-MIMO within OFDMA Tx | 27.3.1.1 (MU transmission) | CFSTAofAP AND CFHE:O | Yes ☐ No ☐ N/A ☐ |
| HEP2.4.6 | UL MU-MIMO within OFDMA Rx | 27.3.1.1 (MU transmission) | CFAP AND CFHE:O | Yes ☐ No ☐ N/A ☐ |
| HEP3 | BSS bandwidth | | | |
| *HEP3.1 | 20 MHz operation | 26.17 (HE BSS operation) | CFHE:M | Yes ☐ No ☐ N/A ☐ |
| *HEP3.2 | 40 MHz operation | 26.17 (HE BSS operation) | CFHE80 AND (CFHE5G OR CFHE6G):M<br><br>CFHE2G4:O | Yes ☐ No ☐ N/A ☐ |
| *HEP3.3 | 80 MHz operation | 26.17 (HE BSS operation) | CFHE80 AND (CFHE5G OR CFHE6G):M | Yes ☐ No ☐ N/A ☐ |
| *HEP3.4 | 160 MHz operation | 26.17 (HE BSS operation) | CFHE80 AND (CFHE5G OR CFHE6G):O HEP3.5:M | Yes ☐ No ☐ N/A ☐ |

### B.4.33.2 HE PHY features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| *HEP3.5 | 80+80 MHz operation | 26.17 (HE BSS operation) | CFHE80 AND (CFHE5G OR CFHE6G):O | Yes ☐ No ☐ N/A ☐ |
| HEP4 | PHY timing information | | | |
| HEP4.1 | Values in 20 MHz channel | 27.3.9 (Timing-related parameters) | CFHE:M | Yes ☐ No ☐ N/A ☐ |
| HEP4.2 | Values in 40 MHz channel | 27.3.9 (Timing-related parameters) | CFHE:M | Yes ☐ No ☐ N/A ☐ |
| HEP4.3 | Values in 80 MHz channel | 27.3.9 (Timing-related parameters) | CFHE:M | Yes ☐ No ☐ N/A ☐ |
| HEP4.4 | Values in 160 MHz channel | 27.3.9 (Timing-related parameters) | HEP3.4:M | Yes ☐ No ☐ N/A ☐ |
| HEP4.5 | Values in 80+80 MHz channel | 27.3.9 (Timing-related parameters) | HEP3.5:M | Yes ☐ No ☐ N/A ☐ |
| HEP5 | STBC | 27.3.12.12 (Space-time block coding) | CFHE:O | Yes ☐ No ☐ N/A ☐ |
| HEP6 | Tone allocation | | | |
| *HEP6.1 | 26-tone RU mapping | 27.3.2.2 (Resource unit, guard, and DC subcarriers), 27.3.2.3 (Null subcarriers), and 27.3.2.4 (Pilot subcarriers) | CFHE:M | Yes ☐ No ☐ N/A ☐ |
| *HEP6.2 | 52-tone RU mapping | 27.3.2.2 (Resource unit, guard, and DC subcarriers), 27.3.2.3 (Null subcarriers), and 27.3.2.4 (Pilot subcarriers) | CFHE:M | Yes ☐ No ☐ N/A ☐ |

### B.4.34.1 EDMG MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| EDMG-M16.3 | Hybrid beamforming | 10.41.10.2.4 (Hybrid beamforming for SU-MIMO and MU-MIMO) | CFEDMG:O | Yes ☐ No ☐ N/A ☐ |
| *EDMG-M16.4 | Beamforming for asymmetric links | 10.41.10.3 (Beamforming for asymmetric links) | CFEDMG:O | Yes ☐ No ☐ N/A ☐ |
| EDMG-M16.5 | Group beamforming | 10.41.10.4 (Group beamforming) | CFEDMG:O | Yes ☐ No ☐ N/A ☐ |
| EDMG-M16.6 | BRP transmit sector sweep | 10.41.10.5 (BRP transmit sector sweep (BRP TXSS)) | CFEDMG:M | Yes ☐ No ☐ N/A ☐ |
| EDMG-M16.7 | First path beamforming | 10.41.10.6 (First path beamforming training) | CFEDMG:O | Yes ☐ No ☐ N/A ☐ |
| EDMG-M16.8 | Partial sector level sweep | 10.41.6.4 (BRP phase execution), 11.27.1 (Beamformed link maintenance) | CFEDMG:O | Yes ☐ No ☐ N/A ☐ |
| *EDMG-M16.9 | DMG TRN RX only capable | 9.4.2.264 (EDMG Capabilities element(11ay)) | CFEDMG:O | Yes ☐ No ☐ N/A ☐ |
| EDMG-M16.10 | Dual polarization TRN beamforming training | 10.41.10.7 (Dual polarization TRN beamforming training) | CFEDMG:O | Yes ☐ No ☐ N/A ☐ |

### B.4.34.2 EDMG PHY features

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| | Are the following PHY protocol features supported? | | | |
| EDMG-P1 | PHY operating modes | | | |
| EDMG-P1.1 | Operation according to Clause 28(#1188) | Clause 28 (Enhanced directional multi-gigabit (EDMG) PHY specification(11ay)) | CFEDMG:M | Yes ☐ No ☐ N/A ☐ |

### B.4.36.1 WUR MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| WURM2.1 | Signaling of WUR operation in Beacon, Probe Response, (Re)Association Response frames | 9.3.3.2 (Beacon frame format), 9.3.3.6 (Association Response frame format), 9.3.3.8 (Reassociation Response frame format), 9.3.3.10 (Probe Response frame format), 9.4.2.291 (WUR Operation element(11ba)) | (CFWUR AND CFAP):M | Yes ☐ No ☐ N/A ☐ |
| WURM3 | Signaling of WUR mode | 9.4.2.292 (WUR Mode element(11ba)) | CFWUR:M | |
| WURM3.1 | Signaling of WUR mode in WUR Mode Setup, WUR Mode Teardown | 9.6.33.2 (WUR Mode Setup frame format), 9.6.33.3 (WUR Mode Teardown frame format), 9.4.2.292 (WUR Mode element(11ba)) | CFWUR:M | Yes ☐ No ☐ N/A ☐ |
| WURM4 | WUR duty cycle operation | 29.7 (WUR duty cycle operation) | CFWUR:O | Yes ☐ No ☐ N/A ☐ |
| WURM5 | WUR mode setup in WUR power management procedure | 29.8.2 (WUR mode setup) | CFWUR:M | Yes ☐ No ☐ N/A ☐ |
| WURM6 | WUR non-AP STA operation in WUR power management procedure | 29.8.4 (WUR power management operation for a WUR non-AP STA) | (CFWUR AND CFSTAoFAP):M | Yes ☐ No ☐ N/A ☐ |
| WURM7 | WUR AP operation in WUR power management procedure | 29.9 (Wake-up operation) | (CFWUR AND CFAP):M | Yes ☐ No ☐ N/A ☐ |
| WURM8 | Wake-up operation | 29.9 (Wake-up operation) | CFWUR:M | Yes ☐ No ☐ N/A ☐ |
| WURM8.1 | Wake-up operation with a WUR Wake-up frame with a WUR group ID | 29.9 (Wake-up operation) | CFWUR:O | Yes ☐ No ☐ N/A ☐ |
| WURM9 | Protected WUR frames | 29.10 (WUR frame protection) | CFWUR:O | Yes ☐ No ☐ N/A ☐ |

### B.4.36.1 WUR MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| WURM9.1 | (M118)WUR PN update procedure | 9.4.2.294 (WUR PN Update element(11ba)), 29.10.4.3 (WUR PN update procedure) | (CFWUR (#4138)AND WURM9):O | Yes ☐ No ☐ N/A ☐ |
| WURM10 | WUR FDMA operation | 29.11 (WUR FDMA operation) | CFWUR:O | Yes ☐ No ☐ N/A ☐ |
| WURM11 | (M118)WUR discovery | 29.12 (WUR discovery) | CFWUR:O | Yes ☐ No ☐ N/A ☐ |
| WURM12 | WUR Short Wake-up frame operation | 29.9.2 (WUR Short Wake-up frame operation) | CFWUR:O | Yes ☐ No ☐ N/A ☐ |

### B.4.36.2 WUR PHY features

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| | Are the following PHY protocol features supported? | | | |
| WURP1 | PHY operating modes | | | |
| WURP1.1 | Operation according to Clause 17 (Orthogonal frequency division multiplexing (OFDM) PHY specification) | 30.1 (Introduction) | CFWUR:M | Yes ☐ No ☐ N/A ☐ |
| WURP2 | WUR PPDU format | | | |
| WURP2.1 | WUR PPDU with 20 MHz channel width, WUR LDR, and single stream | 30.1 (Introduction), 30.3.2 (WUR Basic PPDU format) | CFWUR:M | Yes ☐ No ☐ N/A ☐ |
| WURP2.2 | WUR preamble | 30.3.9 (WUR preamble) | CFWUR:M | Yes ☐ No ☐ N/A ☐ |
| WURP2.3 | WUR-Data field | 30.3.10 (WUR-Data field) | CFWUR:M | Yes ☐ No ☐ N/A ☐ |
| WURP2.4 | WUR PPDU with WUR HDR | 30.1 (Introduction), 30.3.2 (WUR Basic PPDU format) | (CFWUR AND CFAP):M<br><br>(CFWUR AND CFSTAo-fAP):O | Yes ☐ No ☐ N/A ☐ |

This is an unapproved IEEE Standards Draft, subject to change.

### B.4.36.2 WUR PHY features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| WURP3 | WUR FDMA PPDU | 30.1 (Introduction), 30.3.3 (WUR FDMA PPDU format) | CFWUR:O | Yes ☐ No ☐ N/A ☐ |
| WURP4 | WUR encoding for the Data field | 30.3.10.2 (WUR-Data field for WUR LDR and WUR HDR) | CFWUR:M | Yes ☐ No ☐ N/A ☐ |

## B.4.37 Enhanced positioning (Ranging) features(11az)

### B.4.37.1 EP MAC features

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| | Are the following MAC protocol features supported? | | | |
| EP7 | Passive TB ranging operation | | | |
| EP7.1 | Passive TB ranging sequence | 11.21.6.4.8 (Measurement exchange in passive TB ranging mode(11az)) | CFPTB:M CFHE:O | Yes ☐ No ☐ N/A ☐ |
| EPM1 | EP capability signaling | | | |
| EPM1.1 | EP FTM support advertisement | 11.21.6.2 (FTM capabilities), 11.21.6.3.1 (General) | (CFTB OR CFNTB):M | Yes ☐ No ☐ N/A ☐ |
| EPM1.2 | EP FTM capability negotiation | 11.21.6.3.1 (General) | (CFTB OR CFNTB):M | Yes ☐ No ☐ N/A ☐ |
| EPM1.3 | EP secured MAC operation negotiation | 12.13 (Preassociation security negotiation(11az)), 11.21.6.4.5 (Secure HE-LTF in the TB and non-TB ranging measurement exchange protocol(11az)) | CFPASN:M (CFTB OR CFNTB):M | Yes ☐ No ☐ N/A ☐ |
| EPM2 | TB ranging operation | | | |
| EPM2.1 | TB measurement sequence | 11.21.6.4.3 (TB ranging measurement exchange(11az)) | CFTB:M | Yes ☐ No ☐ N/A ☐ |

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

### B.4.37.1 EP MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| EPM2.2 | Protected LMR exchange in TB ranging exchange | 12.13 (Preassociation security negotiation(11az)), 11.21.6.4.5 (Secure HE-LTF in the TB and non-TB ranging measurement exchange protocol(11az)) | (CFTB AND CFPASN): M CFPSEC:M | Yes ☐ No ☐ N/A ☐ |
| EPM3 | MAC support of PHY security | | | |
| EPM3.1 | SAC exchange for TB operation | 12.13 (Preassociation security negotiation(11az)), 11.21.6.4.5 (Secure HE-LTF in the TB and non-TB ranging measurement exchange protocol(11az)) | CFTB:O CFPSEC:M | Yes ☐ No ☐ N/A ☐ |
| EPM4 | Non-TB ranging operation | | | |
| EPM4.1 | non-TB ranging exchange | 11.21.6.4.4 (Non-TB ranging measurement exchange(11az)) | CFNTB:M | Yes ☐ No ☐ N/A ☐ |
| EPM4.2 | Protected LMR exchange in non-TB ranging exchange | 12.13 (Preassociation security negotiation(11az)), 11.21.6.4.5 (Secure HE-LTF in the TB and non-TB ranging measurement exchange protocol(11az)) | (CFNTB AND CFPASN):M CFPSEC:M | Yes ☐ No ☐ N/A ☐ |
| EPM4.3 | SAC exchange for non-TB ranging operation | 12.13 (Preassociation security negotiation(11az)), 11.21.6.4.5 (Secure HE-LTF in the TB and non-TB ranging measurement exchange protocol(11az)) | CFNTB:O CFPSEC:M | Yes ☐ No ☐ N/A ☐ |
| EPM5 | EDMG/DMG operation | 11.21.6.4.2.2 (DMG general measurement exchange(11az)) | O | Yes ☐ No ☐ |

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

### B.4.37.1 EP MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| EPM5.1 | EDMG/DMG direction measurement as ISTA | 11.21.6.4.2.3 (DMG/EDMG AOA/AOD measurement exchange(11az)) | CFISTA: O | Yes ☐ No ☐ N/A ☐ |
| EPM5.2 | EDMG/DMG direction measurement as RSTA | 11.21.6.4.2.3 (DMG/EDMG AOA/AOD measurement exchange(11az)) | CFRSTA: O | Yes ☐ No ☐ N/A ☐ |
| EPM5.3 | EDMG FTM (#8113)with first arrival path as ISTA | 11.21.6.4.2.6 (DMG first path AWV for EDCA based ranging measurement exchange(11az)) | (CFISTA and EMDG-M16.7): M | Yes ☐ No ☐ N/A ☐ |
| EPM5.4 | EDMG FTM (#8113)with first arrival path as RSTA | 11.21.6.4.2.6 (DMG first path AWV for EDCA based ranging measurement exchange(11az)) | (CFRSTA and EMDG-M16.7): M | Yes ☐ No ☐ N/A ☐ |
| EPM5.5 | EDMG direction measurement with first arrival path as ISTA | 11.21.6.4.2.3 (DMG/EDMG AOA/AOD measurement exchange(11az)) | (CFISTA and EMDG-M16.7): O | Yes ☐ No ☐ N/A ☐ |
| EPM5.6 | EDMG direction measurement with first arrival path as RSTA | 11.21.6.4.2.3 (DMG/EDMG AOA/AOD measurement exchange(11az)) | (CFRSTA and EMDG-M16.7): O | Yes ☐ No ☐ N/A ☐ |
| EPM5.7 | EDMG LOS assessment as ISTA | 11.21.6.4.2.5 (DMG LOS assessment for EDCA based ranging measurement exchange(11az)) | (CFISTA and EMDG-M16.7 and EDMG-M16.10):O | Yes ☐ No ☐ N/A ☐ |
| EPM5.8 | EDMG LOS assessment as RSTA | 11.21.6.4.2.5 (DMG LOS assessment for EDCA based ranging measurement exchange(11az)) | (CFISTA and EMDG-M16.7 and EDMG-M16.10):O | Yes ☐ No ☐ N/A ☐ |
| EPM6 | Secure EDMG FTM operation | 11.21.6.4.8 (Measurement exchange in passive TB ranging mode(11az)) | (CFEDMG and (CFISTA or CFRSTA) and EPP4 and EPM1.3): | Yes ☐ No ☐ N/A ☐ |

### B.4.37.2 EP PHY features

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| | Are the following PHY protocol features supported? | | | |
| EPP1 | EP TB and non-TB measurement exchange waveforms | 27.3 (HE PHY) | | |
| EPP1.1 | HE ranging NDP | 27.3.19.1 (HE Ranging NDP(11az)) | (CFTB OR CFNTB OR CFPTB):M | Yes ☐ No ☐ N/A ☐ |
| EPP1.2 | HE ranging NDP with secure HE-LTFs | 27.3.19.1 (HE Ranging NDP(11az)) | (CFTB OR CFNTB):M CFPASN:M CFPSEC:M | Yes ☐ No ☐ N/A ☐ |
| EPP1.3 | HE TB ranging NDP | 27.3.19.2 (HE TB Ranging NDP(11az)) | CFTB:M | Yes ☐ No ☐ N/A ☐ |
| EPP1.4 | HE TB ranging NDP with secure HE-LTFs | 27.3.19.2 (HE TB Ranging NDP(11az)) | CFPASN:M CFPSEC:M CFTB:M | Yes ☐ No ☐ N/A ☐ |
| EPP2 | MIMO operation | | | |

### B.4.37.2 EP PHY features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| EPP2.1 | Multi transmit streams | 11.21.6.4.3 (TB ranging measurement exchange(11az)), 11.21.6.4.4 (Non-TB ranging measurement exchange(11az)) | (CFTB or CFNTB):M | Yes ☐ No ☐ N/A ☐ |
| EPP2.2 | Multi receive streams | 11.21.6.4.3 (TB ranging measurement exchange(11az)), 11.21.6.4.4 (Non-TB ranging measurement exchange(11az)) | (CFTB or CFNTB):M | Yes ☐ No ☐ N/A ☐ |
| EPP3 | EDMG frame formats | | | |
| EPP4 | Secure ranging EDMG TRN field | 28.9.3.5 (TRN field definition with Secure TRN subfields(11az)), 28.9.3.6 (Secure TRN subfield definition for EDMG secure ranging PPDU(11az)), 28.9.3.7 (Transmission of an EDMG secure ranging PPDU(11az)) | | Yes ☐ No ☐ N/A ☐ |

## B.4.38 NGV features(11bd)

### B.4.38.1 NGV MAC features

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| | Are the following MAC protocol features supported? | | | |
| NGVM1 | Operating band | | | |
| NGVM1.1 | NGV operation in the 5.9 GHz band | 31.2 (Operation in the 5.9 GHz band) | CFNGV:M | Yes ☐ No ☐ N/A ☐ |

Copyright © 2024 IEEE. All rights reserved.
This is an unapproved IEEE Standards Draft, subject to change.

### B.4.38.1 NGV MAC features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| NGVM1.2 | NGV operation in the 60 GHz band | 31.3 (Operation in the 60 GHz band) | CFNGV60:M | Yes ☐ No ☐ N/A ☐ |
| NGVM2 | NGV fallback procedure | | | |
| NGVM2.1 | 20 MHz transmission fallback to 10 MHz | 31.2.2 (Channel access and transmission methods for 20 MHz OCB transmission) | CFNGV:O | Yes ☐ No ☐ N/A ☐ |
| NGVM3 | DMG operation | | | |
| NGVM3.1 | DMG OCB element | 9.4.2.310 (DMG OCB element(11bd)) | CFNGV60:M | Yes ☐ No ☐ N/A ☐ |
| NGVM3.2 | DMG beamforming outside the context of a BSS | 31.3.1 (DMG beamforming outside the context of a BSS) | CFNGV60:M | Yes ☐ No ☐ N/A ☐ |
| NGVM4 | NGV ranging | | | |
| NGVM4.1 | Support for NGV ranging | 31.4 (NGV ranging) | CFNGV:O | Yes ☐ No ☐ N/A ☐ |
| *NGVM4.2 | Support for NGV ranging in the 5.9 GHz frequency band | 31.4 (NGV ranging) | (CFNGV AND CFNTB):O | Yes ☐ No ☐ N/A ☐ |

### B.4.38.2 NGV PHY features

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| | Are the following PHY protocol features supported? | | | |
| NGVP1 | Operating bandwidth | | | |
| *NGVP1.1 | 10 MHz operation in the 5.9 GHz band | 32.5 (Parameters for NGV-MCSs) | CFNGV:M | Yes ☐ No ☐ N/A ☐ |
| *NGVP1.2 | 20 MHz operation in the 5.9 GHz band | 32.5 (Parameters for NGV-MCSs) | CFNGV:O | Yes ☐ No ☐ N/A ☐ |

Copyright © 2024 IEEE. All rights reserved.

### B.4.38.2 NGV PHY features *(continued)*

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| NGVP2 | Modulation and coding schemes (MCS) | | | |
| NGVP2.1 | NGV-MCS with Index = 0–8, or 15 and 10 MHz and $N_{SS}$ = 1 | 32.5 (Parameters for NGV-MCSs) | NGVP1.1:M | Yes ☐ No ☐ N/A ☐ |
| NGVP2.2 | NGV-MCS with Index = 0–8 and 10 MHz and $N_{SS}$ = 2 | 32.5 (Parameters for NGV-MCSs) | NGVP1.1:O | Yes ☐ No ☐ N/A ☐ |
| NGVP2.3 | NGV-MCS with Index = 0–9, or 15 and 20 MHz and $N_{SS}$ = 1 | 32.5 (Parameters for NGV-MCSs) | NGVP1.2:M | Yes ☐ No ☐ N/A ☐ |
| NGVP2.4 | NGV-MCS with Index = 0–9 and 20 MHz and $N_{SS}$ = 2 | 32.5 (Parameters for NGV-MCSs) | NGVP1.2:O | Yes ☐ No ☐ N/A ☐ |
| NGVP3 | Transmit spectrum masks | | | |
| NGVP3.1 | Spectrum mask, Class A (10 MHz channel spacing) | D.2.3 (Transmit spectrum mask) | CFNGV:O | Yes ☐ No ☐ N/A ☐ |
| NGVP3.2 | Spectrum mask, Class B (10 MHz channel spacing) | D.2.3 (Transmit spectrum mask) | CFNGV:O | Yes ☐ No ☐ N/A ☐ |
| NGVP3.3 | Spectrum mask, Class C (10 MHz channel spacing) | D.2.3 (Transmit spectrum mask) | NGVP1.1:M | Yes ☐ No ☐ N/A ☐ |
| NGVP3.4 | Spectrum mask C2, Class C (20 MHz channel spacing) | D.2.3 (Transmit spectrum mask) | NGVP1.2:M | Yes ☐ No ☐ N/A ☐ |
| NGVP3.5 | Spectrum mask, Class D (10 MHz channel spacing) | D.2.3 (Transmit spectrum mask) | CFNGV:O | Yes ☐ No ☐ N/A ☐ |
| NGVP4 | NGV PPDU format | | | |
| NGVP4.1 | Midambles | 32.3 (NGV PHY) | CFNGV:M | Yes ☐ No ☐ N/A ☐ |
| NGVP4.2 | LDPC support | 32.3 (NGV PHY) | CFNGV:M | Yes ☐ No ☐ N/A ☐ |
| NGVP4.3 | NGV ranging NDP | 31.4 (NGV ranging) | NGVM4.2:M | Yes ☐ No ☐ N/A ☐ |

### B.4.38.3 NGV extended MAC service features

| Item | Feature | References | Status | Support |
|---|---|---|---|---|
| | Are the following NGV extended MAC service features supported? | | | |
| NGVE1 | NGV extended MAC service features | | | |
| NGVE1.1 | NGV extended MAC service features-MLME; 5.9 GHz band (MLME-CANCELTX)(#7073) | 10.2.3.2 (HCF contention based channel access (EDCA)), 6.5.26 (Cancel transmissions of MSDUs(11bd)((#7067))(#7067) | | |
| NGVE1.2 | NGV extended MAC service features—MLME; DMG (MLME-DMG-OCB-START, MLME-DMG-OCB-STOP, MLME-OCB-DMGDISCOVERY, MLME-OCB-LINKSTATUS) | 11.1.4 (Acquiring synchronization, scanning), 11.27 (DMG beamformed link and BSS maintenance) | CFNGV60:M | Yes ☐ No ☐ N/A ☐ |

## B.4.39 Light communications (LC) features(11bb)

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| | Are the following PHY protocol features supported? | | | |
| LCP1 | LC PHY level of support | | | |
| *LCP1.1 | LC PHY with HT support | 33.2.1 (General) | CFHT5G: O.1 | Yes □ No □ N/A □ |
| *LCP1.2 | LC PHY with VHT support | 33.2.1 (General) | CFVHT: O.1 | Yes □ No □ N/A □ |
| *LCP1.3 | LC PHY with HE support | 33.2.1 (General) | CFHE5G OR CFHE6G: O.1 | Yes □ No □ N/A □ |
| LCP3 | Channel numbering and channelization | 33.2.3.4 (Channel numbering) | | |
| LCP3.1 | 5 GHz band mapping | 33.2.3.4 (Channel numbering) | CFLC: O.2 | Yes □ No □ N/A □ |
| LCP3.2 | 6 GHz band mapping | 33.2.3.4 (Channel numbering) | CFLC: O.2 | Yes □ No □ N/A □ |
| LCP4 | Multiple transmit and receive chains | 33.2.3.5 (Multiple transmit chains and multiple receive chains) | | |
| LCP4.1 | More than one transmit chain | 33.2.3.5 (Multiple transmit chains and multiple receive chains) | CFLC: O | Yes □ No □ N/A □ |
| LCP4.2 | More than one receive chain | 33.2.3.5 (Multiple transmit chains and multiple receive chains) | CFLC: O | Yes □ No □ N/A □ |
| LCP5 | LC CCA requirements | 33.2.3.7.1 (CCA requirements) | CFLC: M | Yes □ No □ N/A □ |
| LCP6 | LC repetition mechanism | 33.2.3.7.2 (LC repetition) | CFLC: O | Yes □ No □ N/A □ |

### B.4.39 Enhanced Broadcast Services (EBCS) features(11bc)

| Item | Protocol capability | References | Status | Support |
|---|---|---|---|---|
| *EBCS1 | EBCS downlink procedure | 34.3 (EBCS DL procedures) | CFEBCS:O.1 CFSTARXOnly: M | Yes ☐ No ☐ N/A ☐ |
| EBCS1.1 | EBCS Info frame | 9.6.7.54 (EBCS Info frame format(11bc)) | EBCS1:M | Yes ☐ No ☐ N/A ☐ |
| *EBCS2 | EBCS uplink procedure | 34.4 (EBCS UL procedure) | CFEBCS:O.1 | Yes ☐ No ☐ N/A ☐ |
| EBCS2.1 | EBCS UL frame | 9.6.7.53 (EBCS UL frame format(11bc)) | EBCS2:M | Yes ☐ No ☐ N/A ☐ |
| *EBCS3 | Frame authentication for EBCS | 12.15 (Frame authentication for EBCS(11bc)) | CFEBCS:M | Yes ☐ No ☐ N/A ☐ |
| *EBCS3.1 | PKFA | 12.15.2 (EBCS public key frame authentication (PKFA)) | EBCS1 AND EBCS3:O.2 EBCS2 AND EBCS3:O.3 | Yes ☐ No ☐ N/A ☐ |
| EBCS3.1.1 | PKFA MPDU | 12.15.3 (EBCS hash chain frame authentication (HCFA)) | EBCS3.1: M | Yes ☐ No ☐ N/A ☐ |
| *EBCS3.2 | HCFA | 12.15.3 (EBCS hash chain frame authentication (HCFA)) | EBCS1 AND EBCS3: O.2 | Yes ☐ No ☐ N/A ☐ |
| EBCS3.2.1 | HCFA MPDU | 12.15.3.3 (HCFA MPDU) | EBCS3.2: M | Yes ☐ No ☐ N/A ☐ |
| EBCS3.3 | HLSA | 12.15.4 (No frame authentication with mandatory higher layer source authentication (HLSA)) | EBCS1 AND EBCS3: O.2 EBCS2 AND EBCS3: O.3 | Yes ☐ No ☐ N/A ☐ |

# Annex C

(normative)

# ASN.1 encoding of the MAC and PHY MIB

## C.1 General

The MIB for the current revision of IEEE Std 802.11 is available online at the following URL: http://www.ieee802.org/11/802.11mib.txt. The MAC and PHY MIBs are described in Abstract Syntax Notation One (ASN.1), defined in ISO/IEC 8824-1:1995, ISO/IEC 8824-2:1995, ISO/IEC 8824-3:1995 and ISO/IEC 8824-4:1995, (#4112)and as adapted per Structure of Management Information Version 2 (SMIv2) specified in IETF RFC 2578.

NOTE 1—An external management entity is a component that is beyond the scope of this standard. The SME is not an external management entity.

(#3504)NOTE 2—Certain MIB attributes for a TDLS STA only apply to the link with the AP.

***-- Editor Note: Any <year> below will be replaced by the year of publication by the IEEE SA publication editor.***

## C.2 Guidelines for IEEE 802.11 MIB authors/editors

The MIB may be compiled using the "smitools" package from the Institute of Operating Systems and Computer Networks at the Technical University of Braunschweig, Germany. These tools may be accessed online using the following URL: http://www.ibr.cs.tu-bs.de/bin/smitools.cgi.

Using this tool, the MIB should compile without generating warnings of severity 3 or lower.

Specific points that authors and editors should pay attention to:

- The MIB should compile as specified above prior to submission to IEEE SA RevCom.
- Use only the 7-bit US-ASCII character-set. In particular, use only straight single and double quotes.
- Do not use symbols such as <greek-mu> in units, instead spell out the units fully, i.e., "microseconds."
- Follow the guidelines for writing MIB modules in http://www.rfc-editor.org/rfc/rfc4181.txt (including any updates thereto).
- Pay attention to IETF recommendations on object types.
- When adding a lot of new objects, consider adding a new module.
- Consider seeking advice from an IETF MIB Doctor when creating significant new material. The IEEE has an arrangement with the IETF whereby the IEEE may ask for a MIB Advisor from the IETF MIB Doctors.
- When an object is deprecated, add a line to the Description indicating why (IETF convention).

dot11StationConfigEntry OBJECT-TYPE
   SYNTAX Dot11StationConfigEntry
   MAX-ACCESS not-accessible
   STATUS current
   DESCRIPTION
      "An entry in the dot11StationConfigTable. It is possible for there to be
      multiple IEEE 802.11 interfaces on one agent, each with its unique MAC
      address. The relationship between an IEEE 802.11 interface and an
      interface in the context of the Internet-standard MIB is one-to-one. As
      such, the value of an ifIndex object instance can be directly used to
      identify corresponding instances of the objects defined herein.

      ifIndex - Each IEEE 802.11 interface is represented by an ifEntry.
      Interface tables in this MIB module are indexed by ifIndex."

dot11StationID OBJECT-TYPE
   SYNTAX MacAddress
   MAX-ACCESS read-write
   STATUS current
   DESCRIPTION
      "This is a control variable.
      It is written by the SME or external management entity.
      Changes take effect for the next MLME-START.request primitive.

      The purpose of dot11StationID is to allow a manager to identify a station
      for its own purposes. This attribute provides for that eventuality while
      keeping the true MAC address independent. Its syntax is MAC address, and
      the default value is the STA's assigned, unique MAC address."

   DESCRIPTION
      "Deprecated as the related feature has been removed from IEEE Std 802.11.
      This is a control variable.
      It is written by an external management entity.
      Changes take effect as soon as practical in the implementation."
   DEFVAL { 100 }
   ::= { dot11StationConfigEntry 2 }

dot11CFPollable OBJECT-TYPE
   SYNTAX TruthValue
   MAX-ACCESS read-only
   STATUS deprecated
   DESCRIPTION
      "Deprecated as the related feature has been removed from IEEE Std 802.11.
      This is a capability variable.
      Its value is determined by (#3375)STA capabilities.

      When this attribute is true, it indicates that the STA is able to respond
      to a CF-Poll with a Data frame within a SIFS. This attribute is false if
      the STA is not able to respond to a CF-Poll with a Data frame within a
      SIFS."

```
    STATUS deprecated
    DESCRIPTION
        "Deprecated as the related feature has been removed from IEEE Std 802.11.
        This is a status variable.
        In an AP, it is written by the MAC when it receives an MLME-START.request
        primitive.
        In a non-AP STA, it is written by the MAC when it receives an updated CF
        Parameter Set in a Beacon frame.

        The attribute describes the number of DTIM intervals between the start of
        CFPs. It is modified by MLME-START.request primitive."

    SYNTAX Unsigned32 (0..65535)
    UNITS "TUs"
    MAX-ACCESS read-only
    STATUS deprecated
    DESCRIPTION
        "Deprecated as the related feature has been removed from IEEE Std 802.11.
        This is a status variable.
        In an AP, it is written by the MAC when it receives an MLME-START.request
        primitive.
        In a non-AP STA, it is written by the MAC when it receives an updated CF
        Parameter Set in a Beacon frame.

        The attribute describes the maximum duration of the CFP that may be
        generated by the PCF. It is modified by MLME-START.request primitive."
    ::= { dot11StationConfigEntry 5 }

dot11AuthenticationResponseTimeout OBJECT-TYPE
    SYNTAX Unsigned32 (1..4294967295)
    MAX-ACCESS read-write
    STATUS deprecated
    DESCRIPTION
        "Deprecated, as redundant in purpose with the AuthenticateFailureTimeout
        parameter provided in an MLME-AUTHENTICATE.request.
        This is a control variable.
        It is written by an external management entity.
        Changes take effect for the next Authentication frame.

        This attribute specifies the number of time units (TUs) that a responding
        STA should wait for the next frame in the authentication sequence."
    ::= { dot11StationConfigEntry 6 }

dot11PrivacyOptionImplemented OBJECT-TYPE
    SYNTAX TruthValue
    MAX-ACCESS read-only
    STATUS (#3056)deprecated
    DESCRIPTION
        "(#3056)Deprecated because WEP has been removed from (#6318)IEEE Std
        802.11
        This is a capability variable.
        Its value is determined by (#3375)STA capabilities.

        This attribute, when true, indicates that the IEEE 802.11 WEP option is
        implemented."
    ::= { dot11StationConfigEntry 7 }

```
    DESCRIPTION
        "This is a status variable.
        It is written by the MAC when an MLME-POWERMGT.request primitive is
        received.

        This attribute specifies the power management mode of the STA. When equal
        to active, it indicates that the station is not in power save (PS) mode.
        When equal to powersave, it indicates that the station is in power save
        mode. The power management mode is transmitted in all frames according to
        the rules in 9.2.4.1.8 (More Data subfield)."
    ::= { dot11StationConfigEntry 8 }

dot11DesiredSSID OBJECT-TYPE
    SYNTAX OCTET STRING (SIZE(0..32))
    MAX-ACCESS read-write
    STATUS current
    DESCRIPTION
        "This is a control variable.
        It is written by an external management entity.
        Changes take effect for the next MLME-SCAN.request primitive.

        This attribute reflects the service set identifier (SSID) used in the SSID
        parameter of the most recent MLME-SCAN.request primitive. This value may
        be modified by an external management entity and used by the local SME to
        make decisions about the Scanning process."
    ::= { dot11StationConfigEntry 9 }

dot11DesiredBSSType OBJECT-TYPE
    SYNTAX INTEGER { infrastructure(1), independent(2), any(3) }
    MAX-ACCESS read-write
    STATUS current
    DESCRIPTION
        "This is a control variable.
        It is written by an external management entity.
        Changes take effect for the next MLME-SCAN.request primitive.

        This attribute specifies the type of BSS the station uses when scanning
        for a BSS with which to synchronize. This value is used to filter Probe
        Response frames and Beacon frames. When equal to infrastructure, the
        station synchronizes only with a BSS in which the Capability Information
        field has the ESS subfield equal to 1. When equal to independent, the
        station synchronizes only with a BSS whose Capability Information field
        has the IBSS subfield equal to 1. When equal to any, the station may
        synchronize to either type of BSS."
    ::= { dot11StationConfigEntry 10 }

dot11OperationalRateSet OBJECT-TYPE
    SYNTAX OCTET STRING (SIZE(1..126))
    MAX-ACCESS read-only
    STATUS current
    DESCRIPTION
        "This is a status variable.
        It is written by the SME when joining or establishing a BSS.

        This attribute specifies the set of non-HT data rates at which the station
        is able to receive data. Each octet contains a value representing a rate.
        Each rate is within the range 2 to 127, corresponding to data rates in
        increments of 500 kb/s from 1 Mb/s to 63.5 Mb/s, and is supported (as
        indicated in the supported rates table) for receiving data. This value is
        reported in transmitted Beacon, Probe Request, Probe Response, Association
        Request, Association Response, Reassociation Request, and Reassociation
        Response frames, and is used to determine whether a BSS with which the
        station might synchronize is suitable. It is also used when starting a
        BSS, as specified in 6.5.4 (Synchronization)."

    DESCRIPTION
        "(#3056)Deprecated because WEP has been removed from (#6318)IEEE Std
        802.11.
        This is a control variable.
        It is written by an external management entity.
        Changes take effect as soon as practical in the implementation.

        When this attribute is true, the STA does not indicate at the MAC service
        interface received MSDUs that have the Protected Frame subfield of the
        Frame Control field equal to 0. When this attribute is false, the STA may
        accept MSDUs that have the Protected Frame subfield of the Frame Control
        field equal to 0."

    STATUS (#3056)deprecated
    DESCRIPTION
        "(#3056)Deprecated because WEP has been removed from (#6318)IEEE Std
        802.11.
        This is a status variable.
        It is written by the MAC when an ICV error is detected.

        This counter increments when a frame is received with the Protected Frame
        subfield of the Frame Control field equal to 1 and the value of the ICV as
        received in the frame does not match the ICV value that is calculated for
        the contents of the received frame. ICV errors for TKIP are not counted in
        this variable but in dot11RSNAStatsTKIPICVErrors."

        Rekeying the GTK is applicable only to an entity acting in the Authentica-
        tor role. (#1588)When equal to disabled, GTK rekeying is not performed,
        except when requested by a Supplicant. When equal to timeBased, GTK rekey-
        ing is performed at regular time intervals (see dot11RSNAConfigGroupRekey-
        Time). When equal to packetBased, GTK rekeying is performed after a
        certain number of packet transmissions (see dot11RSNAConfigGroupRekeyPack-
        ets). When equal to timepacketBased, GTK rekeying is performed at regular
        time intervals (see dot11RSNAConfigGroupRekeyTime) and also after a cer-
        tain number of packet transmissions (see dot11RSNAConfigGroupRekeyPack-
        ets)."

   DESCRIPTION
      "This is a control variable.
      It is written by an external management entity.
      Changes take effect as soon as practical in the implementation.

      The PSK, for when RSNA in PSK mode is the selected (#3266)AKMP, is
      configured by dot11RSNAConfigPSKValue.

      An alternative manner of setting the PSK uses the password-to-key
      algorithm defined in J.4 (Suggested pass-phrase-to-PSK mapping). This
      variable provides a means to enter a pass-phrase. When this object is
      written, the RSNA entity uses the password-to-key algorithm specified in
      J.4 (Suggested pass-phrase-to-PSK mapping) to derive a preshared and
      populate dot11RSNAConfigPSKValue with this key.

        Changes take effect for the next MLME-START.request primitive or MLME-
        JOIN.request primitive.

        This attribute shall specify the set of MCS at which the station may
        transmit data. Each octet contains a value representing a rate. Each MCS
        shall be within the range 1 to 127, and shall be supported for receiving
        data. This value is reported in transmitted Beacon, Probe Request, Probe
        Response, Association Request, Association Response, Reassociation
        Request, and Reassociation Response frames, and is used to determine
        whether a BSS with which the station might synchronize is suitable. It is
        also used when starting a BSS, as specified in 11.3 (STA authentication
        and association)."

   STATUS current
   DESCRIPTION
      "An entry in the dot11WirelessMgmtOptionsTable. For all Wireless
      Management features, an Activated MIB attribute is used to activate/enable
      or deactivate/disable the corresponding feature. An Implemented MIB
      attribute is used for an optional feature to indicate whether the feature
      is implemented. A mandatory feature does not have a corresponding
      Implemented MIB attribute. It is possible for there to be multiple IEEE
      802.11 interfaces on one agent, each with its unique MAC address. The
      relationship between an IEEE 802.11 interface and an interface in the
      context of the Internet-standard MIB is one-to-one. As such, the value of
      an ifIndex object instance can be directly used to identify corresponding
      instances of the objects defined herein. ifIndex - Each IEEE 802.11
      interface is represented by an ifEntry. Interface tables in this MIB
      module are indexed by ifIndex."

    DESCRIPTION
        "This is a control variable.
        It is written by an external management entity, which sets it to true when
        the external management entity configures dot11STACivicLocation and
        dot11STACivicLocationType.

        It is written by the SME, which sets it to false when an external manage-
        ment entity configures a dot11STALCITable entry.

        Changes take effect as soon as practical in the implementation.
        This attribute, when true, indicates that the station is configured with a
        civic location (civic location is not Unknown). false indicates the sta-
        tion is not configured with an civic location or the configured civic
        Location is set to Unknown (as defined in 9.4.2.20.13 (Location Civic
        report))."

-- ************************************************************************
-- * IEEE 802.11 RM and WNM Interface MIB
-- ************************************************************************

-- * The primary interface to the radio measurements and Wireless
-- * Network Management functions is meant to be real-time information
-- * obtained through the request/response mechanisms of RM and WNM.
-- * A secondary interface to the measurements and management functions
-- * is through retention of information in this MIB. Non-SNMP requests
-- * for information are obtained via object IDs (OIDs) through the NDIS
-- * or wireless interfaces in the operating systems. SNMP requests for
-- * information are obtained via SNMP SETs and GETs (see IETF RFC 1157 [B22]).

-- *  dot11RMRequest and dot11RMReport Usage
-- *
-- * The dot11RMRequest and dot11RMReport portions of the RM MIB
-- * provide access to the Radio Measurement service. By performing
-- * SET operations on the various dot11RMRequest MIB objects,
-- * radio measurements may be initiated directly on the local STA or
-- * on any peer station within the same BSS. Subsequently, by
-- * performing GET operations on the various dot11RMReport MIB
-- * objects the results of the requested measurements may be
-- * retrieved.
-- *
-- * In the diagram below, a radio measurement could be initiated
-- * for STA x by performing a MIB.set operation on the RM MIB of
-- * STA x and specifying the MAC address of STA x in
-- * dot11RMRqstTargetAdd. Additionally, it is possible to have STA x
-- * request a measurement from STA y by performing a MIB.set operation
-- * on the SME MIB of STA x and specifying the MAC address of STA y in
-- * dot11RMRqstTargetAdd. In both cases the result of the measurements
-- * can be retrieved by performing a MIB.get operation on the RM MIB
-- * of STA x upon completion of the measurement.
-- *
-- *
-- *          MIB.Set                                          MIB.Set
-- *             or                                               or
-- *          MIB.Get                                          MIB.Get

```
-- * Measurement Request frame by setting the same
-- * dot11RMRqstToken value into multiple dot11RMRequestEntrys.
-- *
-- * Each row, dot11RMRequestEntry, of the dot11RMRequestTable
-- * provides read-create access for the initiation of a measurement
-- * request. The dot11RMRequestNextIndex object can be used to
-- * determine which is the next available row. Each row corresponding to
-- * one measurement in the sequence is created with a dot11RMRqstRowStatus
-- * equal to notInService. Once the dot11RMRequestEntry(s) have been
-- * created for a desired measurement sequence the corresponding
-- * dot11RMRqstRowStatus(s) objects are set to active to indicate that
-- * the SME can trigger the appropriate MLME primitives. Upon processing
-- * the request, the SME returns the corresponding dot11RMRqstRowStatus(s)
-- * object to notInService and are now available for additional
-- * measurement requests.
-- *
-- * After a radio measurement is complete the RM populates the RMReport
-- * objects with the results of the measurement. Each STA maintains a set
-- * of RMReport tables, one corresponding to each measurement type. The
-- * results of the entire measurement sequence are spread across the tables
-- * based on the type of measurements requested. Each xxxReportEntry
-- * within a xxxReportTable contains a xxxRprtRqstToken that corresponds
-- * to the original dot11RMRqstToken in the measurement request. So the
-- * results of the measurement can be collected by searching the appropriate
-- * xxxReportTables and retrieve any reports with the matching request
-- * token.
-- *
-- * Similar structures and mechanisms are used for WNM
-- * Request and Reports. The WNM MIB definitions follow the RM MIB definitions
-- * in this Annex.

dot11RMRequestNextIndex OBJECT-TYPE
   SYNTAX Unsigned32 (0..65535)
   MAX-ACCESS read-only
   STATUS current
   DESCRIPTION
      "This is a status variable.
      It is written by the SME when able to accept a new request.

      Identifies a hint for the next value of dot11RMRqstIndex to be used in a
      row creation attempt for dot11RMRequestTable. If no new rows can be
      created for some reason, such as memory, processing requirements, etc.,
      the SME sets this attribute to 0. It updates this attribute to a proper
      value other than 0 as soon as it is capable of receiving new measurement
      requests. The nextIndex is not necessarily sequential nor monotonically
      increasing."

```
    SYNTAX SEQUENCE OF Dot11RMRequestEntry
    MAX-ACCESS not-accessible
    STATUS current
    DESCRIPTION
        "This group contains the current list of requests for RM reports to be
        issued and have been issued until removed. A network manager adds an RM
        request by creating a row with createAndWait row status and then filling
        in the request parameters/attributes. The request becomes active to be
        issued when the row status is set to Active. The columnar objects or
        attributes other than the rowStatus are not written if the rowStatus is
        Active. The request rows can be deleted, if commanded by a network manager
        via changing the value of dot11RMRqstRowStatus to Destroy. This may leave
        orphaned rows if a manager crashes and forgets which rows are being used
        by it. One recommended way to manage orphaned or finished rows is to
        delete rows if their dot11RMRqstRowStatus remains other than Active for
        longer than a period (recommend at least 5 minutes, IETF RFC 2579). Or
        another recommended way is to delete older rows as needed based on their
        dot11RMRqstTimeStamp values. This can be done by the agent as well as the
        manager. "

    STATUS current
    DESCRIPTION
        "This is a control variable.
        It is written by an external management entity when the table entry is
        created, i.e., when requesting a measurement..
        Changes take effect when dot11RMRqstRowStatus is set to Active.

        This attribute indicates a unique string to identify a group of rows to be
        issued as parallel or sequential measurements. To guarantee the uniqueness
        of this token across multiple network managers, it is recommended that
        this token be prefixed with the IP address of the network manager creating
        this row. This token is not necessarily equivalent to the measurement
        tokens in RM request frames. If this attribute is an empty string, then
        this row of request is independent from other requests."

    DESCRIPTION
        "This is a control variable.
        It is written by an external management entity when requesting a
        measurement.
        Changes take effect when dot11RMRqstRowStatus is set to Active.

        This attribute indicates when the Noise Histogram Measurement results are
        to be reported to the requesting STA. This attribute is valid only if the
        dot11RMRqstType is 4, indicating a Noise Histogram request, and is ignored
        otherwise."

    DESCRIPTION
        "This is a control variable.
        It is written by an external management entity when requesting a
        measurement.
        Changes take effect when dot11RMRqstRowStatus is set to Active.

        This attribute indicates the noise histogram reporting condition ANPI
        reference value. The measured ANPI is compared to this reference value and
        a report is issued if the indicated reporting condition is satisfied.
        ANPIval = Floor((ANPIpower in dBm + 110)*2), for ANPI in the range -110
        dBm to 0 dBm. ANPIval = 220 for ANPI > 0 dBm. ANPIval = 255 when ANPI is
        not available. This attribute is valid only if the dot11RMRqstType is 4,
        indicating a Noise Histogram request, and is ignored otherwise."

    DESCRIPTION
        "This table contains the current list of Transmit Delay Metrics reports
        that have been received by the MLME. The report tables are maintained as a
        FIFO to preserve freshness, thus the rows in this table can be deleted for
        memory constraints or other implementation constraints determined by the
        vendor. New rows have different RprtIndex values than those deleted within
        the range limitation of the index. One easy way is to increment RprtIndex
        for new reports being written in the table."

    STATUS current
    DESCRIPTION
        "Identifies the next available index for managing the neighbor report
        table. If this attribute is 0, it indicates that the neighbor report
        feature is not configurable via SNMP, or the table is full and new rows
        cannot be accepted."
    ::= { dot11RMConfig 2 }

dot11RMNeighborReportTable OBJECT-TYPE
    SYNTAX SEQUENCE OF Dot11RMNeighborReportEntry
    MAX-ACCESS not-accessible
    STATUS current
    DESCRIPTION
    "This table contains pertinent information on a collection of BSSIDs that are
        candidates to which STAs can roam. The rows are created using
        createAndWait method and fill in the attributes. When the rowStatus is set
        to active, the row can be included in Neighbor Report elements. If there
        is an error, the rowStatus is set to notReady by SME. Since this table
        contains all Neighbor Report element entries for all interfaces enabled
        with the neighbor report feature, it is possible to have too many entries
        for one interface, while still remaining under the MaxTableSize. In that
        situation, SME includes neighbor report entries only with lower
        dot11RMNeighborReportIFIndex up to the maximum possible number of entries
        for a particular interface identified by ifIndex. SME sets the rowStatus
        to notInService for those rows that cannot be included in the Neighbor
        Report element for that interface."

dot11WNMRequestNextIndex OBJECT-TYPE
   SYNTAX Unsigned32 (0..4294967295)
   MAX-ACCESS read-only
   STATUS current
   DESCRIPTION
      "This is a status variable.
      It is written by the SME when able to accept a new request.

      Identifies a hint for the next value of dot11WNMRqstIndex to be used in a
      row creation attempt for dot11WNMRequestTable. If no new rows can be
      created for some reason, such as memory, processing requirements, etc, the
      SME shall set this attribute to 0. It shall update this attribute to a
      proper value other than 0 as soon as it is capable of receiving new
      measurement requests. The nextIndex is not necessarily sequential nor
      monotonically increasing."

```
    SYNTAX SEQUENCE OF Dot11WNMRequestEntry
    MAX-ACCESS not-accessible
    STATUS current
    DESCRIPTION
        "This group contains the current list of requests for WNM reports to be
        issued and have been issued until removed. A network manager adds a WNM
        request by creating a row with createAndWait row status and then filling
        in the request parameters/attributes. The request becomes active to be
        issued when the row status is set to Active. The columnar objects or
        attributes other than the rowStatus shall not be written if the rowStatus
        is Active. The request rows can be deleted, if commanded by a network
        manager via changing the value of dot11WNMRqstRowStatus to Destroy. This
        may leave orphaned rows if a manager crashes and forgets which rows are
        being used by it. One recommended way to manage orphaned or finished rows
        is to delete rows if their dot11WNMRqstRowStatus remains other than Active
        for longer than a period (recommend at least 5 minutes, IETF RFC 2579). Or
        another recommended way is to delete older rows as needed based on their
        dot11WNMRqstTimeStamp values. This can be done by the agent as well as the
        manager."

    DESCRIPTION
        "This is a control variable.
        It is written by an external management entity when requesting a
        measurement, and by the SME when accepting a management request.

        The Row Status column of the current row, used for tracking status of an
        individual request. When this attribute is set to Active, AND a
        measurement request can be unambiguously created based on the parameters
        in the row, then the MLME may proceed to issue the request to its intended
        targets when appropriate. If not, this attribute may be set to Not-ready
        immediately to indicate parametric errors. However, it is the network
        managers
        responsibility to correct the error. If the request is successfully issued
        to the target STA, then the rowStatus is set to notInService."

    DESCRIPTION
        "Group contains the current list of (#2210)Colocated Interference reports
        that have been received by the MLME. The report tables shall be maintained
        as FIFO to preserve freshness, thus the rows in this table can be deleted
        for memory constraints or other implementation constraints determined by
        the vendor. New rows shall have different RprtIndex values than those
        deleted within the range limitation of the index. One easy way is to
        increment RprtIndex for new reports being written in the table."

    SYNTAX Integer32 (-128..127)
    UNITS "dBm"
    MAX-ACCESS read-only
    STATUS current
    DESCRIPTION
        "This is a status variable.
        It is written by the SME when a management report is completed.

        This attribute indicates the maximum level of the (#2210)colocated
        interference power in units of dBm over all receive chains averaged over a
        4 s period during an interference period and across interference
        bandwidth. When the interference level is unknown, the field is set to
        +127 dBm. When the interference level is equal or greater than 126 dBm,
        the field is set to +126 dBm. If no (#2210)colocated interference is
        present the field is set to -128 dBm. When the interference level is equal
        or lower than -127 dBm, the field is set to -127 dBm. The interference
        level is referenced to the antenna connector (see definition in Clause 3
        (Definitions, acronyms, and abbreviations)) used for reception, like
        RCPI."

    SYNTAX Integer32
    MAX-ACCESS read-only
    STATUS current
    DESCRIPTION
       "This is a status variable.
       It is written by the SME when a management report is completed.

       This attribute contains the least significant 4 octets (i.e., B0-B31) of
       the TSF timer at the start of the interference burst. When either the
       Interference Interval or the Interference Burst Length fields are set to
       2^32-1, this field indicates the average duty cycle. The average duty
       cycle value is defined as Floor((2^32-2) * [average interference burst
       length (microsecond)]/[average interference interval (microsecond)] +
       0.5). When the interference is nonperiodic the Interference Start Time
       field is set to 0. If no (#2210)colocated interference is present the
       field is set to 0."

    STATUS current
    DESCRIPTION
        "This is a control variable.
        It is written by an external management entity.
        Changes take effect as soon as practical in the implementation.

        This attribute indicates the number of octets in a PSDU, below which an
        RTS/CTS handshake is not performed if dot11TXOPDurationRTSThreshold is
        1023 or it is not present,(11ax) except as RTS/CTS is used as a cross mod-
        ulation protection mechanism as defined in 10.27 (Protection mechanisms).
        An RTS/CTS handshake is performed at the beginning of any frame exchange
        sequence where the PSDU contains an MPDU with the Type subfield equal to
        Data or Management and an individual address in the Address 1 field, and
        the length of the PSDU is greater than this threshold. Setting this attri-
        bute to be larger than the maximum PSDU size has the effect of turning off
        the RTS/CTS handshake for frames of Data or Management type transmitted by
        this STA. Setting this attribute to 0 has the effect of turning on the
        RTS/CTS handshake for all frames of Data or Management type transmitted by
        this STA."

    DESCRIPTION
        "This is a control variable.
        It is written by an external management entity.
        Changes take effect as soon as practical in the implementation.

        This attribute specifies the maximum size of an individually addressed
        MPDU beyond which the corresponding MSDU or MMPDU is fragmented, except
        when an MSDU is transmitted under an HT-immediate block ack agreement, or
        when an MSDU is carried in an A-MSDU, or when an MSDU or MMPDU is carried
        in an A-MPDU that does not contain a S-MPDU. Fields added to the MPDU by
        security encapsulation are not counted against the limit specified by this
        attribute. An MSDU or MMPDU might be fragmented even if it is smaller."

    DESCRIPTION
        "This is a control variable.
        It is written by an external management entity.
        Changes take effect as soon as practical in the implementation.

        This attribute specifies the value of the minimum size of the window that
        is used by an AP for a particular AC for generating a random number for
        the backoff. The value of this attribute is such that it could always be
        expressed in the form of 2^X - 1, where X is an integer. The default value
        for this attribute is
        aCWmin, if dot11QAPEDCATableIndex is 1 or 2.
        (aCWmin+1)/2 - 1, if dot11QAPEDCATableIndex is 3.
        (aCWmin+1)/4 - 1, if dot11QAPEDCATableIndex is 4."

    STATUS deprecated
            DESCRIPTION
        "Superseded by subband-specific supported operating classes.
        This is a capability variable.
        Its value is determined by (#3375)STA capabilities.

        The capability of the OFDM PHY implementation to operate in the 4.9 GHz
        and 5 GHz bands. Coded as an integer value with bit 0 LSB as follows:
        bit 0 .. capable of operating in the 5.15-5.25 GHz band
        bit 1 .. capable of operating in the 5.25-5.35 GHz band
        bit 2 .. capable of operating in the 5.725-5.825 GHz band
        bit 3 .. capable of operating in the 5.47-5.725 GHz band
        bit 4 .. capable of operating in the lower Japanese (5.15-5.25 GHz) band
        bit 5 .. capable of operating in the 5.03-5.091 GHz band
        bit 6 .. capable of operating in the 4.94-4.99 GHz band
        For example, for an implementation capable of operating in the 5.15-5.35
        GHz bands this attribute would take the value 3."
